Add server

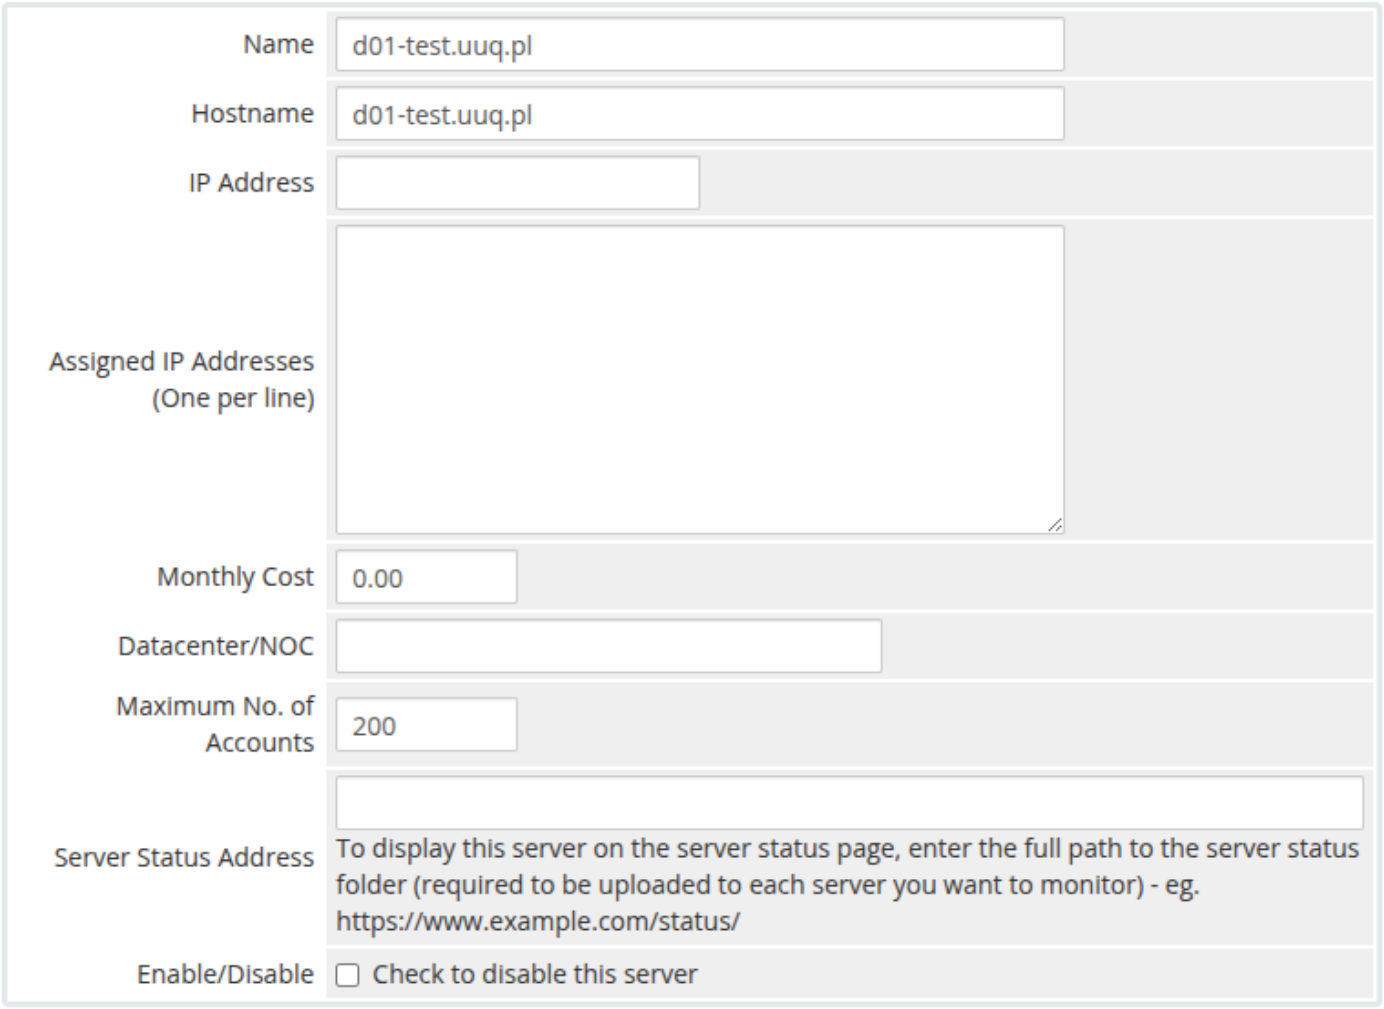
Docker Immich module **WHMCS**

Order now | Download | FAQ | n8n

Add a new server to the system WHMCS.

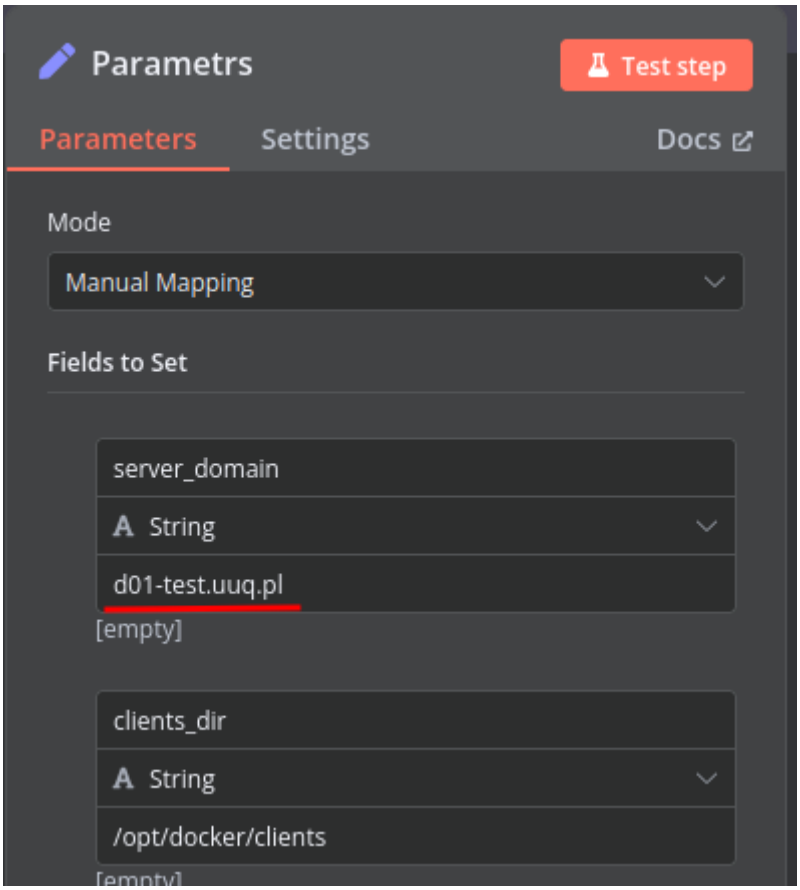
```
System Settings->Servers->Add New Server
```

- Enter the correct **Name** and **Hostname**



Attention: Important Information

The **hostname** field represents the actual domain of the server running Docker and must match the **server_domain** parameter in the **n8n workflow**. If they do not match, communication will not function correctly.
Additionally, this domain must be configured so that all its subdomains resolve to the IP address of the server running Docker.



In the **Server Details** section, select the **"PUQ Docker Immich"** module and enter the correct **username** and **password** for the **API endpoint** in the n8n workflow.

Additionally, in the **Access Hash** field, insert the **URL of the API entry point** for the n8n workflow.

Server Details

Module	PUQ Docker Immich Test Connection ✔ Connection successful. Some values have been auto-filled.
Username	Immich
Password	••••
Access Hash	https://n8n.puqcloud.com/webhook/docker-immich
Secure	☑ Check to use SSL Mode for Connections
