Description

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Before you start, it is important to read and familiarize yourself with the following articles at this link:

<https://doc.puq.info/books/docker-modules>

The **WHMCS Docker n8n module** is designed for automated provisioning and management of n8n instances on a Docker server. It seamlessly integrates with WHMCS, allowing businesses to sell and manage n8n services efficiently.

Key Features

Automated Container Management

- Automatic creation of an n8n container upon service order.
- Automated package upgrades and administrator password reset.

Service Control & Security

- Service suspension and reactivation.
- Full termination of services when needed.

Advanced Diagnostic Tools

- Built-in tools for diagnosing and managing containers.

📄 Multilingual Support

- Supports multiple languages, including **Arabic, Azerbaijani, Catalan, Chinese, Croatian, Czech, Danish, Dutch, English, Estonian, Farsi, French, German, Hebrew, Hungarian, Italian, Macedonian, Norwegian, Polish, Romanian, Russian, Spanish, Swedish, Turkish, and Ukrainian.**

⚙️ Fully Customizable Workflows

- Uses **n8n workflows** to automate processes, allowing full customization for business-specific needs.

System Requirements

To run the WHMCS Docker n8n module, ensure you have:

📄 **WHMCS version 8+**

📄 **An n8n server** for workflow automation

📄 **A server with Docker installed** for container management

Installation & Setup

1📄 Environment Preparation

- Install **WHMCS 8+**.
- Set up an **n8n server** for automation workflows.
- Ensure **Docker** is installed and running.

2📄 Module Installation

- Upload and activate the **WHMCS Docker n8n module**.
- Configure the module settings to connect with your Docker server and n8n workflows.

3 Workflow Customization

- Utilize **n8n workflows** to automate service provisioning and management.
- Modify workflows as needed for custom business logic.

4 Testing & Deployment

- Perform a **test order** to verify automatic container creation.
 - Check all service management functions (suspension, unlocking, termination).
-

Why Choose This Module?

 **Seamless automation** – Reduces manual work and speeds up service deployment.

 **Highly customizable** – Modify workflows to fit any business model.

 **User-friendly** – Integrated within WHMCS with a simple setup process.

This module makes selling and managing **n8n instances** through WHMCS easy, automated, and flexible!

Welcome to PUQ Docker n8n deploy!

Template for n8n: API Backend for WHMCS/WISECP by PUQcloud

This is an n8n template that creates an API backend for the WHMCS/WISECP module developed by PUQcloud.

Setup Instructions

1. Configure API Webhook and SSH Access

- Create a Cronjob (Block Action) for the Webhook API Block in n8n.
- Create a Cronjob for SSH access to a server with Docker installed (SSH Block).

2. Install Required Packages on the Docker Server

Run the following command on your server:

```
apt-get install curl apache2-utils -y
```

3. Modify Template Parameters

In the Parameters block of the template, update the following settings:

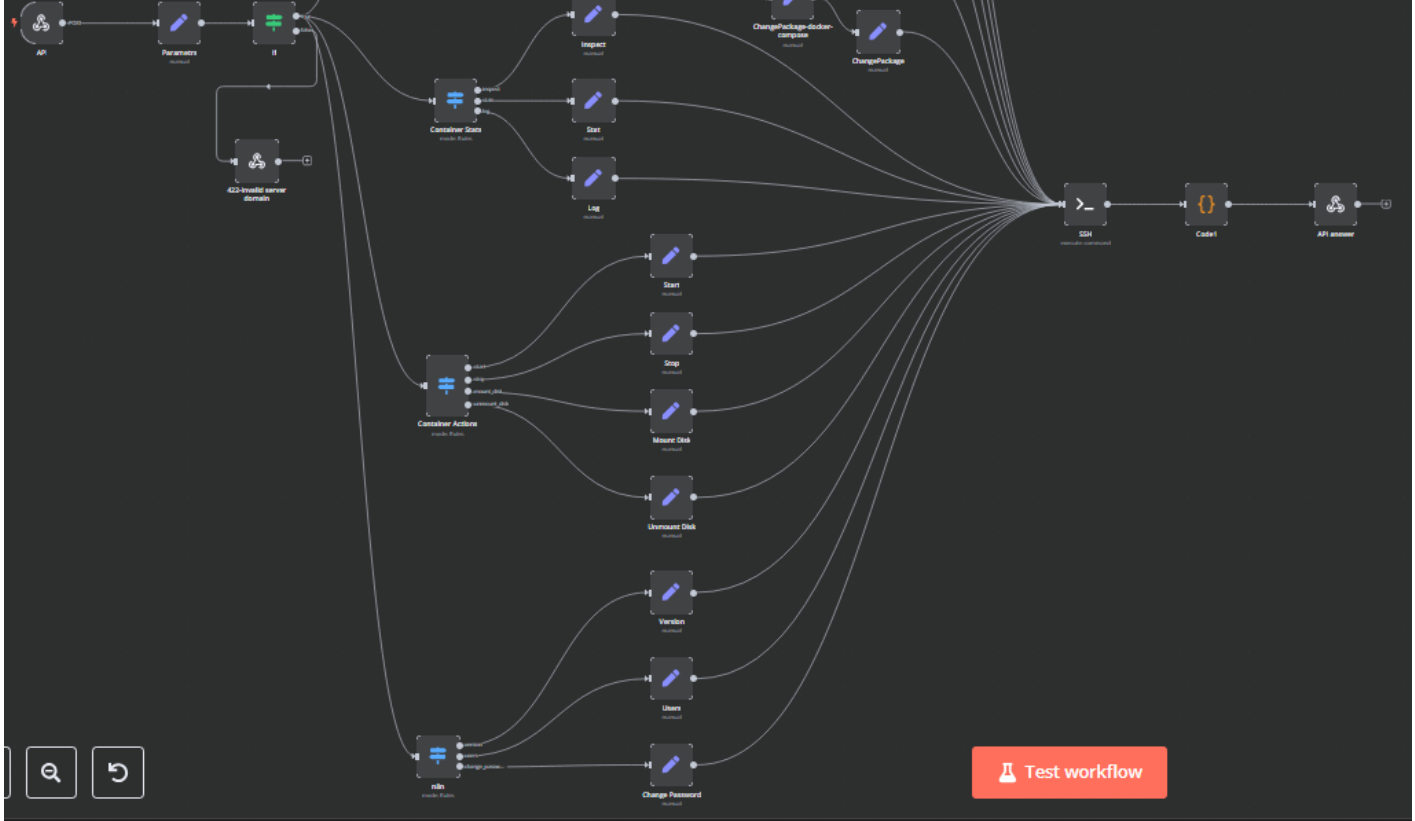

- `server_domain` - Must match the domain of the WHMCS/WISECP Docker server.
- `client_id` - ID token where user data related to Docker and disk will be stored.
- `secret_key` - Default secret pass for the container (this is recommended not to change).

Do not modify the following technical parameters:

- `server_ipfs`
- `server_port`

What is n8n

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

n8n is an open-source, workflow automation platform designed to simplify and streamline processes by integrating different services, APIs, and applications. It provides an intuitive and customizable way to automate repetitive tasks, connect systems, and create complex workflows without writing a single line of code.

Key Features of n8n:

1. **Open-Source and Self-Hosted**

One of the standout features of n8n is that it is completely open-source. This means that you have full control over your workflows and data. You can host n8n on your own servers or use it in cloud environments, ensuring maximum flexibility and customization to fit your business needs.

2. **Drag-and-Drop Interface**

n8n provides a user-friendly drag-and-drop interface that allows you to create workflows visually. This makes it easy for both technical and non-technical users to design automation processes. With just a few clicks, you can integrate different services, set triggers, and map out complex logic in your workflows.

3. **Wide Integration Support**

n8n supports integrations with over 200 different apps and services, including popular tools like Google Sheets, Slack, GitHub, and Salesforce, as well as hundreds of APIs. This extensive range of integrations means that n8n can be used in virtually any industry, whether it's automating business processes, synchronizing data, or managing communications.

4. **Powerful Workflow Logic**

n8n allows you to design workflows with powerful logic capabilities. You can use conditional statements, loops, data transformation, and even error handling within your workflows. This enables the creation of sophisticated automations that can handle a wide range of tasks, from simple data transfers to complex multi-step processes.

5. **Self-Hosting and Privacy**

With n8n, you have the option to host your workflows on your own infrastructure, giving you full control over the data and ensuring privacy. This is particularly important for businesses that require compliance with data protection regulations or have sensitive

information that should not leave their environment.

6. **Scalability**

n8n can scale with your business. Whether you're running a few simple automations or thousands of complex workflows, n8n's architecture supports scaling horizontally. You can easily add more workers to handle increased load or deploy it in a distributed setup to ensure high availability.

7. **Version Control and Collaboration**

n8n allows you to use version control for your workflows, making it easy to track changes and collaborate with team members. You can export workflows, share them with others, and keep a history of changes for better collaboration and version management.

8. **Extensible with Custom Nodes**

One of n8n's greatest strengths is its extensibility. If the integrations you need aren't available out of the box, you can easily create your own custom nodes using JavaScript. This makes n8n adaptable to almost any business need, no matter how niche.

Why Choose n8n?

n8n stands out in the world of workflow automation because it offers a powerful and flexible solution that is both user-friendly and highly customizable. As an open-source tool, n8n provides a level of control and privacy that is hard to find in many commercial automation platforms. Its extensive integrations, scalability, and easy-to-use interface make it suitable for businesses of all sizes, from startups to large enterprises.

Moreover, n8n's self-hosting option means that you can have full control over your automations, ensuring that your sensitive data stays within your network, which is crucial for businesses with privacy concerns.

Use Cases for n8n

n8n can be used across various industries and use cases, such as:

- **Automating Business Processes:** Streamline tasks like invoice generation, data entry, or project management.
- **Data Synchronization:** Sync data between various platforms such as CRM, databases, and marketing tools.
- **API Integration:** Automate interactions between different services without manually coding complex API requests.
- **Custom Workflows:** Build and automate workflows specific to your business, such as custom notifications, alerts, and reporting systems.
- **Customer Communication:** Automate email, SMS, or chat notifications to improve customer engagement.

Conclusion

n8n provides a flexible, powerful, and open-source alternative to commercial workflow automation platforms. With its user-friendly interface, broad integration options, and robust logic capabilities,

it enables users to automate tasks across various applications with minimal effort. Whether you need simple automations or complex, multi-step workflows, n8n offers an easy way to automate, save time, and increase efficiency within your business.

Changelog

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

v1.0 Released 17-03-2025

First version

Installation and configuration guide

Basic concepts and requirements

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Before you start, it is important to read and familiarize yourself with the following articles at this link:

<https://doc.puq.info/books/docker-modules>

The **WHMCS Docker n8n module** is part of the **WHMCS Docker module series** developed by **PUQcloud**. This module enables service providers to offer **n8n Docker containers** as a service to their clients, allowing for seamless automation and integration.

The system consists of three core components:

WHMCS Module

The **core component**, installed in WHMCS, manages service provisioning and automation from the WHMCS side.

Debian 12 Server

A server running **Debian 12** with the following pre-installed:

- ☐ **Docker** – For container management
- ☐ **SQLite3** – For lightweight database operations
- ☐ **Apache2-utils** – For authentication and performance enhancements

We have prepared instructions for installing and configuring Docker

<https://doc.puq.info/books/docker-modules/page/installing-docker-for-puqcloud-modules>

☐☐ **n8n Server**

This server facilitates communication between the WHMCS module and the Docker server, ensuring smooth workflow execution.

To explore n8n's full potential, visit the [official n8n website](#) for documentation, tutorials, and community support.

Key Features & Concepts

⚙️ **Workflow Automation**

n8n provides a **graphical workflow builder**, allowing users to automate various tasks, such as:

- ✓ **Sending notifications**
- ✓ **Configuring firewalls** on external routers
- ✓ **Managing DNS settings**
- ✓ **Custom automation processes** tailored to specific needs

☐☐ **Flexibility & Customization**

The module offers **personalized settings** and supports **elastic automation**, giving clients full control over their n8n workflows.

WHMCS setup (install/update)

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Module is coded ionCube v13

Supported php version:

- php 7.4 WHMCS 8.11.0 -
- php 8.1 WHMCS 8.11.0 +
- php 8.2 WHMCS 8.11.0 +

To install and update a module, you must perform one and the same action.

1. Download the latest version of the module.

PHP 8.2

```
wget http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-n8n/php82/PUQ_WHMCS-Docker-n8n-latest.zip
```

PHP 8.1

```
wget http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-n8n/php81/PUQ_WHMCS-Docker-n8n-latest.zip
```

PHP 7.4

```
wget http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-n8n/php74/PUQ_WHMCS-Docker-n8n-latest.zip
```

All versions are available via link:

https://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Docker-n8n/

2. Unzip the archive with the module.

```
unzip PUQ_WHMCS-Docker-n8n-latest.zip
```

3. Copy and Replace "puqDockerN8N" from "PUQ_WHMCS-Docker-n8n" to "WHMCS_WEB_DIR/modules/servers/"

Preparing Docker Server

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

To install the Docker server for this module, please follow the instructions at the following link:

<https://doc.puq.info/books/docker-modules/page/installing-docker-for-puqcloud-modules>

Setting up n8n workflow

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Overview

The **Docker n8n WHMCS module** uses a specially designed workflow for **n8n** to automate deployment processes. The workflow provides an API interface for the module, receives specific commands, and connects via SSH to a server with Docker installed to perform predefined actions.

Prerequisites

- You must have your own **n8n** server.
- Alternatively, you can use the official **n8n** cloud installations available at: [n8n Official Site](#)

Installation Steps

Install the Required Workflow on n8n

You have two options:

Option 1: Use the Latest Version from the n8n Marketplace

- The latest workflow templates for our modules are available on the official n8n marketplace.

- Visit our profile to access all available templates: [PUQcloud on n8n](#)

Option 2: Manual Installation

- Each module version comes with a workflow template file.

- You need to manually import this template into your n8n server.

n8n Workflow API Backend Setup for WHMCS/WISECP

Configure API Webhook and SSH Access

- Create a **Basic Auth Credential** for the Webhook API Block in n8n.

3. Modify Template Parameters

In the Parameters block of the template, update the following settings:

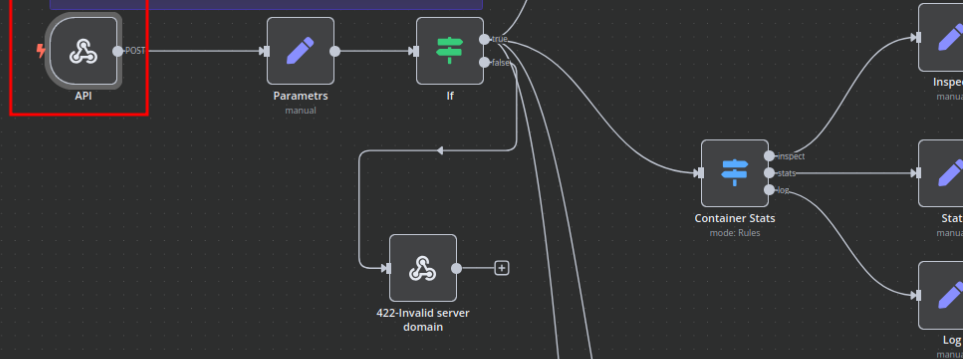

- `server_domain` - must match the domain of the WHMCS/WISECP Docker server.
- `clients_dir` - directory where user data related to Docker and disks will be stored.
- `mount_dir` - default mount point for the container disk (recommended not to change).

Do not modify the following technical parameters:

- `screen_left`
- `screen_right`

Additional Resources

- Full documentation: <https://doc.puq.info/books/docker-n8n-whmcs-module>
- WHMCS module: <https://puqcloud.com/whmcs-module-docker-n8n.php>
- WISECP module: <https://puqcloud.com/wisecp-module-docker-n8n.php>

Bash Scripts

Management of Docker containers and all related procedures on the server is carried out by

executing Bash scripts generated in **n8n**. These scripts return either a JSON response or a string.

- All scripts are located in elements directly connected to the **SSH** element.
- You have full control over any script and can modify or execute it as needed.

Add server

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Add a new server to the system WHMCS.

System Settings->Servers->Add New Server

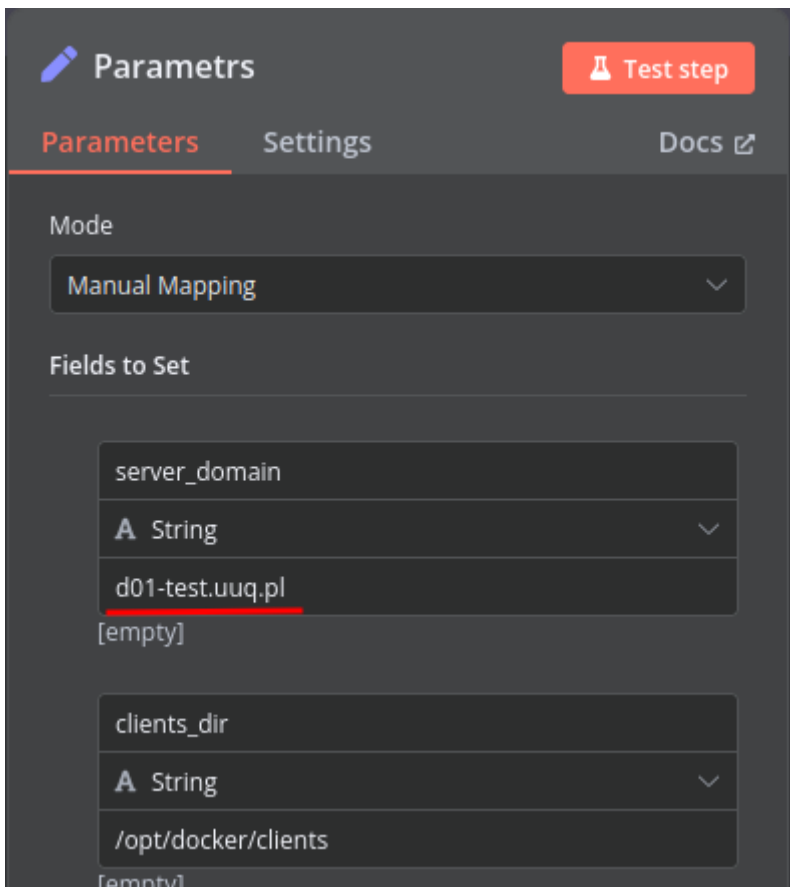

- Enter the correct **Name** and **Hostname**

Name	<input type="text" value="d01-test.uuq.pl"/>
Hostname	<input type="text" value="d01-test.uuq.pl"/>
IP Address	<input type="text"/>
Assigned IP Addresses (One per line)	<div></div>
Monthly Cost	<input type="text" value="0.00"/>
Datacenter/NOC	<input type="text"/>
Maximum No. of Accounts	<input type="text" value="200"/>
Server Status Address	<div><input type="text"/> To display this server on the server status page, enter the full path to the server status folder (required to be uploaded to each server you want to monitor) - eg. https://www.example.com/status/</div>
Enable/Disable	<input type="checkbox"/> Check to disable this server

Attention: Important Information

The **hostname** field represents the actual domain of the server running Docker and must match the **server_domain** parameter in the **n8n workflow**. If they do not match, communication will not function correctly.

Additionally, this domain must be configured so that all its subdomains resolve to the IP address of the server running Docker.

The screenshot shows a 'Parameters' configuration window with a dark theme. At the top, there is a 'Test step' button. Below it are tabs for 'Parameters' (selected), 'Settings', and 'Docs'. The 'Mode' is set to 'Manual Mapping'. Under 'Fields to Set', there are two parameter groups. The first group is for 'server_domain', which is a 'String' type, and its value is 'd01-test.uuq.pl' (underlined in red). The second group is for 'clients_dir', which is also a 'String' type, and its value is '/opt/docker/clients'.

In the **Server Details** section, select the "**PUQ Docker n8n**" module and enter the correct **username** and **password** for the **API endpoint** in the n8n workflow.

Additionally, in the **Access Hash** field, insert the **URL of the API entry point** for the n8n workflow.

Server Details

Module	<div>PUQ Docker n8n</div> <div>Test Connection</div> <div>✓ Connection successful. Some values have been auto-filled.</div>

- **License key** - A pre-purchased license key for the **"PUQ Docker n8n"** module. For the module to work correctly, the key must be active
- **Disk space** - defines the allocated disk size for the Docker container.
- **CPU** - sets the CPU usage limit for the Docker container.
- **RAM** - specifies the amount of RAM allocated to the Docker container.
- **Link to instruction** - URL to a guide that will be displayed in the client panel if provided.
- **Main domain** - defines the primary domain for the web interface of the application. If not set, the main domain will be taken from the **hostname** parameter in the server

settings.

- **Subdomain** – a personal subdomain assigned to each service. If left empty or if the subdomain is already taken, it will be automatically generated in the format **{user_id}-{service_id}**.
-

Supported Macros for **App Subdomain**:

- **{user_id}** – Client ID
- **{service_id}** – Service ID
- **{random_digit_x}** – Random number (x defines the length)
- **{random_letter_x}** – Random letter (x defines the length)
- **{unixtime}** – Unix timestamp
- **{year}, {month}, {day}, {hour}, {minute}, {second}** – Date and time values
- **Notification, used disk space X %** – The percentage value that sets the threshold for the container's disk space usage will trigger a notification message to the client once the threshold is reached.
- **Notification disk limit email template** – The email template for the notification that will be sent when the threshold is reached.

Admin Area

Product Information

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Admin Panel - Container Management Overview

The **admin panel** is structured into two main sections with additional control buttons for container management.

Control Buttons

- **Container Start / Stop** – Start or stop the running container.
- **Mount Disk / Unmount Disk** – Attach or detach the container's disk to the host system. This modifies the **fstab** file to ensure proper mounting.

Container Status & Resource Monitoring

- **Status** – Displays the current state (Running / Stopped).
- **Name** – Unique identifier and domain of the container.
- **CPU Usage** – Shows current CPU load.
- **Memory Usage** – Displays RAM consumption in real-time.
- **Disk IO & Disk Mounted** – Tracks disk input/output operations.
- **Disk File** – Indicates the actual disk image size.
- **Network IO** – Shows network traffic statistics.
- **Log Button** – Loads and displays the container logs for debugging and monitoring.

Application Information

- **Version** – Displays the installed application version.
- **Owner** – Administrator managing the application.
- **Users** – List of assigned users with access to the application.

Permissions 0644 for n8n settings file /home/node/.n8n/config are too wide. This is ignored for now, but in the future n8n will attempt to change the permissions automatically. To automatically enforce correct permissions now set N8N_ENFORCE_SETTINGS_FILE_PERMISSIONS=true (recommended), or turn this check off set N8N_ENFORCE_SETTINGS_FILE_PERMISSIONS=false.

Client Area

Home screen

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

Client Area Overview - Logical Structure

The **main screen** of the client area is divided into **three logical sections**:

1. Navigation Block

- **"Go to n8n"**: Direct link to access the application.
- **"User Manual"**: Opens the official documentation or user guide.

2. Resource Usage Block

- Displays real-time statistics on container resource usage:
 - **CPU Usage**: Number of allocated CPUs and current load.
 - **Memory Usage**: RAM consumption, helping clients understand available capacity.
 - **Disk Usage**: Storage consumption within the container.
- This section is crucial for users to **monitor performance** and determine whether they need to **upgrade their package**.

3. Application Information & Controls

- **Application Version**: Displays the installed software version.
- **Owner Information**: Indicates the primary administrator of the application.
- **User List**: Shows active users associated with the instance.
- **Reset Password Button**: Allows the client to reset the administrator password for the application.

This **clear structure** ensures that users have **quick access** to their application, **real-time monitoring** of resource usage, and **essential management functions** in one place.

IP Access Control

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

In the client area, the client can configure access to their resource by entering allowed IP addresses in the appropriate section on the **Restrict by IP** page.

If no IP addresses are specified, access is open to all IP addresses.

The screenshot displays the PUKcloud client area interface. At the top, the PUKcloud logo is on the left, and a search bar and user profile (Hello, ruslan!) are on the right. Below the logo is a navigation menu with links: Home, Services, Domains, Billing, Support, and Open Ticket. The main content area shows the breadcrumb path: Portal Home / Client Area / My Products & Services / Product Details. On the left, a sidebar menu lists: Overview, Information, Restrict by IP (highlighted with a red box), and Reinstall. Under the 'Actions' section, there are links for Upgrade/Downgrade and Request Cancellation. The main content area is titled 'IP Access Control' and states 'If IP is not specified, access is not limited'. Below this, the URL 'https://1-5336.app.d01-test.uuq.pl' is shown. A 'WEB:' label is followed by a text input field containing the IP addresses '77.87.125.1' and '77.87.125.3'. A 'Save' button is located at the bottom right of the input field. The footer of the page indicates 'Powered by WHMCompleteSolution'.

Reinstall

Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

The client has the option to **fully reinstall the application**, which will result in **complete data loss**.

This action can be performed on the **Reinstall** page, which also includes **protection against accidental reinstallation**.
