

Description

Jellyfin Family module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#)

Thanks to the module, the company can now offer public media services to its customers based on Jellyfin accounts with added flexibility.

The module facilitates the creation of customer accounts on a pre-prepared Jellyfin server. Now, it empowers users to define and manage multiple media accounts, allowing for more tailored offerings and increased customer satisfaction. Each account corresponds to a selected package, enabling customers to access varied media content at different price points. Notably, clients can now possess multiple independent media accounts, broadening their media access options.

For the correct operation of the module, a pre-prepared Jellyfin installation is required (the module does not assist in the installation of the Jellyfin server and assumes that such installation is ready for operation through API.) Module use Jellyfin API to manage clients account.

We have prepared a detailed installation manual for the module, including all the steps needed to implement the module, including the preparation of the Jellyfin server, including all installation steps such as PHP, Jellyfin, SSL certificates etc.

Functions:

- Auto create and deploy client account
- Multi-Account Support: Enable users to manage multiple media accounts within a single service
- The module uses only the API to manage the accounts
- Module supports multilingualism (**Arabic, Azerbaijani, Catalan, Chinese, Croatian, Czech, Danish, Dutch, English, Estonian, Farsi, French, German, Hebrew, Hungarian, Italian, Macedonian, Norwegian, Polish, Romanian, Spanish, Swedish, Turkish, Ukrainian**)
- The module shows all user info: enabled user libraries, active devices etc.

- [Link to instructions for setting up the service in the client area.](#)

Available options in the admin panel:

- Create users
- Suspend users
