# Description

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Before you start, it is important to read and familiarize yourself with the following articles at this link:

<https://doc.puq.info/books/docker-modules>

The **WHMCS Docker MinIO module** is designed for automated provisioning and management of MinIO instances on a Docker server. It seamlessly integrates with WHMCS, allowing businesses to sell and manage MinIO services efficiently.

---

## Key Features

### Automated Container Management

- Automatic creation of an MinIO container upon service order.
- Automated package upgrades and administrator password reset.

### Service Control & Security

- Service creation
- Service suspension and reactivation.
- Service termination
- Full reinstallation
- IP access control

### Advanced Diagnostic Tools

- Built-in tools for diagnosing and managing containers.

## Multilingual Support

- Supports multiple languages, including **Arabic, Azerbaijani, Catalan, Chinese, Croatian, Czech, Danish, Dutch, English, Estonian, Farsi, French, German, Hebrew, Hungarian, Italian, Macedonian, Norwegian, Polish, Romanian, Russian, Spanish, Swedish, Turkish, and Ukrainian.**

## Fully Customizable Workflows

- Uses **n8n workflows** to automate processes, allowing full customization for business-specific needs.
- 

# System Requirements

To run the WHMCS Docker MinIO module, ensure you have:

 **WHMCS version 8+**

 **An n8n server** for workflow automation

 **A server with Docker installed** for container management ([Installation Guide](#))

---

# Installation & Setup

## 1 Environment Preparation

- Install **WHMCS 8+**.
- Set up an **n8n server** for automation workflows.
- Ensure **Docker** is installed and running. ([Installation Guide](#))

## 2 Module Installation

- Upload and activate the **WHMCS Docker MinIO module**.
- Configure the module settings to connect with your Docker server and n8n workflows.

## 3 Workflow Customization

- Utilize **n8n workflows** to automate service provisioning and management.
- Modify workflows as needed for custom business logic.

## 4 Testing & Deployment

- Perform a **test order** to verify automatic container creation.
- Check all service management functions (creation, suspension, unsuspension, termination).

---

# Why Choose This Module?

 **Seamless automation** – Reduces manual work and speeds up service deployment.

 **Highly customizable** – Modify workflows to fit any business model.

 **User-friendly** – Integrated within WHMCS with a simple setup process.

---

This module makes selling and managing **MinIO instances** through WHMCS easy, automated, and flexible!

# What is MinIO

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

**MinIO** is an open-source object storage solution that is fully compatible with Amazon S3. It is designed for storing large amounts of unstructured data such as files, images, videos, backups, and logs. MinIO provides a high-performance alternative to traditional storage solutions, offering scalability, security, and ease of use.

### Key Features of MinIO:

#### 1. **Amazon S3 Compatibility**

MinIO is designed to be fully compatible with the Amazon S3 API. This means that applications that interact with S3 can seamlessly work with MinIO without any changes to the codebase. It provides the same object storage functionality that developers are used to with S3, making it easy to migrate or integrate with existing systems.

#### 2. **High Performance**

MinIO is built for high-performance applications. It is optimized to handle large-scale data and provide fast throughput, making it suitable for storing and serving massive datasets. Its low-latency and high throughput capabilities make it ideal for data-intensive applications like AI/ML workloads, big data storage, and video streaming.

#### 3. **Scalability**

MinIO can scale easily from a single server to a distributed cluster. It supports high availability and can handle petabytes of data across a large number of nodes. Whether you're starting with a small deployment or expanding to a global system, MinIO provides the scalability you need to grow without major reconfiguration.

#### 4. **Security**

Security is a top priority in MinIO. It supports end-to-end encryption, both in transit (using TLS) and at rest (using AES-256 encryption). Access control policies and fine-grained permissions help ensure that only authorized users can access your data. MinIO also supports bucket versioning and data redundancy to protect against data loss.

#### 5. **Simplicity**

MinIO is designed to be simple to deploy and manage. It can be run as a single binary, making it easy to install and configure. It supports Docker and Kubernetes, allowing you to deploy it in containerized environments or cloud-native architectures. Additionally, MinIO's web interface provides a user-friendly way to manage and monitor your storage.

#### 6. **Use Cases**

MinIO is used in a variety of scenarios, including:

- **Cloud Storage:** Build your own private cloud storage solution.
- **Big Data:** Store and manage large datasets for analytics and processing.
- **Backup:** Create reliable, cost-effective backup solutions.
- **AI/ML:** Store training datasets and models for machine learning applications.
- **Media and Streaming:** Serve high-resolution images, videos, and audio files.

## Why Choose MinIO?

MinIO stands out for its simplicity, performance, and compatibility with existing tools and applications. It's an ideal choice for businesses and developers looking to build scalable, secure, and cost-effective object storage solutions. MinIO's open-source nature makes it an affordable alternative to proprietary cloud storage services like Amazon S3, while still offering many of the same features and capabilities.

Whether you're building a new application or migrating an existing system, MinIO offers a powerful and flexible storage solution that can meet your needs as they evolve.

# Changelog

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

v1.0 Released 17-03-2025

# Installation and configuration guide

# Basic concepts and requirements

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Before you start, it is important to read and familiarize yourself with the following articles at this link:

<https://doc.puq.info/books/docker-modules>

The **WHMCS Docker MinIO module** is part of the **WHMCS Docker module series** developed by **PUQcloud**. This module enables service providers to offer **MinIO Docker containers** as a service to their clients, allowing for seamless automation and integration.

The system consists of three core components:

### **WHMCS Module**

The **core component**, installed in WHMCS, manages service provisioning and automation from the WHMCS side.

### **Debian 12 Server**

A server running **Debian 12** with the following pre-installed:

 **Docker** – For container management

We have prepared instructions for installing and configuring Docker

<https://doc.puq.info/books/docker-modules/page/installing-docker-for-puqcloud-modules>

# n8n Server

This server facilitates communication between the WHMCS module and the Docker server, ensuring smooth workflow execution.

To explore n8n's full potential, visit the [official n8n website](#) for documentation, tutorials, and community support.

---

## Key Features & Concepts

### Workflow Automation

n8n provides a **graphical workflow builder**, allowing users to automate various tasks, such as:

- ✓ **Sending notifications**
- ✓ **Configuring firewalls** on external routers
- ✓ **Managing DNS settings**
- ✓ **Custom automation processes** tailored to specific needs

### Flexibility & Customization

The module offers **personalized settings** and supports **elastic automation**, giving clients full control over their n8n workflows.

# WHMCS setup (install/update)

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

**Module is coded ionCube v13**

Supported php version:

- php 7.4 WHMCS 8.11.0 -
- php 8.1 WHMCS 8.11.0 +
- php 8.2 WHMCS 8.11.0 +

To install and update a module, you must perform one and the same action.

### 1. Download the latest version of the module.

PHP 8.2

```
wget http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-MinIO/php82/PUQ_WHMCS-Docker-MinIO-latest.zip
```

PHP 8.1

```
wget http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-MinIO/php81/PUQ_WHMCS-Docker-MinIO-latest.zip
```

PHP 7.4

```
wget http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-MinIO/php74/PUQ_WHMCS-Docker-MinIO-latest.zip
```

All versions are available via link:

[https://download.puqcloud.com/WHMCS/servers/PUQ\\_WHMCS-Docker-MinIO/](https://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-MinIO/)

## 2. Unzip the archive with the module.

```
unzip PUQ_WHMCS-Docker-MinIO-latest.zip
```

## 3. Copy and Replace "puqDockerMinIO" from "PUQ\_WHMCS-Docker-MinIO" to "WHMCS\_WEB\_DIR/modules/servers/"

# Preparing Docker Server

Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

To install the Docker server for this module, please follow the instructions at the following link:

<https://doc.puq.info/books/docker-modules/page/installing-docker-for-puqcloud-modules>

# Setting up n8n workflow

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

## Overview

The **Docker MinIO WHMCS module** uses a specially designed workflow for **n8n** to automate deployment processes. The workflow provides an API interface for the module, receives specific commands, and connects via SSH to a server with Docker installed to perform predefined actions.

## Prerequisites

- You must have your own **n8n** server.
- Alternatively, you can use the official **n8n** cloud installations available at: [n8n Official Site](#)

## Installation Steps

### Install the Required Workflow on n8n

You have two options:

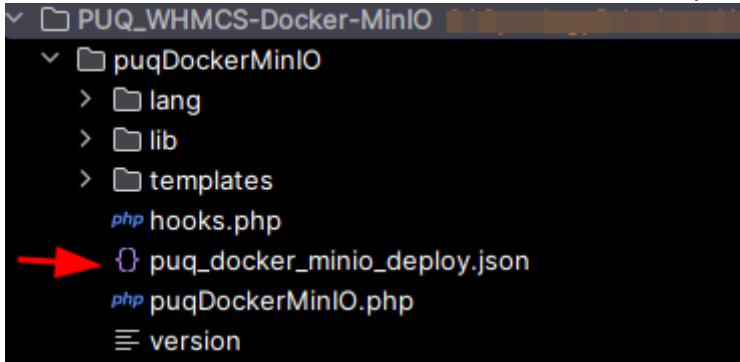

#### **Option 1: Use the Latest Version from the n8n Marketplace**

- The latest workflow templates for our modules are available on the official n8n marketplace.

- Visit our profile to access all available templates: [PUQcloud on n8n](#)

## Option 2: Manual Installation

- Each module version comes with a workflow template file.

- You need to manually import this template into your n8n server.

# n8n Workflow API Backend Setup for WHMCS/WISECP

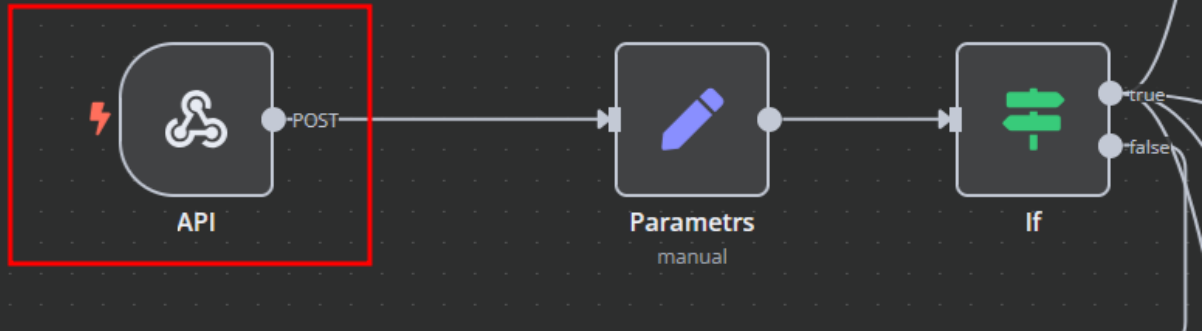

## Configure API Webhook and SSH Access

- Create a **Basic Auth Credential** for the Webhook API Block in n8n.

- screen\_right

## Additional Resources

- Full documentation: <https://doc.puq.info/books/docker-minio-whmcs-module>
- WHMCS module: <https://puqcloud.com/whmcs-module-docker-minio.php>

## nginx

In the **nginx** element, you can modify the configuration parameters of the web interface proxy server.

- The **main** section allows you to add custom parameters to the **server** block in the proxy server configuration file.
- The **main\_location** section contains settings that will be added to the **location /** block of

the proxy server configuration. Here, you can define custom headers and other parameters specific to the root location.

- The **console** section allows you to add custom parameters to the **server** block in the WEB console proxy server configuration file.
- The **console\_location** section contains settings that will be added to the **location** / block of the WEB console proxy server configuration. Here, you can define custom headers and other parameters specific to the root location of WEB console.

```

console\_location

A String

```
= # Custom header
  proxy_set_header Host $http_host;
  proxy_set_header X-Real-IP $remote_addr;
  proxy_set_header X-Forwarded-For $proxy_add_x_forwarded_for;
  proxy_set_header X-Forwarded-Proto $scheme;
  proxy_set_header X-Main-Proxy true;
```

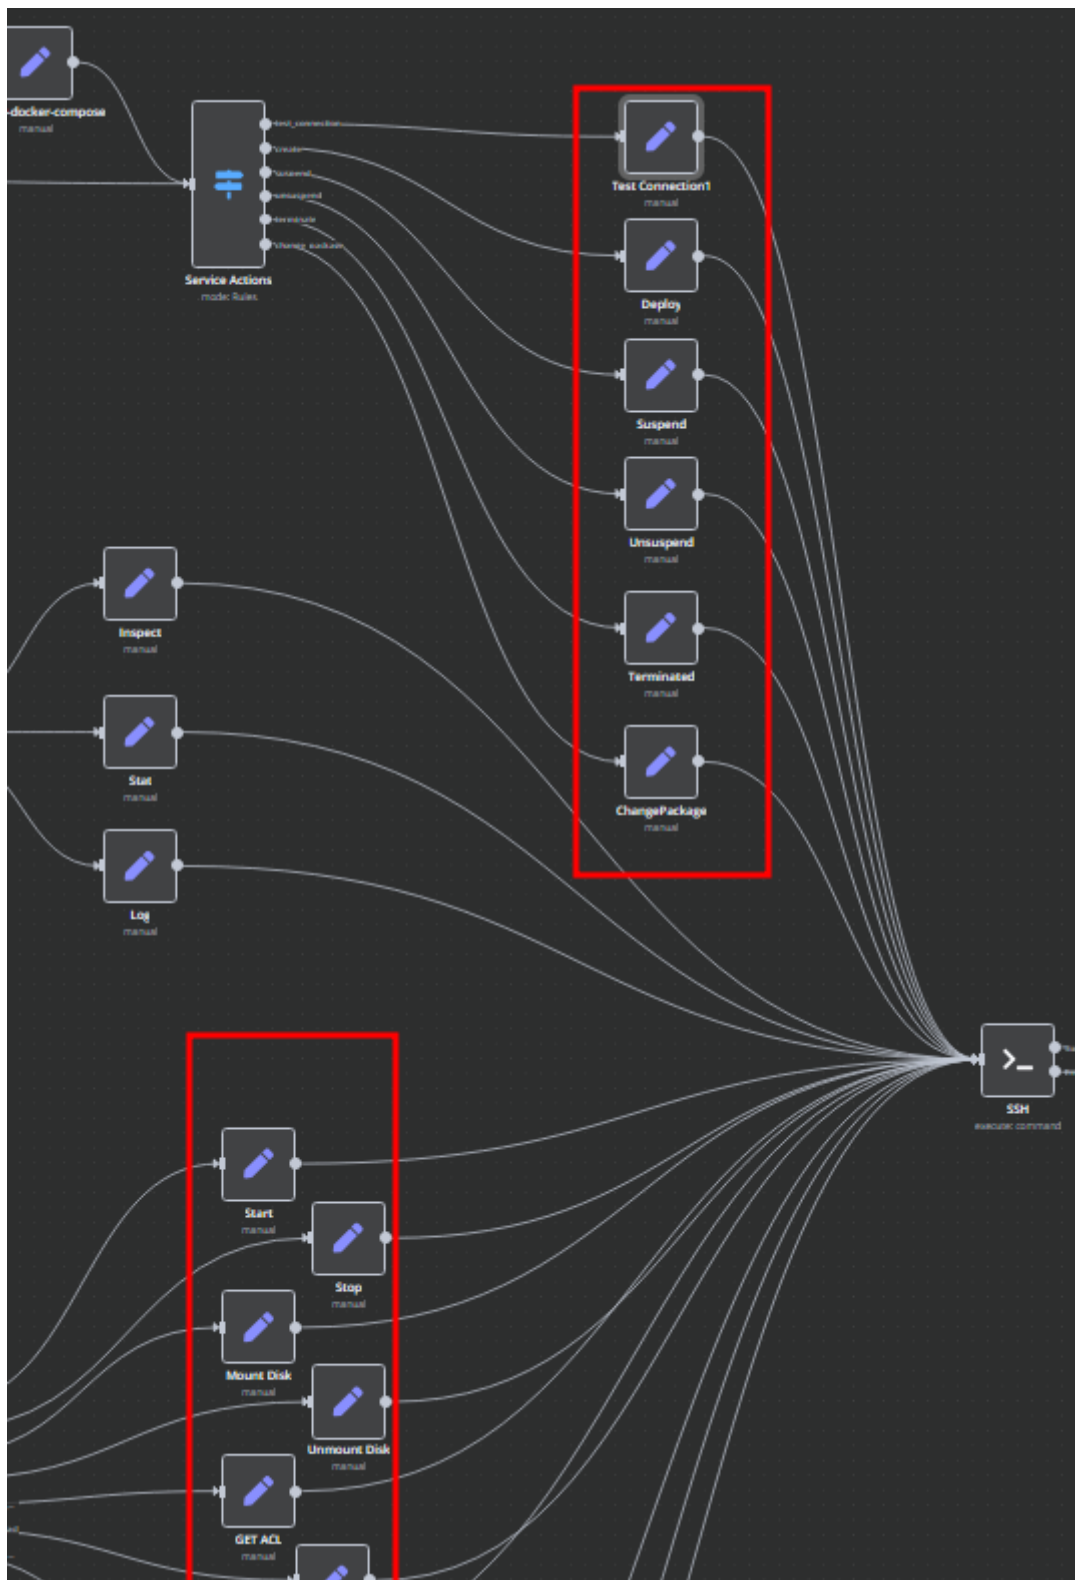

```
# Custom header proxy_set_header Host $http_host; proxy_set_header X-Real-IP $remote_addr; proxy_set_head...
```

# Bash Scripts

Management of Docker containers and all related procedures on the server is carried out by

executing Bash scripts generated in **n8n**. These scripts return either a JSON response or a string.

- All scripts are located in elements directly connected to the **SSH** element.
- You have full control over any script and can modify or execute it as needed.

# Add server

## Docker MinIO module WHMCS

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Add a new server to the system WHMCS.

System Settings->Servers->Add New Server

- Enter the correct **Name** and **Hostname**

Name	<input type="text" value="d01-test.uuq.pl"/>
Hostname	<input type="text" value="d01-test.uuq.pl"/>
IP Address	<input type="text"/>
Assigned IP Addresses (One per line)	<div></div>
Monthly Cost	<input type="text" value="0.00"/>
Datacenter/NOC	<input type="text"/>
Maximum No. of Accounts	<input type="text" value="200"/>
Server Status Address	<div><input type="text"/> To display this server on the server status page, enter the full path to the server status folder (required to be uploaded to each server you want to monitor) - eg. https://www.example.com/status/</div>
Enable/Disable	<input type="checkbox"/> Check to disable this server

Attention: Important Information

The **hostname** field represents the actual domain of the server running Docker and must match the **server\_domain** parameter in the **n8n workflow**. If they do not match, communication will not function correctly.

Additionally, this domain must be configured so that all its subdomains resolve to the IP address of the server running Docker.

Switch to Advanced Mode

- **License key** – A pre-purchased license key for the "**PUQ Docker MinIO**" module. For the module to work correctly, the key must be active
- **Disk space** – defines the allocated disk size for the Docker container.
- **CPU** – sets the CPU usage limit for the Docker container.
- **RAM** – specifies the amount of RAM allocated to the Docker container.
- **Link to instruction** – URL to a guide that will be displayed in the client panel if provided.
- **Main domain** – defines the primary domain for the web interface of the application. If

not set, the main domain will be taken from the **hostname** parameter in the server settings.

- **Subdomain** – a personal subdomain assigned to each service. If left empty or if the subdomain is already taken, it will be automatically generated in the format **{user\_id}-{service\_id}**.
- 

## Supported Macros for **App Subdomain**:

- **{user\_id}** – Client ID
- **{service\_id}** – Service ID
- **{random\_digit\_x}** – Random number (x defines the length)
- **{random\_letter\_x}** – Random letter (x defines the length)
- **{unixtime}** – Unix timestamp
- **{year}, {month}, {day}, {hour}, {minute}, {second}** – Date and time values
- **Notification, used disk space X %** – The percentage value that sets the threshold for the container's disk space usage will trigger a notification message to the client once the threshold is reached.
- **Notification disk limit email template** – The email template for the notification that will be sent when the threshold is reached.

# Product Information

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

## Admin Panel - Container Management Overview

The **admin panel** is structured into two main sections with additional control buttons for container management.

### Control Buttons

- **Container Start / Stop** – Start or stop the running container.
- **Mount Disk / Unmount Disk** – Attach or detach the container's disk to the host system. This modifies the **fstab** file to ensure proper mounting.

### Container Status & Resource Monitoring

- **Status** – Displays the current state (Running / Stopped).
- **Name** – Unique identifier and domain of the container.
- **CPU Usage** – Shows current CPU load.
- **Memory Usage** – Displays RAM consumption in real-time.
- **Disk IO & Disk Mounted** – Tracks disk input/output operations.
- **Disk File** – Indicates the actual disk image size.
- **Network IO** – Shows network traffic statistics.
- **Log Button** – Loads and displays the container logs for debugging and monitoring.

### Application Information

- **Version** – Displays the installed application version.
- **Owner** – Administrator managing the application.
- **Users** – List of assigned users with access to the application.

## Client Area Overview - Logical Structure

The **main screen** of the client area is divided into **three logical sections**:

### 1. Navigation Block

- **"Go to MinIO"**: Direct link to access the application.
- **"User Manual"**: Opens the official documentation or user guide.

### 2. Resource Usage Block

- Displays real-time statistics on container resource usage:
  - **CPU Usage**: Number of allocated CPUs and current load.
  - **Memory Usage**: RAM consumption, helping clients understand available capacity.
  - **Disk Usage**: Storage consumption within the container.
- This section is crucial for users to **monitor performance** and determine whether they need to **upgrade their package**.

### 3. Application Information & Controls

- **Application Version**: Displays the installed software version.
- **Owner Information**: Indicates the primary administrator of the application.
- **User List**: Shows active users associated with the instance.
- **Reset Password Button**: Allows the client to reset the administrator password for the application.

This **clear structure** ensures that users have **quick access** to their application, **real-time monitoring** of resource usage, and **essential management functions** in one place.
