

How to Clean Up (Remove) a Module

PUQcloud Panel

[Order Now](#) | [Download](#) | [FAQ](#)

Overview

The **Clean Up** function completely removes a module from the PUQcloud system. This includes deleting all related database records, configurations, and references.

Use this only for **non-activated modules**.

Steps to Clean Up a Module

1. Navigate to **Dashboard → Modules**.
 2. Make sure the module is **INACTIVE**.
 3. Click the **trash can** (🗑️) icon next to it.
 4. The system performs a **Clean Up**, which:
 - Deletes all module-related tables and data.
 - Removes configuration and system references.
 - Clears the registry of the module completely.
-

Important

If the same module is installed again later, it will:

- Receive a **new unique ID**.
 - Be treated as a **fresh installation**.
-

Result

The module is permanently removed from PUQcloud.

No data remains in the system.

Example

The screenshot displays the PUC cloud interface. On the left is a navigation menu with sections: MENU (Dashboard, Clients, Services, Finance, Products, Monitoring), SETTINGS (Staff, Automation, Email & Notifications, DNS Manager, General), Add-ons (Marketplace, Modules), and CUSTOMIZATION (Admin Template, Client Template, PUC Proxmox, PUC Nextcloud). The main content area is titled 'Modules' and shows a list of 10 entries. Each entry includes a PUC cloud logo, Name, ID, Status, Type, Description, and action buttons (delete, refresh, add).

Name	Status	Type	Description
PUQ Bank Transfer 1dd18764-b14c-4614-b83e-26adc13d2715	ACTIVE 1.0.0	Payment	This is the default Bank Transfer payment gateway Author: Ruslan Poloviyi
