

# IP Access Control

## Docker MinIO module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

In the client area, the client can configure access to their resource by entering allowed IP addresses in the appropriate section on the **Restrict by IP** page.

If no IP addresses are specified, access is open to all IP addresses.

The page displays the service URLs (**Web Console** and **REST API**) and provides separate text areas for entering allowed IPs for each endpoint — one IP address per line.

The screenshot shows the 'IP Access Control' configuration page. On the left is a sidebar with navigation options: Overview (selected), Information, Restrict by IP, Reinstall, Actions, and Request Cancellation. The main content area is titled 'IP Access Control' and includes a note: 'If IP is not specified, access is not limited'. Below this, there are two sections for configuring access:

- Web Console:** <https://console.1-5543-47.d01-test.uuq.pl>  
Text area: Enter allowed IPs, one per line
- REST API:** <https://1-5543-47.d01-test.uuq.pl>  
Text area: Enter allowed IPs, one per line

A red 'Save' button is located at the bottom right of the configuration area.
