PUQ Code Snippets — WHMCS Addon

PUQ Code Snippets is an addon module for WHMCS that lets you inject custom HTML, CSS, and JavaScript code into the client area and admin area pages — without editing any template files. Manage unlimited snippets with a built-in CodeMirror code editor, advanced page/user/product targeting, scheduling, version history with one-click rollback, and an emergency kill switch.

Key Features

- **Unlimited Code Snippets** — create as many snippets as you need, each with its own settings
- **CodeMirror Editor** — syntax-highlighted code editor with HTML/CSS/JS support, code folding, search, auto-close tags and brackets
- **Three Injection Positions** — insert code inside `<head>`, after opening `<body>`, or before closing `</body>`
- **Area Targeting** — target Client Area, Admin Area, or both
- **Page Targeting** — target specific pages with checkboxes for 35+ client area pages and 40+ admin area pages
- **Custom URL Patterns** — target any page by URL pattern matching (if URL contains the pattern, the snippet fires)
- **User Targeting** — show snippets to all visitors, logged-in clients only, guests only, or specific client groups
- **Product/Service Targeting** — show or hide snippets based on client's active products/services

- **Scheduling** — set start and end dates for time-limited snippets (promotions, announcements)
- **Priority System** — control the order in which snippets are rendered
- **Version History** — complete log of all changes with side-by-side diff view
- **One-Click Rollback** — restore any previous version of a snippet instantly
- **Kill Switch** — emergency disable all snippets instantly via database toggle, flag file, or secret URL
- **Import / Export** — export all snippets to JSON, import on another WHMCS instance
- **Dashboard** — overview with key metrics, charts by area and position, recent changes log
- **License system** — online/offline license verification with graceful degradation
- **English language interface**

Use Cases

- **Analytics & Tracking** — Google Analytics, GTM, Meta Pixel, Hotjar, etc.
- **Chat Widgets** — Tawk.to, LiveChat, Crisp, Intercom, etc.
- **Custom CSS** — style overrides, theme tweaks, branding adjustments
- **Banners & Announcements** — promotional banners, maintenance notices, holiday messages
- **Custom JavaScript** — form validation, UI enhancements, integrations
- **SEO Tags** — meta tags, Open Graph, structured data
- **Cookie Consent** — GDPR/cookie consent banners
- **A/B Testing** — inject different code for different user segments

---

System Requirements

Requirement	Minimum
WHMCS	8.x, 9.x
PHP	8.1, 8.2+
ionCube Loader	v13 or newer (v14, v15)
