

Service configuration

Emby Family module **WISECP**

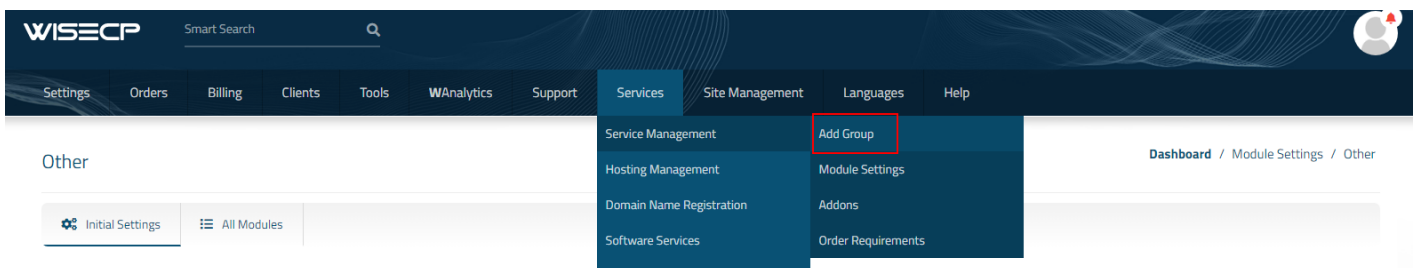

[Order now](#) | [Download](#) | [FAQ](#)

If you do not have a **Service Group** where you want to place the new service, you need to create a new **Service Group**

1. Log in to the admin area of your **WISECP**.
2. Create New Service Group

Go to

Services -> Service Management -> Add Group

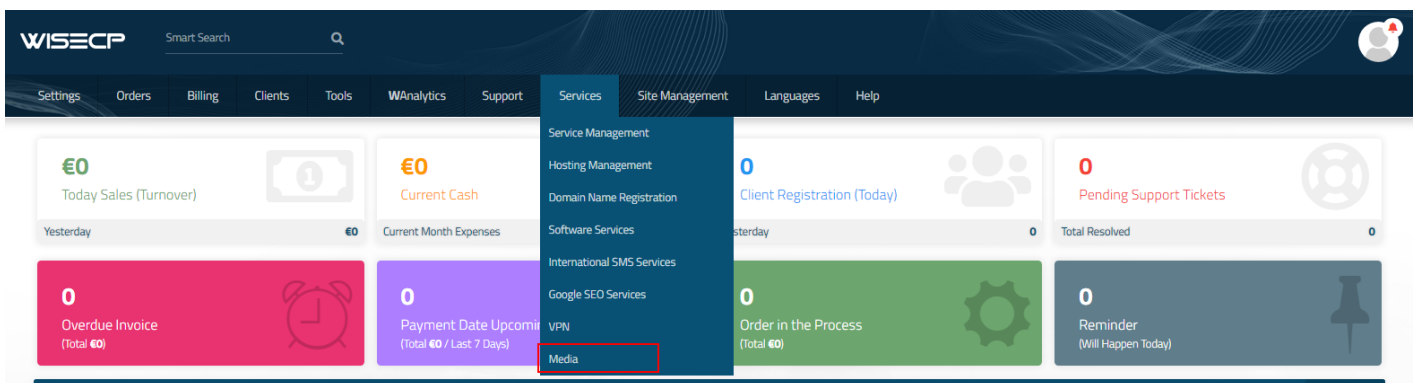

Enter all the necessary data and click the **'Create Group'** button.

The screenshot shows the 'Create New Service Group' form in the WISECP system. At the top, there is a navigation bar with the WISECP logo, a search bar, and various menu items: Settings, Orders, Billing, Clients, Tools, WAnalytics, Support, Services, Site Management, Languages, and Help. The page title is 'Create New Service Group' and the breadcrumb is 'Dashboard / Create New Service Group'. A green banner at the top of the form area says: 'Create a new service group, you can also create new categories and manage the existing one from here.' Below this is a language selection bar with options: EN, UK, RU, RO, PT, PL, NL, LV, KA, IT, ID, HU, FR, FA, ES, EL, DE, CS, BS, AR. The form fields are: Title (Media), Short Detail (Short Group Description), Listing Template (Box List selected, Horizontal List unselected), Status (Enable), Background Image (optional), Group Colour (#FFFFFF), Order Upgrades (checkbox for 'Allow clients to upgrade to higher package in the same service group'), and External HTML Code (with a note: 'You can optionally add external HTML code and customize it. There should not be any incorrect or incomplete HTML codes, otherwise page structure will be empty').

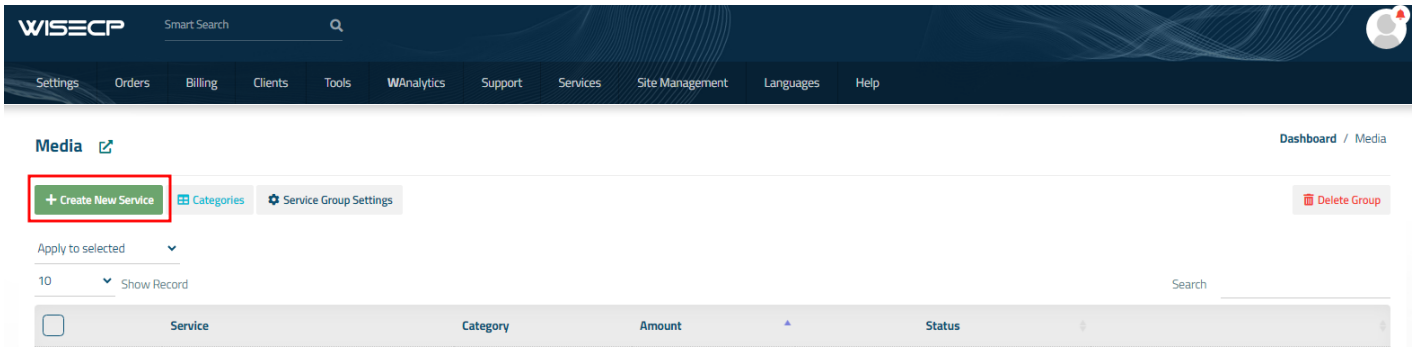

3. Adding a New Service

Go to

Services -> our service group where you need to add the new service.

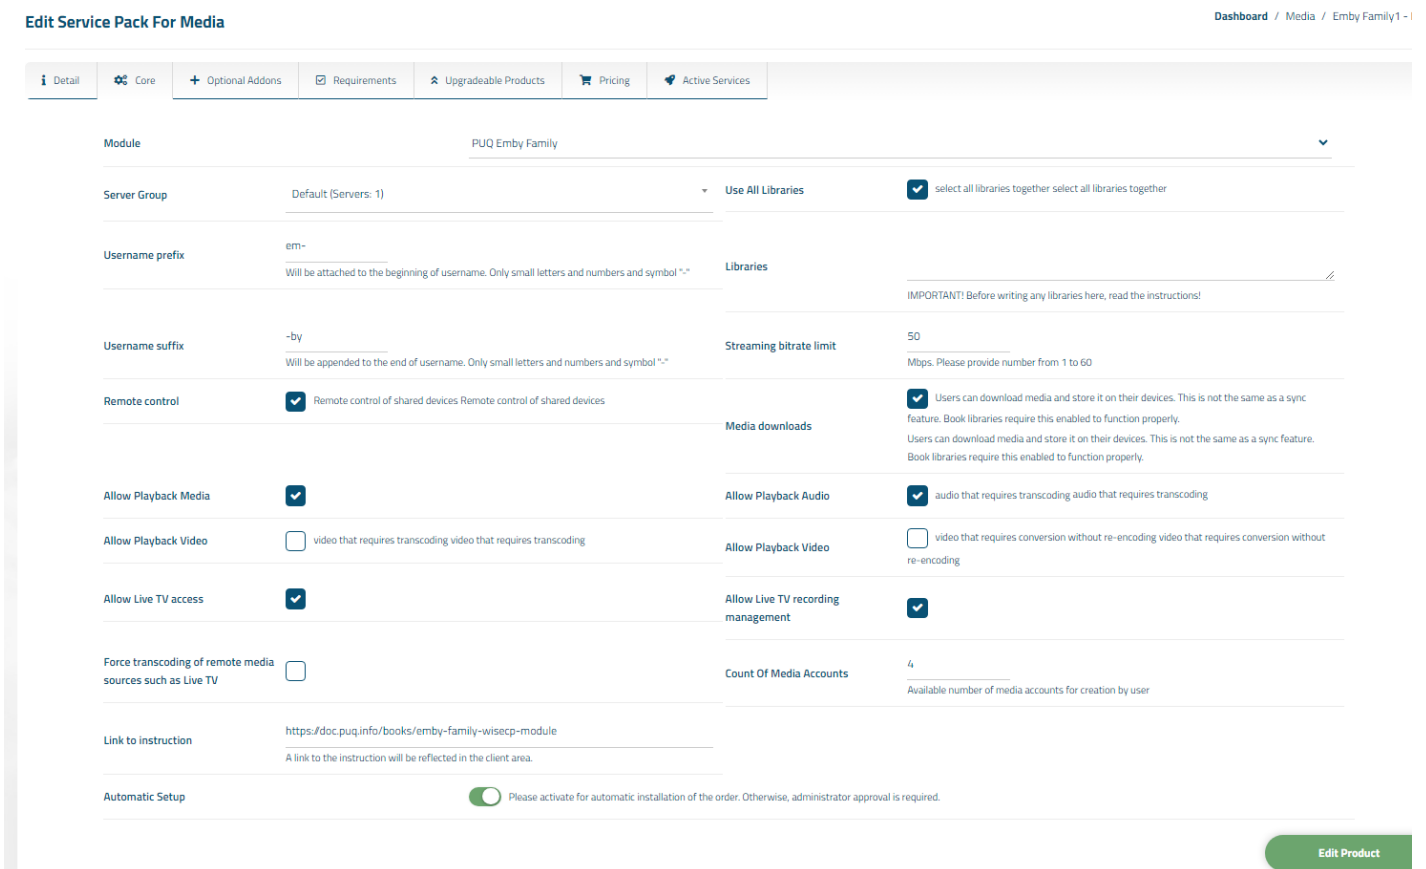

In the opened window, click the **'Create New Service'** button.

On the opened page, enter all the necessary details for your new service and navigate to the 'Core' tab.

Select the 'PUQ Emby Family' module from the drop-down list of modules.

4. Fill in the configuration options according to your preferences.

Libraries:

- **Use All Libraries:** Choosing all of libraries from your Jellyfin server
- **Libraries:** The libraries you want to make available to customers of this product. **(IMPORTANT! Start a new line for each new library)**

Example:

"Movies
Beginner`s Programming Course
Comedy"

IMPORTANT!

If you have a folder named "-", please enter it not as the first one or rename it.
If you don't want any folder to be accessible, type "-".

User Configuration:

- **Streaming bitrate limit:** An optional per-stream bitrate limit for all out of network devices. This is useful to prevent devices from requesting a higher bitrate than your internet connection can handle. This may result in increased CPU load on your server in order to transcode videos on the fly to a lower bitrate.
- **Remote control:** Remote control of shared devices (DLNA devices are considered shared until a user begins controlling them)
- **Media downloads:** Users can download media and store it on their devices. This is not the same as a sync feature. Book libraries require this enabled to function properly.
- **Username prefix/Username suffix:** Necessary in order to generate a username for the service, in the format: **prefix<client_id>-<service_id>suffix**

Allow playback (Restricting access to transcoding may cause playback failures in clients due to unsupported media formats)

- **media**
- **audio that requires transcoding**
- **video that requires transcoding**
- **video that requires conversion without re-encoding**

Feature access:

- **Allow Live TV access**
- **Allow Live TV recording management**
- **Force transcoding of remote media sources such as Live TV**

Media Accounts Configuration

- **Count of media accounts:** Available number of media accounts for creation by user.

Links

- **Link to instruction:** Link to the instruction, if filled out, it will be reflected in the client

area
