

# Add server

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

# Add a new server to the system WHMCS

Navigate to: **System Settings** → **Servers** → **Add New Server**

- Enter the correct **Name** and **Hostname**

“ **Attention: Important Information** The **hostname** field represents the actual domain of the server running Docker and must match the **server\_domain** parameter in the **n8n workflow**. If they do not match, communication will not function correctly. Additionally, this domain must be configured so that all its subdomains resolve to the IP address of the server running Docker.

## Module settings

In the **Server Details** section, select the "**PUQ Docker MinIO**" module and enter the correct **username** and **password** for the **API endpoint** in the n8n workflow.

“ Additionally, in the **Access Hash** field, insert the **URL of the API entry point** for the n8n workflow.

Server Details

Module	PUQ Docker MinIO	<input type="button" value="Test Connection"/>	✓ Connection successful. Some values have been auto-filled.
Username	minio		
Password	****		
Access Hash	https://n8n.puqcloud.com/webhook/docker-minio		
Secure	<input checked="" type="checkbox"/> Check to use SSL Mode for Connections		
Port	443	<input type="checkbox"/> Override with Custom Port
