

IP Access Control

Docker NextCloud module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#) | [n8n](#)

In the client area, customers have the ability to manage access to their **NextCloud** instance by defining a list of allowed IP addresses. This is configured in the **Restrict by IP** section of the service panel.

Only the IP addresses listed in this section will be allowed to connect to the NextCloud container. All other connections will be blocked for enhanced security.

Note: If no IP addresses are added, the system will allow access from any IP address by default.

The screenshot shows the WHMCS interface for IP Access Control. At the top, there is a breadcrumb trail: Portal Home / Client Area / My Products & Services / Product Details. On the left, a sidebar menu contains: Overview (with a star icon and an upward arrow), Information (with an 'i' icon), Restrict by IP (highlighted with a red box and a shield icon), and Reinstall (with a circular arrow icon). Below this, an 'Actions' section includes Upgrade/Downgrade (with an upward arrow icon) and Request Cancellation (with a circular arrow icon). The main content area features a yellow warning box: 'Dev License: This installation of WHMCS is running under a Development License and is not authorized to be used for production use. Please report any cases of abuse to abuse@whmcs.com'. Below the warning, the title 'IP Access Control' is displayed, followed by the text 'If IP is not specified, access is not limited'. The URL 'https://nextcloud-2-5365.app.d01-test.uuq.pl' is shown. A 'WEB:' label is next to a text input field with the placeholder 'Enter allowed IPs, one per line'. A blue 'Save' button is at the bottom right.
