Jellyfin Family WHMCS module

This module enables your company to offer public media services to customers through Jellyfin accounts. It facilitates the creation of customer accounts on a pre-configured Jellyfin server, allowing for the sale of various media packages at different prices. Moreover, it includes the functionality to add multiple media accounts for a single service. This feature enables customers to manage multiple Jellyfin accounts under one subscription. The module requires a pre-installed Jellyfin server and uses the Jellyfin API for client account management. It also supports multiple languages. Administrators can suspend, terminate, or unsuspend users, change user passwords, and more, while clients can manage their devices and libraries.

- Product Information

Description

Jellyfin Family module **WHMCS**

Thanks to the module, the company can now offer public media services to its customers based on Jellyfin accounts with added flexibility.

The module facilitates the creation of customer accounts on a pre-prepared Jellyfin server. Now, it empowers users to define and manage multiple media accounts, allowing for more tailored offerings and increased customer satisfaction. Each account corresponds to a selected package, enabling customers to access varied media content at different price points. Notably, clients can now possess multiple independent media accounts, broadening their media access options.

> For the correct operation of the module, a pre-prepared Jellyfin installation is required (the module does not assist in the installation of the Jellyfin server and assumes that such installation is ready for operation through API.) Module use Jellyfin API to manage clients account.

> We have prepared a detailed installation manual for the module, including all the steps needed to implement the module, including the preparation of the Jellyfin server, including all installation steps such as PHP, Jellyfin, SSL certificates etc.

Functions:

- Auto create and deploy client account
- Multi-Account Support: Enable users to manage multiple media accounts within a single service
- The module uses only the API to manage the accounts
- Module supports multilingualism **(Arabic, Azerbaijani, Catalan, Chinese, Croatian, Czech, Danish, Dutch, English, Estonian, Farsi, French, German, Hebrew, Hungarian, Italian, Macedonian, Norwegian, Polish, Romanian, Spanish, Swedish, Turkish, Ukrainian)**
- The module shows all user info: enabled user libraries, active devices etc.
- Link to instructions for setting up the service in the client area.

Available options in the admin panel:

- Create users
- Suspend users
- Terminate users
- Unsuspend users
- Change users password
- Change Package
- Drop all devices
- Unblock user
- API connection status
- List of active devices
- List of enabled user libraries
- List of Media Accounts

Available options in the client panel:

- List of active devices
- List of enabled user libraries
- Drop all devices
- Unblock user
- Change the Jellyfin user password
- Add/Management/Delete Media Account
- Drop Account Devices
- List of Media Accounts

WHMCS minimal version: 8 +

Changelog

Jellyfin Family module **WHMCS**

v1.3.2 Released 13-08-2024

1. Fixed bug with password, when "Show password" is "no"
2. Fixed a bug with sub-accounts. Now, if the number of media accounts equals 0, when "Change package" is clicked, the sub-accounts are removed.

v1.3.1 Released 31-07-2024

1. Fixed a bug with adding sub-accounts when the allowed count of media sub-accounts is 0

v1.3 Released 31-07-2024

1. Fixed bug with header template
2. Fixed bug with updating sub-account password in database

v1.2 Released 12-07-2024

1. Client area more adapted for mobile version
2. Buttons for copying login and password have been added to the client area
3. Fixed bug with edit sub-account

v1.1 Released 15-05-2024

1. Fixed a bug where purchasing a new service would alter the parameters of all accounts on the server.
2. Translate some phrases

3. Some changes in client area

v1.0 Released 02-05-2024

Installation and configuration guide

WHMCS setup(install/update)

Jellyfin Family module **WHMCS**

Order now | Download | FAQ

To install and update a module, you must perform one and the same action.

1. Download the latest version of the module.

PHP 8.1

```
wget http: //download. puqcloud. com/WHMCS/servers/PUQ_WHMCS-Jellyfin-Family/PUQ_WHMCS-Jellyfin-
Family-latest. zip
```

PHP 7.4

```
wget https: //download. puqcloud. com/WHMCS/servers/PUQ_WHMCS-Jellyfin-Family/php74/PUQ_WHMCS-
Jellyfin-Family-latest. zip
```

All versions are available via link:

http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Jellyfin-Family/

2. Unzip the archive with the module.

```
unzip PUQ_WHMCS-Jellyfin-Family-latest. zip
```

3. Copy and Replace "puqJellyfinFamily" to "WHMCS_WEB_DIR/modules/servers/"

Setup guide: Jellyfin setup

Jellyfin Family module **WHMCS**

Order now | Download | FAQ

1. Install Jellyfin on your server

To simplify deployment and help automate this for as many users as possible, we provide a BASH script to handle repo installation as well as installing Jellyfin. All you need to do is run this command on your system

```
wget -O- https://repo.jellyfin.org/install-debuntu.sh | sudo bash
```

2. SSL certificate generation:

```
sudo apt install nginx certbot python3-certbot-nginx
```

```
sudo certbot --nginx --agree-tos --redirect --hsts --staple-ocsp --email YOUR_EMAIL -d
DOMAIN_NAME
```

```
echo "0 0 * * *  root  certbot renew --quiet --no-self-upgrade --post-hook 'systemctl reload
nginx'" | sudo tee -a /etc/cron.d/renew_certbot
```

3. Configure nginx from a subdomain

Create a file named jellyfin.conf.

```
cd /etc/nginx/conf.d/
nano jellyfin.conf
```

Then, insert the following text, replacing DOMAIN_NAME with your domain.

```
# Uncomment the commented sections after you have acquired a SSL Certificate
server {
 listen 80;
 listen [::]:80;
 server_name DOMAIN_NAME;

 # Uncomment to redirect HTTP to HTTPS
 return 301 https://$host$request_uri;
}

server {
 listen 443 ssl http2;
 listen [::]:443 ssl http2;
 server_name DOMAIN_NAME;

 ## The default `client_max_body_size` is 1M, this might not be enough for some posters, etc.
 client_max_body_size 20M;

 # use a variable to store the upstream proxy
 # in this example we are using a hostname which is resolved via DNS
 # (if you aren't using DNS remove the resolver line and change the variable to point to an IP
 address e.g `set $jellyfin 127.0.0.1`)
 set $jellyfin 127.0.0.1;
 resolver 127.0.0.1 valid=30;

 ssl_certificate /etc/letsencrypt/live/DOMAIN_NAME/fullchain.pem;

Jellyfin Family module **WHMCS**

Order now | Download | FAQ

1. Download the latest version of the module.

PHP 8.1

```
wget https: //download. puqcloud. com/WHMCS/servers/PUQ_WHMCS-Jellyfin-Family/PUQ_WHMCS-Jellyfin-
Family-latest. zip
```

PHP 7.4

```
wget https: //download. puqcloud. com/WHMCS/servers/PUQ_WHMCS-Jellyfin-Family/php74/PUQ_WHMCS-
Jellyfin-Family-latest. zip
```

All versions are available via link:

http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-Jellyfin-Family/

2. Unzip the archive with the module.

```
unzip PUQ_WHMCS-Jellyfin-Family-latest. zip
```

3. Copy "puqJellyfinFamily" to "WHMCS_WEB_DIR/modules/servers/"

4. Create new server Jellyfin in WHMCS (System Settings->Products/Services->Servers)

```
System Settings->Servers->Add New Server
```

- Enter the correct **Name** and **Hostname**

- In the **Server Details** section, select the "**PUQ Jellyfin Family**" module and enter the correct **username**, **password** and **access hash (API key)** for the **Jellyfin web interface**.
- To check, click the **"Test connection"** button

5. Create a new Products/Services

```
System Settings->Products/Services->Create a New Product
```

In the **Module settings** section, select the **"PUQ Jellyfin Family"** module

  Comedy"
  IMPORTANT!
  If you have a folder named "-", please enter it not as the first one or rename it.
  If you don't want any folder to be accessible, type "-".

User Configuration:

- **Streaming bitrate limit:** An optional per-stream bitrate limit for all out of network devices. This is useful to prevent devices from requesting a higher bitrate than your internet connection can handle. This may result in increased CPU load on your server in order to transcode videos on the fly to a lower bitrate.
- **SyncPlay access:** The SyncPlay feature enables to sync playback with other devices. Select the level of access this user has to the SyncPlay
- **Remote control:** Remote control of shared devices (DLNA devices are considered shared until a user begins controlling them)
- **Media downloads:** Users can download media and store it on their devices. This is not the same as a sync feature. Book libraries require this enabled to function properly.
- **User sessions:** Set the maximum number of simultaneous user sessions.
  A value of 0 will disable the feature.
- **Failed login attempts:** Determine how many incorrect login tries can be made before lockout occurs.
  A value of zero means inheriting the default of three tries for normal users and five for administrators. Setting this to -1 will disable the feature.
- **Username prefix/Username suffix:** Necessary in order to generate a username for the service, in the format: **prefix<client_id>-<service_id>suffix**

Allow playback (Restricting access to transcoding may cause playback failures in clients due to unsupported media formats)

- **media**
- **audio that requires transcoding**
- **video that requires transcoding**
- **video that requires conversion without re-encoding**

Add new library/item in Jellyfin

Jellyfin Family module **WHMCS**

Order now | Download | FAQ

New library:

To create a new library, you should to **create a folder** in your jellyfin server.

First, navigate to the root of your project "/" and enter the following commands:

```
cd mnt
```

```
mkdir LIBRARY_NAME
```

LIBRARY_NAME - The name of the new library.

After creating a folder, let's create a library in Jellyfin:

Add a new library:
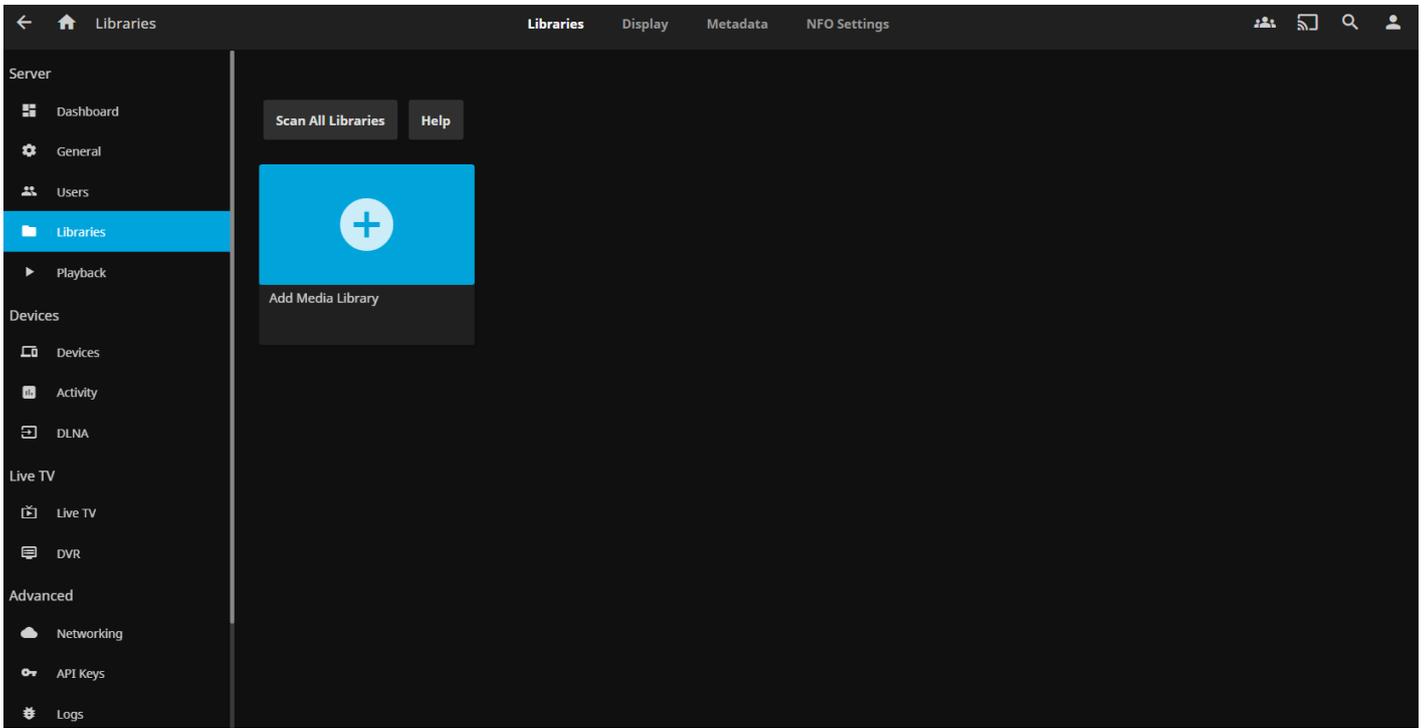

Assign the appropriate folder to this library:

For Linux on Arch Linux, CentOS, Debian, Fedora, openSUSE, or Ubuntu, you must grant the service user at least read access to your storage locations.

Folder:

/mnt/movies 🔍

... →

Shared network folder:

If this folder is shared on your network, supplying the network share path can allow clients on other devices to access media files directly. For example, **\\server** or **\\192.168.1.101**.

Ok
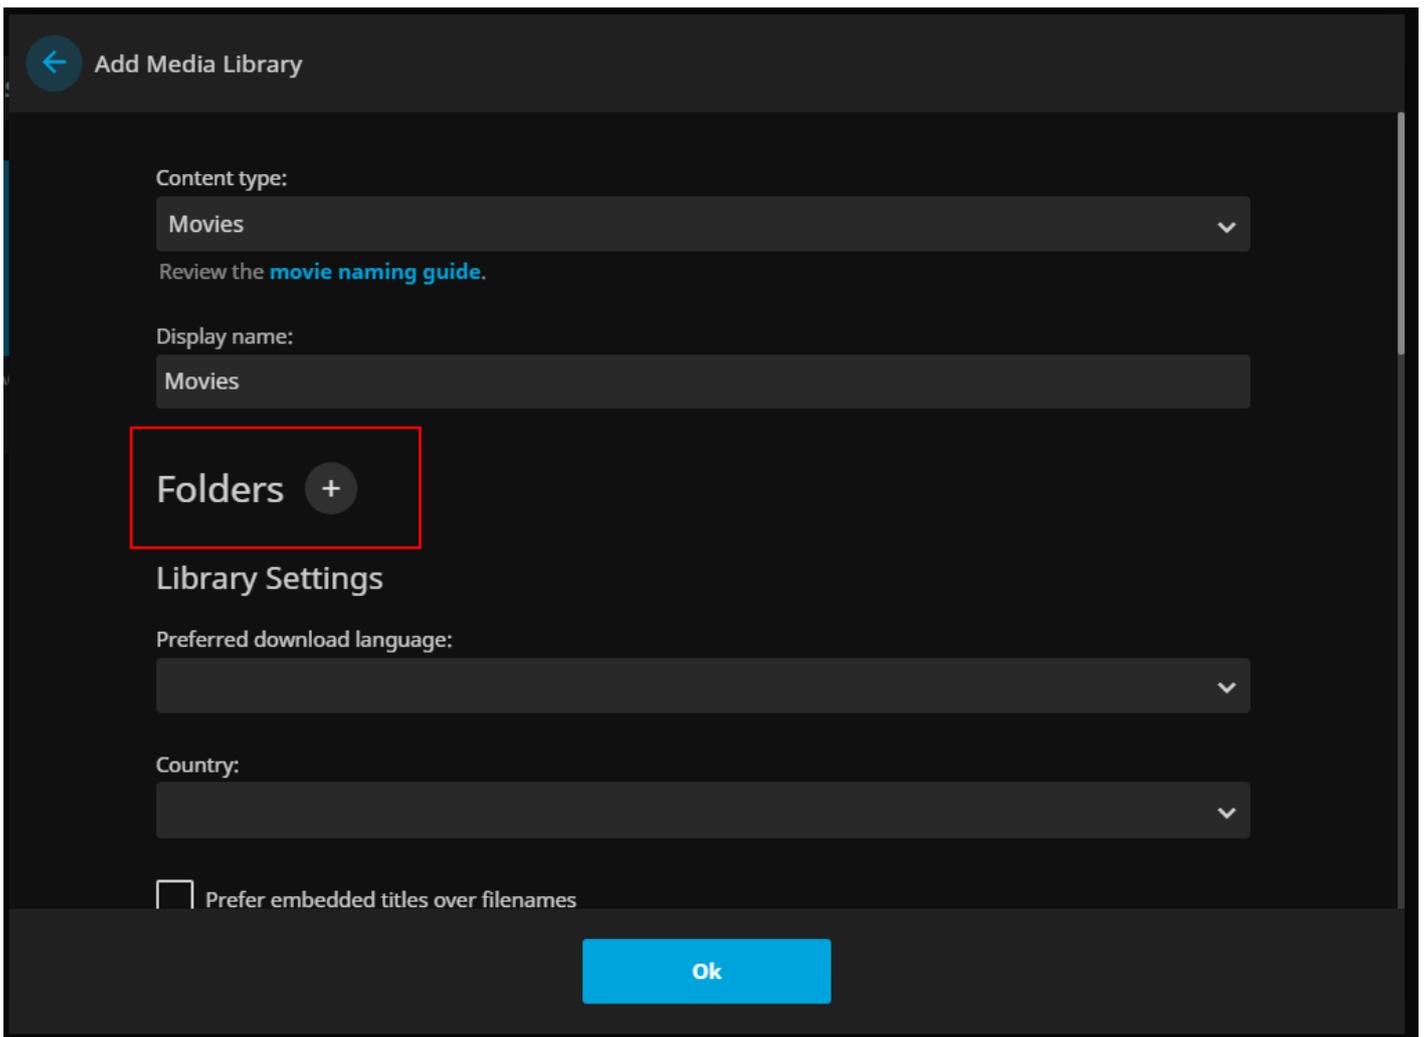

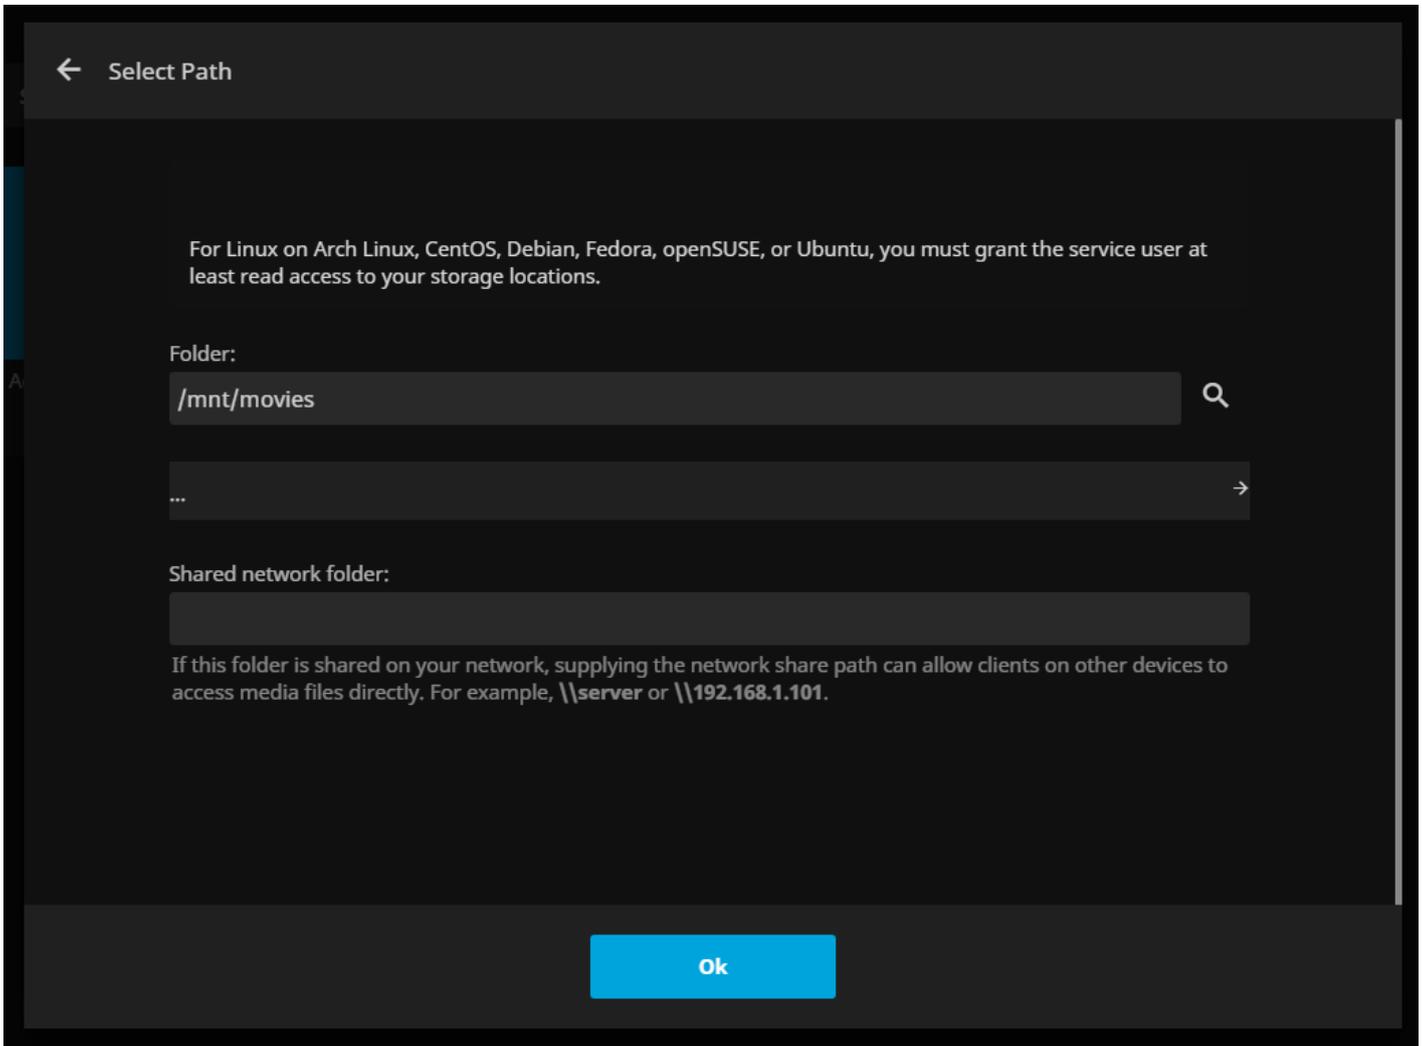

New item:

To download a new item, navigate to the root of your project "/" and enter the following commands:

```
cd mnt/LIBRARY_NAME
```

```
wget DOWNLOAD_ITEM_URL
```

LIBRARY_NAME - The name of the library.

DOWNLOAD_ITEM_URL - The download URL of the item you want to upload to the server.

After all

Scan all libraries by clicking on the "Scan All Libraries" button or scan the specific library by clicking on the three dots and selecting "Scan Library".
