Client Area Overview – Logical Structure

The **main screen** of the client area for the NextCloud service is divided into **three logical sections**:

1. **Navigation Block**
   - **"Go to NextCloud"**: Direct link to your NextCloud web interface.
   - **"User Manual"**: Provides direct access to official NextCloud documentation and user guides.
2. **Resource Usage Block**
   - Displays real-time metrics about your NextCloud container’s resource utilization:
     - **CPU Usage**: Displays allocated CPUs and current load percentage.
     - **Memory Usage**: Shows RAM consumption, providing clarity on resource availability.
     - **Disk Usage**: Indicates used and available storage space within the container.
   - Helps users **monitor container performance** and assess whether a **plan upgrade** might be necessary.
3. **Application Information & Controls**
   - **NextCloud Version**: Shows the installed version of NextCloud.
   - **Administrator Information**: Identifies the primary account managing the NextCloud instance.
   - **User List**: Displays all active users associated with the NextCloud instance.
   - **Reset Password Button**: Enables administrators to reset their login password conveniently.

This **clear and intuitive structure** ensures users have **easy access** to their NextCloud instance, facilitates **efficient real-time monitoring** of resources, and centralizes **critical management functionalities** for streamlined operation.

IP Access Control

Docker NextCloud module **WHMCS**

Order now | Download | FAQ | n8n

In the client area, customers have the ability to manage access to their **NextCloud** instance by defining a list of allowed IP addresses. This is configured in the **Restrict by IP** section of the service panel.

Only the IP addresses listed in this section will be allowed to connect to the NextCloud container. All other connections will be blocked for enhanced security.

Note: If no IP addresses are added, the system will allow access from any IP address by default.

Reinstall

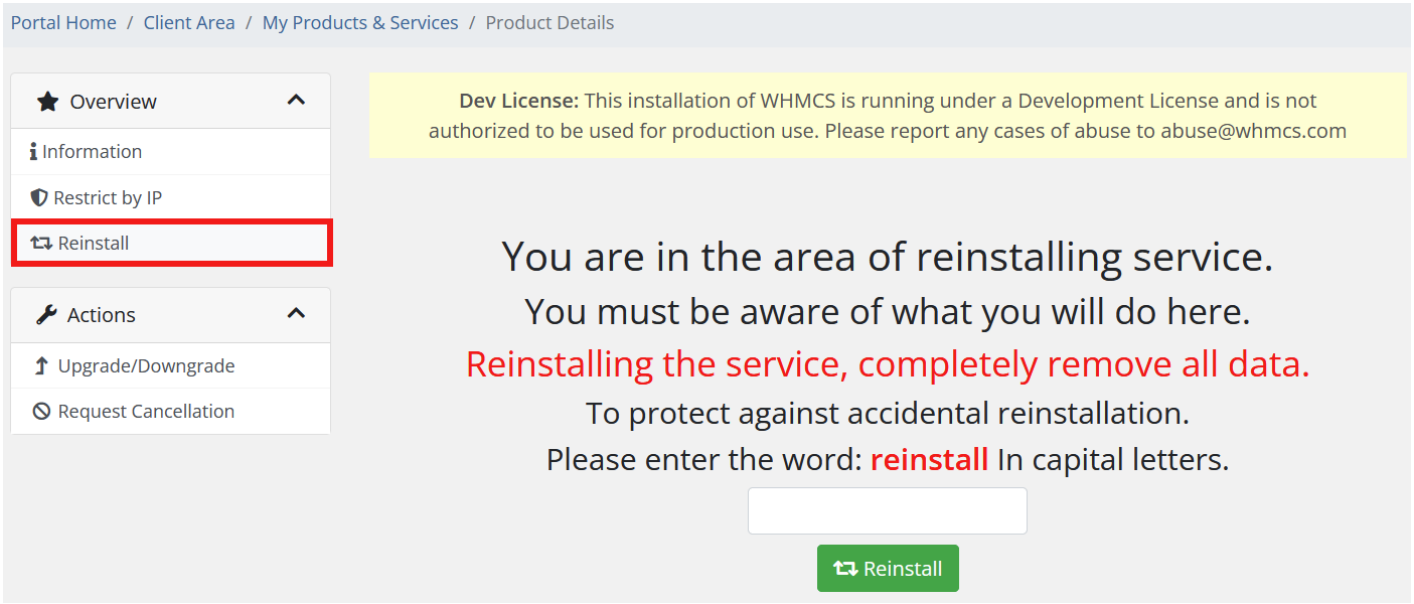

Docker NextCloud module **WHMCS**

Order now | Download | FAQ | n8n

Clients have the ability to **fully reinstall their NextCloud instance** directly from the client area. This feature is helpful in cases where a clean setup is needed due to misconfiguration or performance issues.

Important: Reinstalling the instance will result in **permanent data loss**. All files, user accounts, and settings stored within the container will be erased and replaced with a fresh NextCloud installation.

The reinstall process can be launched from the **Reinstall** page in the client interface. To avoid accidental reinstallation, the module includes a **confirmation prompt** to protect the user from unintended actions.

Metrics

Docker NextCloud module **WHMCS**

Order now | Download | FAQ | n8n

If you are using metric-based billing for your NextCloud service (e.g., billing based on bandwidth, disk usage, or other resource consumption), the **Metrics** tab in the client area provides detailed usage statistics.

This data can help users monitor their usage trends and predict when they may need to upgrade or adjust their current plan. Administrators can also use this data for transparent and accurate billing.
