History

Code Snippets addon **WHMCS**

Order now | Download | FAQ

The History page is available at: **Addons** > **PUQ Code Snippets** > **History** > **All Changes**

It provides a complete audit log of all snippet changes with diff view and one-click rollback.

History Log

The main table displays all recorded changes:

Column	Description
#	Record number
Date	Timestamp of the change
Action	Type of change (see below)
Snippet	Name of the affected snippet
Description	Snippet description at the time of the change
Admin	Administrator who made the change
Actions	View Diff and Rollback buttons

Action Types

Action	Description
Created	A new snippet was created
Updated	An existing snippet was modified
Deleted	A snippet was deleted
Toggled	A snippet was enabled or disabled
Restored	A snippet was rolled back to a previous version
Imported	A snippet was imported from a JSON file

View Diff

Click the **View Diff** button to see a side-by-side comparison of the code before and after the change.

08-history-diff.png

The diff modal shows:

Panel	Description
Before	The snippet code before the change
After	The snippet code after the change

This helps you understand exactly what was changed and review modifications made by other administrators.

Rollback

Click the **Rollback** button to restore a snippet to a previous version. A confirmation dialog appears before the rollback is executed.

The rollback:

- Restores the snippet's code to the version stored in that history record
- Creates a new history entry of type "Restored"
- Does not affect other snippet settings (name, targeting, schedule, etc.)

> **Tip:** Use rollback when a snippet update breaks something — quickly revert to the last known working version.

Max History Entries

The number of history records is configurable in Settings. When the limit is reached, the oldest records are automatically removed. Default: 100 entries.

Revision #2
