

# IP Access Control

## Docker n8n module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

In the client area, the client can configure access to their resource by entering allowed IP addresses in the appropriate section on the **Restrict by IP** page.

If no IP addresses are specified, access is open to all IP addresses.

The screenshot displays the PUQcloud client interface. At the top, the PUQcloud logo is on the left, and a search bar and user profile (Hello, ruslan!) are on the right. A navigation menu includes Home, Services, Domains, Billing, Support, and Open Ticket. Below this, a breadcrumb trail reads: Portal Home / Client Area / My Products & Services / Product Details.

The main content area is titled "IP Access Control" with the subtitle "If IP is not specified, access is not limited". It shows a URL "https://1-5336.app.d01-test.uuq.pl". Under the "WEB:" section, there is a text input field containing the IP addresses "77.87.125.1" and "77.87.125.3". A "Save" button is located below the input field.

On the left sidebar, the "Restrict by IP" option is highlighted with a red rectangle. The sidebar also includes sections for Overview, Information, Reinstall, Actions, Upgrade/Downgrade, and Request Cancellation.

At the bottom of the page, it says "Powered by WHMCompleteSolution".
