Add server

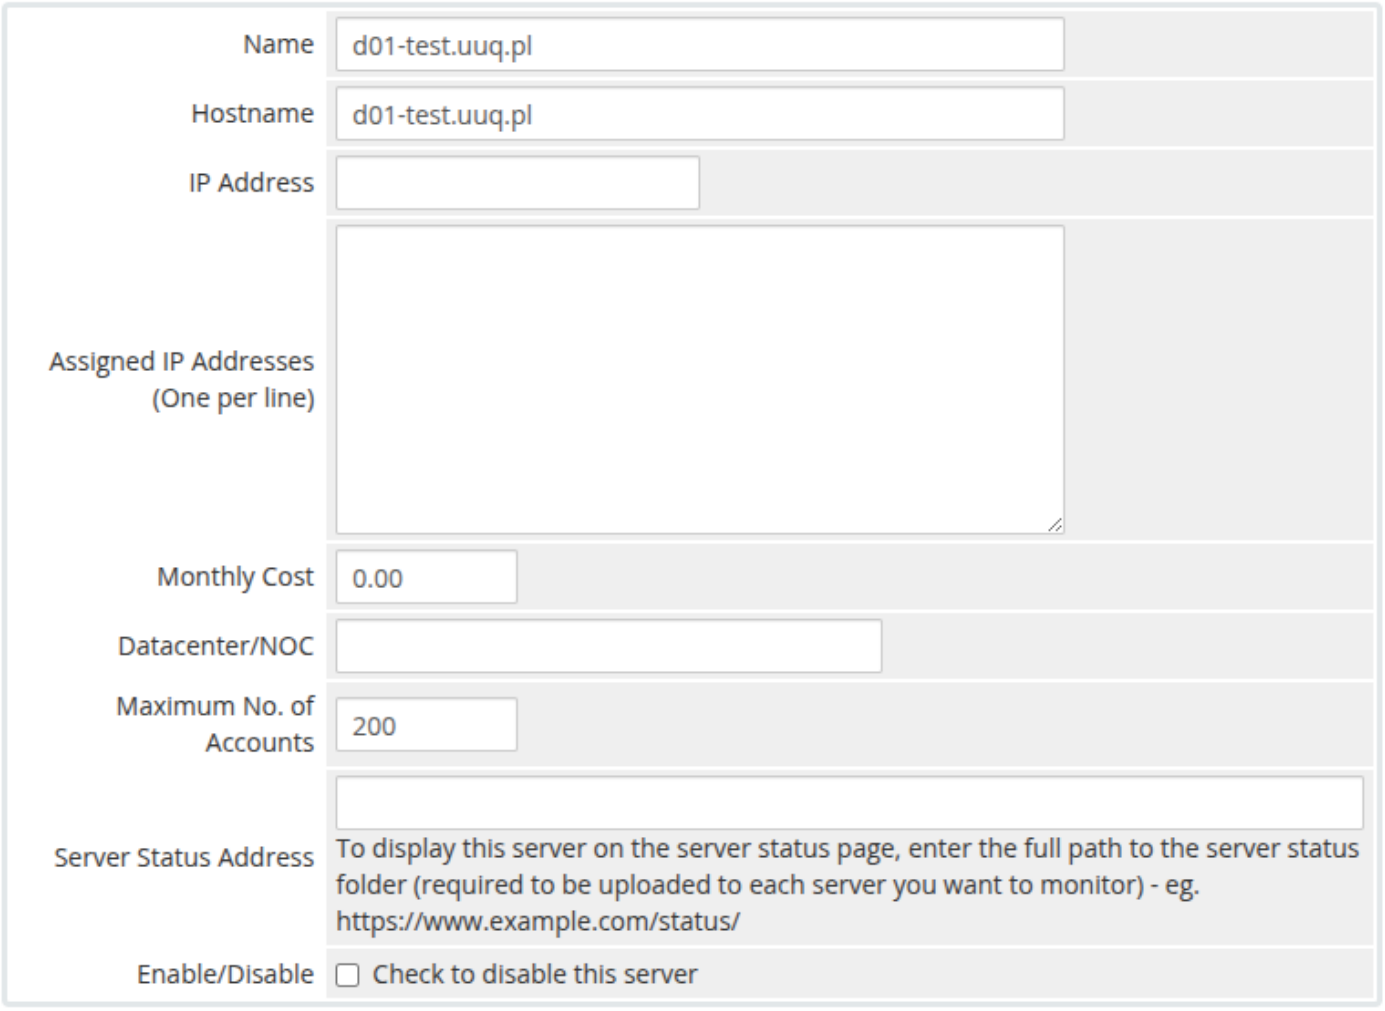

Docker NextCloud module **WHMCS**

Order now | Download | FAQ | n8n

Add a new server to the WHMCS system.

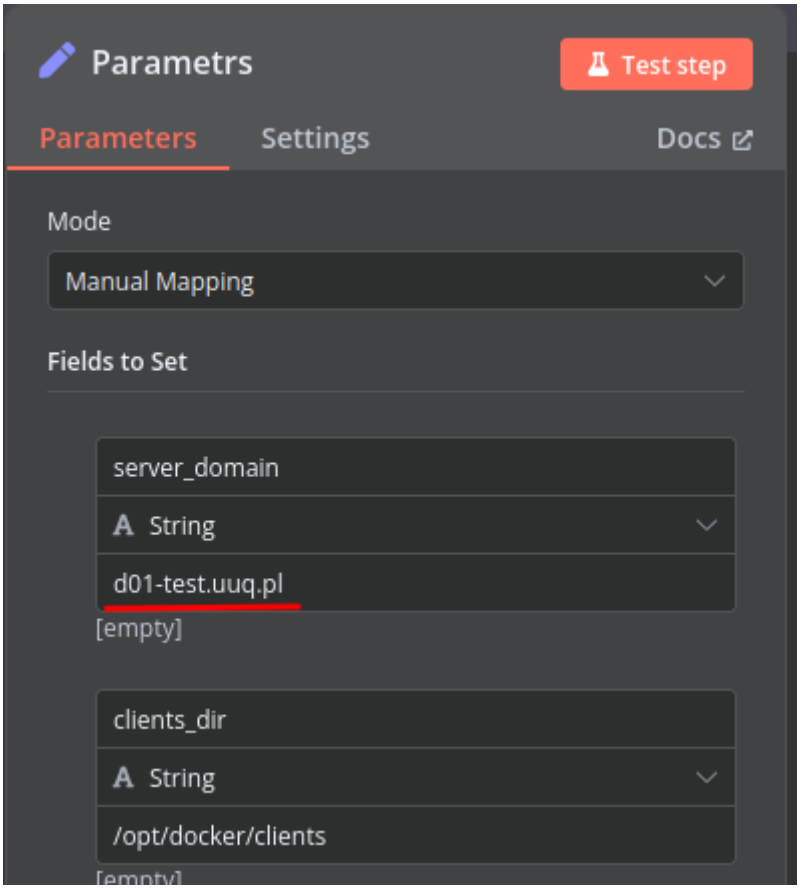

```
System Settings->Servers->Add New Server
```

- Enter the correct **Name** and **Hostname** for your server.

Attention: Important Information The **hostname** field must precisely match the

domain configured as **server_domain** in the **n8n workflow**. Misalignment between these parameters will disrupt the communication between WHMCS and Docker. Furthermore, ensure this domain is configured so that all subdomains point correctly to the Docker server's IP address.

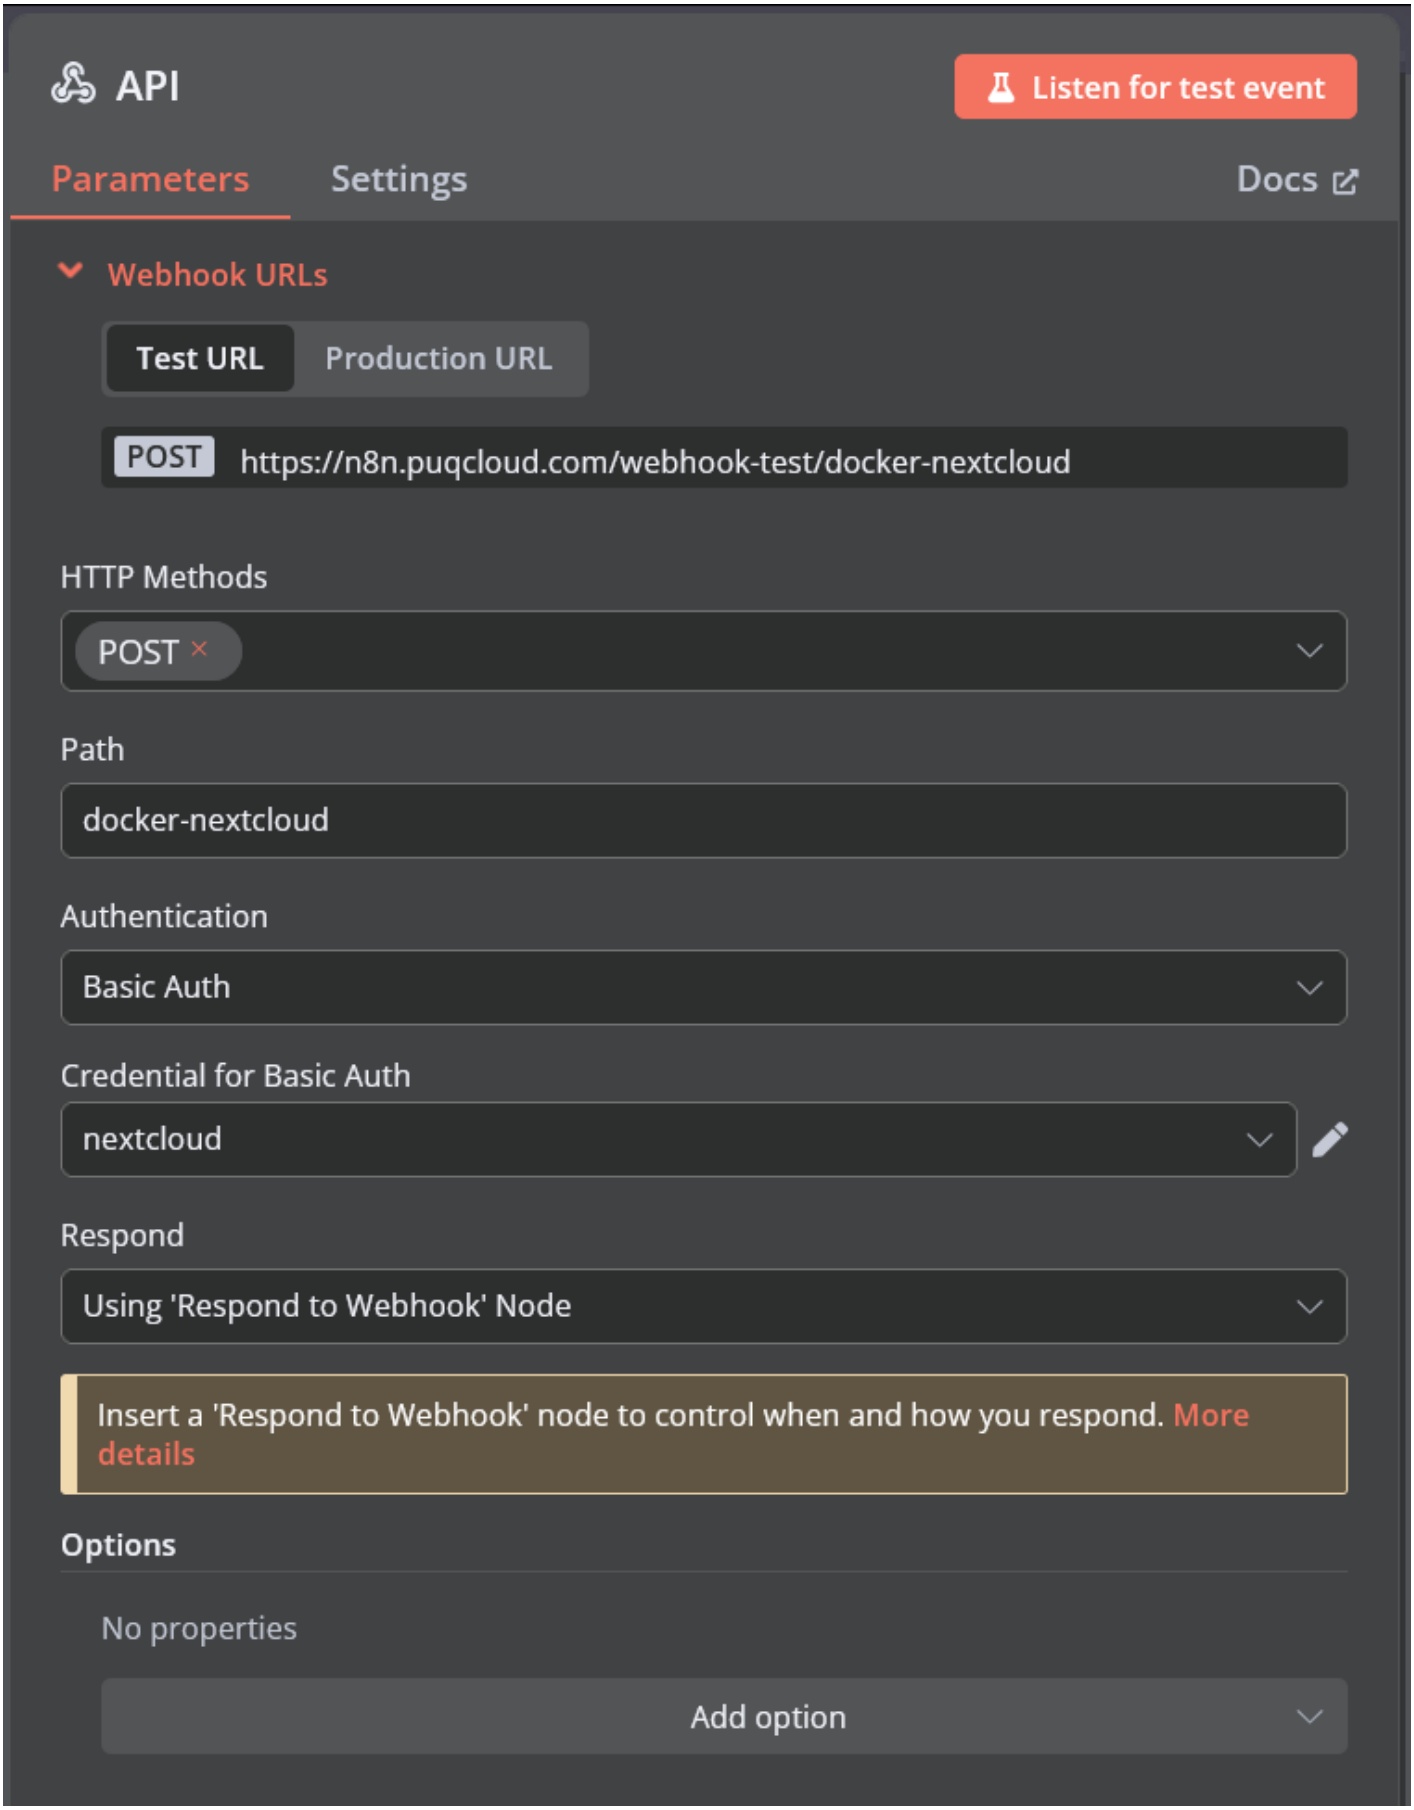

In the **Server Details** section, choose the module **"PUQ Docker NextCloud"**. Enter the accurate **username** and **password** as configured for the **API endpoint** in the n8n workflow.

Additionally, input the **URL of the API entry point** from the n8n workflow into the **Access Hash** field.

Server Details

Module	PUQ Docker NextCloud  
Username	nextcloud
Password	●●●●●●●●●●●●●●●●
Access Hash	https://n8n.puqcloud.com/webhook/docker-nextcloud
Secure	Check to use SSL Mode for Connections
