

# Emby Family

## WISECP module

This module allows your company to offer public media services to customers through Emby accounts. It facilitates the creation of customer accounts on a pre-configured Emby server, enabling the sale of various media packages at different prices. Moreover, it includes the functionality to add multiple media accounts for a single service. This feature enables customers to manage multiple Emby accounts under one subscription. Administrators retain control over user account management, with the ability to suspend, terminate, or unsuspend accounts, change passwords, and more. Meanwhile, clients have the autonomy to manage their devices and libraries efficiently. The module also supports multiple languages, ensuring accessibility for a diverse user base. The module supports Emby Connect functionality.

# Description

## Emby Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

Thanks to the module, the company can now offer public media services to its customers based on Emby accounts with added flexibility.

The module facilitates the creation of customer accounts on a pre-prepared Emby server. Now, it empowers users to define and manage multiple media accounts, allowing for more tailored offerings and increased customer satisfaction. Each account corresponds to a selected package, enabling customers to access varied media content at different price points. Notably, clients can now possess multiple independent media accounts, broadening their media access options.

Moreover, the module seamlessly integrates with Emby Connect functionality, enabling users to access their media accounts across different devices and platforms with ease.

For the correct operation of the module, a pre-prepared Emby installation is required (the module does not assist in the installation of the Emby server and assumes that such installation is ready for operation through API.) Module use Emby API to manage clients account.

We have prepared a detailed installation manual for the module, including all the steps needed to implement the module, including the preparation of the Emby server, including all installation steps such as PHP, Emby , SSL certificates etc.

### **Requirements:**

WISECP: v3.1.5+, php: v8.x, IONCUBE: V12+  
Emby: v4.7+

## Functions:

- Auto create and deploy client account
- Multi-Account Support: Enable users to manage multiple media accounts within a single

service

- The module uses only the API to manage the accounts
- Module supports multilingualism (**Arabic, Bosnian, Czech, German, Greek, English, Spanish, Persian, French, Hungarian, Indonesian, Italian, Georgian, Latvian, Dutch, Polish, Portuguese, Romanian, Ukrainian**)
- The module shows all user info: enabled user libraries, active devices etc.
- Link to instructions for setting up the service in the client area.
- Emby Connect Integration: Seamlessly access media accounts across different devices and platforms using Emby Connect functionality.

## Available options in the admin panel:

- Create users
- Suspend users
- Terminate users
- Unsuspend users
- Change users password
- Change Package
- Drop all devices
- API connection status
- List of active devices
- List of enabled user libraries
- List of Media Accounts

## Available options in the client panel:

- List of active devices
- List of enabled user libraries
- Drop all devices
- Change the Emby user password
- Add/Manage Emby Connect account
- Add/Management/Delete Media Account
- Drop Account Devices
- List of Media Accounts

Update

# Changelog

## Emby Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

### v1.0.1 Released 13-08-2024

1. Fixed bug with password, when "Show password" is "no"
  2. Fixed a bug with sub-accounts. Now, if the number of media accounts equals 0, when "Change package" is clicked, the sub-accounts are removed.
- 

### v1.0 Released 05-07-2024

First version

# Installation and configuration guide

# Setup (install/update)

## Emby Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

To install and update a module, you must perform one and the same action.

### 1. Download the latest version of the module.

```
wget http://download.puqcloud.com/WISECP/Product/PUQ_WISECP-Emby-Family/PUQ_WISECP-Emby-Family-latest.zip
```

All versions are available: [https://download.puqcloud.com/WISECP/Product/PUQ\\_WISECP-Emby-Family/](https://download.puqcloud.com/WISECP/Product/PUQ_WISECP-Emby-Family/)

### 2. Unzip the archive with the module.

```
unzip PUQ_WISECP-Emby-Family-latest.zip
```

### 3. Copy and Replace "puqEmbyFamily" from "PUQ\_WISECP-Emby-Family" to "WISECP\_WEB\_DIR/coremio/modules/Product/"

# Setup guide: Emby setup

## Emby Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

### 1. Install Emby on your server

To simplify deployment and help automate this for as many users as possible, we provide a BASH script to handle repo installation as well as installing Emby. All you need to do is run this command on your system

```
wget https://github.com/MediaBrowser/Emby.Releases/releases/download/4.7.14.0/emby-server-deb_4.7.14.0_amd64.deb
```

```
dpkg -i emby-server-deb_4.7.14.0_amd64.deb
```

### 2. SSL certificate generation:

```
sudo apt install nginx certbot python3-certbot-nginx
```

```
sudo certbot --nginx --agree-tos --redirect --hsts --staple-ocsp --email YOUR_EMAIL -d DOMAIN_NAME
```

```
echo "0 0 * * * root certbot renew --quiet --no-self-upgrade --post-hook 'systemctl reload nginx'" | sudo tee -a /etc/cron.d/renew_certbot
```

### 3. Configure nginx from a subdomain

Create a file named nginx.conf.

```
cd /etc/nginx/conf.d/  
nano nginx.conf
```

Then, insert the following text, replacing **DOMAIN\_NAME** with your domain.

```
# Uncomment the commented sections after you have acquired a SSL Certificate  
server {  
    listen 80;  
    #listen [::]:80;  
    server_name DOMAIN_NAME;  
  
    # Uncomment to redirect HTTP to HTTPS  
    return 302 https://$host$request_uri;  
}  
  
server {  
    listen 443 ssl http2;  
    #listen [::]:443 ssl http2;  
    server_name DOMAIN_NAME;  
  
    ## The default `client_max_body_size` is 1M, this might not be enough for some  
posters, etc.  
    client_max_body_size 20M;  
  
    # use a variable to store the upstream proxy  
    # in this example we are using a hostname which is resolved via DNS  
    # (if you aren't using DNS remove the resolver line and change the variable to point  
to an IP address e.g `set $emby 127.0.0.1`)  
    set $emby 127.0.0.1;  
    resolver 127.0.0.1 valid=30;  
  
    ssl_certificate /etc/letsencrypt/live/DOMAIN_NAME/fullchain.pem;  
    ssl_certificate_key /etc/letsencrypt/live/DOMAIN_NAME/privkey.pem;  
    include /etc/letsencrypt/options-ssl-nginx.conf;  
    ssl_dhparam /etc/letsencrypt/ssl-dhparams.pem;  
    add_header Strict-Transport-Security "max-age=31536000" always;  
    ssl_trusted_certificate /etc/letsencrypt/live/DOMAIN_NAME/chain.pem;  
    ssl_stapling on;  
    ssl_stapling_verify on;
```

```

Media

In the opened window, click the **'Create New Service'** button.

On the opened page, enter all the necessary details for your new service and navigate to the '**Core**' tab.

Select the '**PUQ Emby Family**' module from the drop-down list of modules.

4. Fill in the configuration options according to your preferences.

Libraries:

- **Use All Libraries:** Choosing all of libraries from your Jellyfin server
- **Libraries:** The libraries you want to make available to customers of this product.  
(**IMPORTANT! Start a new line for each new library**)

Example:

"Movies  
Beginner`s Programming Course  
Comedy"

**IMPORTANT!**

If you have a folder named "-", please enter it not as the first one or rename it.  
If you don't want any folder to be accessible, type "-".

## User Configuration:

- **Streaming bitrate limit:** An optional per-stream bitrate limit for all out of network devices. This is useful to prevent devices from requesting a higher bitrate than your internet connection can handle. This may result in increased CPU load on your server in order to transcode videos on the fly to a lower bitrate.
- **Remote control:** Remote control of shared devices (DLNA devices are considered shared until a user begins controlling them)
- **Media downloads:** Users can download media and store it on their devices. This is not the same as a sync feature. Book libraries require this enabled to function properly.
- **Username prefix/Username suffix:** Necessary in order to generate a username for the service, in the format: **prefix<client\_id>-<service\_id>suffix**

Allow playback (Restricting access to transcoding may cause playback failures in clients due to unsupported media formats)

- **media**
- **audio that requires transcoding**
- **video that requires transcoding**
- **video that requires conversion without re-encoding**

## Feature access:

- **Allow Live TV access**
- **Allow Live TV recording management**
- **Force transcoding of remote media sources such as Live TV**

## Media Accounts Configuration

- **Count of media accounts:** Available number of media accounts for creation by user.

## Links

- **Link to instruction:** Link to the instruction, if filled out, it will be reflected in the client

area

# Add new library/item in Emby

Emby Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

## New library:

To create a new library, you should to **create a folder** in your Emby server.

First, navigate to the root of your project "/" and enter the following commands:

```
cd mnt
```

```
mkdir LIBRARY_NAME
```

**LIBRARY\_NAME** - The name of the new library.

After creating a folder, let's create a library in Emby:

Add a new library:

emby

Scan Library Files

Assign the appropriate folder to this library:

☐ Show advanced settings

Content type:

Movies

Review the [Emby movie naming guide](#).

Display name:

Movies

**Folders**

### Library Settings

Preferred metadata download language:

Country:

Preferred image download language:

Okay

## ← Select Path

Network paths can be entered manually in the event the Network button fails to locate your devices. For example, `\\server` or `\\192.168.1.101`.

For Linux on Arch Linux, CentOS, Debian, Fedora, OpenSuse, or Ubuntu, you must grant the Emby system user at least read access to your storage locations.

Folder:

(Optional) Shared network folder:

If this folder is shared on your network, supplying the network share path can allow Emby apps on other devices to access media files directly.

Okay

## New item:

To download a new item, navigate to the root of your project "/" and enter the following commands:

```
cd mnt/LIBRARY_NAME
```

```
wget DOWNLOAD_ITEM_URL
```

**LIBRARY\_NAME** - The name of the library.

**DOWNLOAD\_ITEM\_URL** - The download URL of the item you want to upload to the server.

## After all

Scan all libraries by clicking on the "Scan All Libraries" button or by clicking on the three dots and selecting "Scan Library Files".

Overwrite package settings

☐

Overwriting the package settings is necessary to personalize the service if you need it.

Send changes to server

☐

To apply the changes on the server, it is necessary to check this checkbox.

Update

In the opened tab, you have a view of the online status of the service. The available online information includes:

- Connection status to the API
- Information about the Emby account on the **Emby** server
- Information about the account

Also, below are fields with the client's personal data.

You can also individually override package options for the client by checking the '**Overwrite package settings**' box.

After modifying the configuration options, check the '**Send changes to server**' box to save the data to the Emby server.

Username		4~187		Password		fstiYP6C		Server		emby-test.uuq.pl	
Server Group		Default (Servers: 1)		Use All Libraries		<input checked="" type="checkbox"/> select all libraries together select all libraries together					
Username prefix		em-		Libraries							
		Will be attached to the beginning of username. Only small letters and numbers and symbol "-"				IMPORTANT! Before writing any libraries here, read the instructions!					
Username suffix		-by		Streaming bitrate limit		50					
		Will be appended to the end of username. Only small letters and numbers and symbol "-"				Mbps. Please provide number from 1 to 60					
Remote control		<input checked="" type="checkbox"/> Remote control of shared devices Remote control of shared devices		Media downloads		<input checked="" type="checkbox"/> Users can download media and store it on their devices. This is not the same as a sync feature. Book libraries require this enabled to function properly. Users can download media and store it on their devices. This is not the same as a sync feature. Book libraries require this enabled to function properly.					
Allow Playback Media		<input checked="" type="checkbox"/>		Allow Playback Audio		<input checked="" type="checkbox"/> audio that requires transcoding audio that requires transcoding
