How to Clean Up (Remove) a Module

PUQcloud Panel

Order Now | Download | FAQ

Overview

The **Clean Up** function completely removes a module from the PUQcloud system.
This includes deleting all related database records, configurations, and references.

Use this only for **non-activated modules**.

Steps to Clean Up a Module

1. Navigate to **Dashboard → Modules**.
2. Make sure the module is **INACTIVE**.
3. Click the **trash can (🗑)** icon next to it.
4. The system performs a **Clean Up**, which:
   - Deletes all module-related tables and data.
   - Removes configuration and system references.
   - Clears the registry of the module completely.

Important

If the same module is installed again later, it will:

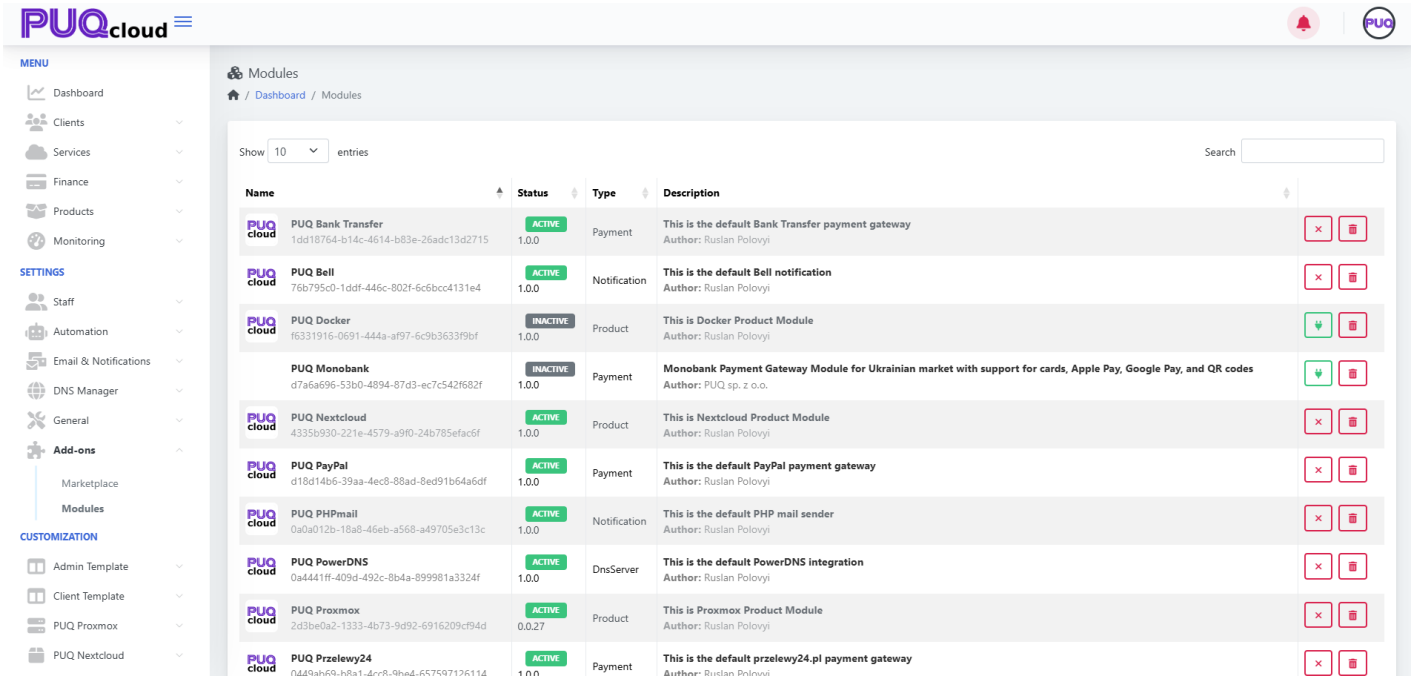

- Receive a **new unique ID**.
- Be treated as a **fresh installation**.

Result

The module is permanently removed from PUQcloud.

No data remains in the system.
