

# IP Access Control

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

In the client area, the client can configure access to their resource by entering allowed IP addresses in the appropriate section on the **Restrict by IP** page.

If no IP addresses are specified, access is open to all IP addresses.

The screenshot shows the 'IP Access Control' configuration page in WHMCS. On the left is a sidebar with a menu containing 'Overview', 'Information', 'Restrict by IP' (highlighted with a red box), and 'Reinstall'. The main content area has the title 'IP Access Control' and a note: 'If IP is not specified, access is not limited'. Below this, there are two sections: 'Web Console:' and 'REST API:'. Each section displays a URL (https://console.1741969814.d01-test.uuq.pl and https://1741969814.d01-test.uuq.pl respectively) and a text input field with the placeholder 'Enter allowed IPs, one per line'. At the bottom right is a 'Save' button, and at the bottom center is the text 'Powered by WHMCompleteSolution'.
