

IP Access Control

Docker Immich module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

In the client area, the client can configure access to their resource by entering allowed IP addresses in the appropriate section on the **Restrict by IP** page.

If no IP addresses are specified, access is open to all IP addresses.

The screenshot shows the PUQcloud client area interface. At the top left is the PUQcloud logo. To the right is a search bar with the text "Search our knowledgebase..." and a shopping cart icon with a "0" notification. Below the logo is a navigation menu with links: Home, Services, Domains, Billing, Support, and Open Ticket. On the far right of the menu is a user greeting: "Hello, ruslan!". Below the navigation is a breadcrumb trail: "Portal Home / Client Area / My Products & Services / Product Details". On the left side, there is a sidebar menu with four items: "Overview" (with a star icon and an upward arrow), "Information" (with an information icon), "Restrict by IP" (with a shield icon and a red border), and "Reinstall" (with a refresh icon). The main content area is titled "IP Access Control" and has a subtitle "If IP is not specified, access is not limited". Below the subtitle is the URL "https://1-5342.d01-test.uuq.pl". There is a label "WEB:" with a person icon next to a large text input field containing the placeholder text "Enter allowed IPs, one per line". At the bottom of the input field is a blue "Save" button. Below the "Save" button is the text "Powered by WHMCompleteSolution".
