

Jellyfin Family

WISECP module

This module enables your company to offer public media services to customers through Jellyfin accounts. It facilitates the creation of customer accounts on a pre-configured Jellyfin server, allowing for the sale of various media packages at different prices. Moreover, it includes the functionality to add multiple media accounts for a single service. This feature enables customers to manage multiple Jellyfin accounts under one subscription. The module requires a pre-installed Jellyfin server and uses the Jellyfin API for client account management. It also supports multiple languages. Administrators can suspend, terminate, or unsuspend users, change user passwords, and more, while clients can manage their devices and libraries.

Description

Jellyfin Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

Thanks to the module, the company is able to offer public media services to its customers based on Jellyfin accounts.

The module is used to create customer accounts on the previously prepared Jellyfin server. The module enables You to define multiple public media packages and sell them at different prices. The module creates a customer account according to the selected package. The client can have many independent accounts in the media. Now, it empowers users to define and manage multiple media accounts, allowing for more tailored offerings and increased customer satisfaction.

For the correct operation of the module, a pre-prepared Jellyfin installation is required (the module does not assist in the installation of the Jellyfin server and assumes that such installation is ready for operation through API.) Module use Jellyfin API to manage clients account.

We have prepared a detailed installation manual for the module, including all the steps needed to implement the module, including the preparation of the Jellyfin server, including all installation steps such as PHP, Jellyfin, SSL certificates etc.

Requirements:

WISECP: v3.1.5+, php: v8.x, Ioncube: V12+

Jellyfin: v10+

Functions:

- Auto create and deploy client account
- Multi-Account Support: Enable users to manage multiple media accounts within a single service
- The module uses only the API to manage the accounts

- Module supports multilingualism (**Arabic, Bosnian, Czech, German, Greek, English, Spanish, Persian, French, Hungarian, Indonesian, Italian, Georgian, Latvian, Dutch, Polish, Portuguese, Romanian, Ukrainian**)
- The module shows all user info: enabled user libraries, active devices etc.
- Link to instructions for setting up the service in the client area.

Available options in the admin panel:

- Create users
- Suspend users
- Terminate users
- Unsuspend users
- Change users password
- Change Package
- Drop all devices
- Unblock user
- API connection status
- List of active devices
- List of enabled user libraries
- List of Media Accounts

Available options in the client panel:

- List of active devices
- List of enabled user libraries
- Drop all devices
- Unblock user
- Change the Jellyfin user password
- Add/Management/Delete Media Account
- Drop Account Devices
- List of Media Accounts

Installation and configuration guide

Setup (install/update)

Jellyfin Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

To install and update a module, you must perform one and the same action.

1. Download the latest version of the module.

php 8.1

```
wget http://download.puqcloud.com/WISECP/Product/PUQ_WISECP-Jellyfin-Family/php81/PUQ_WISECP-Jellyfin-Family-latest.zip
```

php 8.2

```
wget http://download.puqcloud.com/WISECP/Product/PUQ_WISECP-Jellyfin-Family/php82/PUQ_WISECP-Jellyfin-Family-latest.zip
```

All versions are available: https://download.puqcloud.com/WISECP/Product/PUQ_WISECP-Jellyfin-Family/

2. Unzip the archive with the module.

```
unzip PUQ_WISECP-Jellyfin-Family-latest.zip
```

3. Copy and Replace "puqJellyfinFamily" from "PUQ_WISECP-Jellyfin-

Family" to "WISECP_WEB_DIR/coremio/modules/Product/"

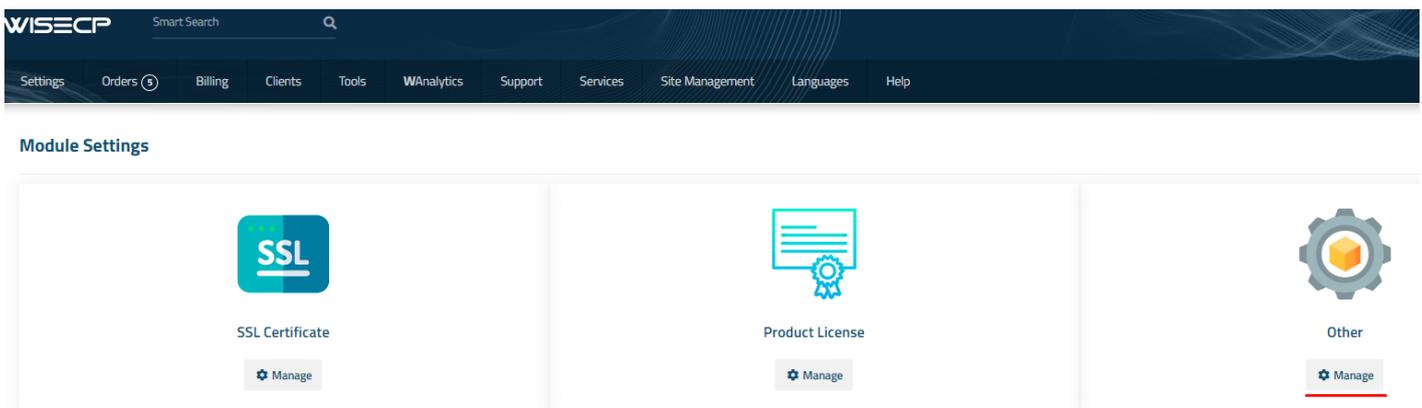

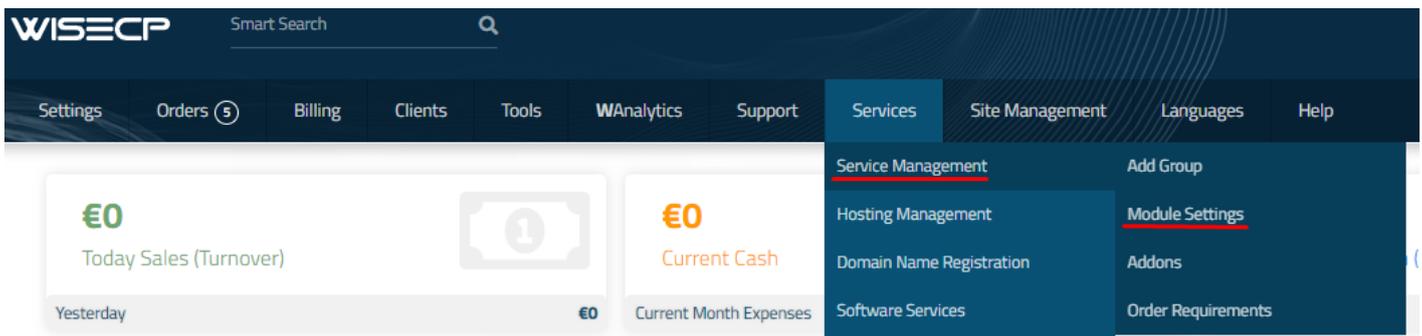

License Activation

Setup guide: Jellyfin setup

Jellyfin Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

1. Install Jellyfin on your server

To simplify deployment and help automate this for as many users as possible, we provide a BASH script to handle repo installation as well as installing Jellyfin. All you need to do is run this command on your system

```
wget -O- https://repo.jellyfin.org/install-debuntu.sh | sudo bash
```

2. SSL certificate generation:

```
sudo apt install nginx certbot python3-certbot-nginx
```

```
sudo certbot --nginx --agree-tos --redirect --hsts --staple-ocsp --email YOUR_EMAIL -d  
DOMAIN_NAME
```

```
echo "0 0 * * * root certbot renew --quiet --no-self-upgrade --post-hook 'systemctl reload  
nginx'" | sudo tee -a /etc/cron.d/renew_certbot
```

3. Configure nginx from a subdomain

Create a file named jellyfin.conf.

```
cd /etc/nginx/conf.d/  
nano jellyfin.conf
```

Then, insert the following text, replacing **DOMAIN_NAME** with your domain.

```
# Uncomment the commented sections after you have acquired a SSL Certificate
server {
    #listen 80;
    #listen [::]:80;
    #server_name DOMAIN_NAME;

    # Uncomment to redirect HTTP to HTTPS
    #return 301 https://$host$request_uri;
}

server {
    #listen 443 ssl http2;
    #listen [::]:443 ssl http2;
    #server_name DOMAIN_NAME;

    ### The default `client_max_body_size` is 1M, this might not be enough for some posters, etc.
    #client_max_body_size 20M;

    # use a variable to store the upstream proxy
    # in this example we are using a hostname which is resolved via DNS
    # (if you aren't using DNS remove the resolver line and change the variable to point to an IP
    address e.g `set $jellyfin 127.0.0.1`)
    #set $jellyfin 127.0.0.1;
    #resolver 127.0.0.1 valid=30;

    #ssl_certificate /etc/letsencrypt/live/DOMAIN_NAME/fullchain.pem;
    #ssl_certificate_key /etc/letsencrypt/live/DOMAIN_NAME/privkey.pem;

Service configuration

Jellyfin Family module **WISECP**

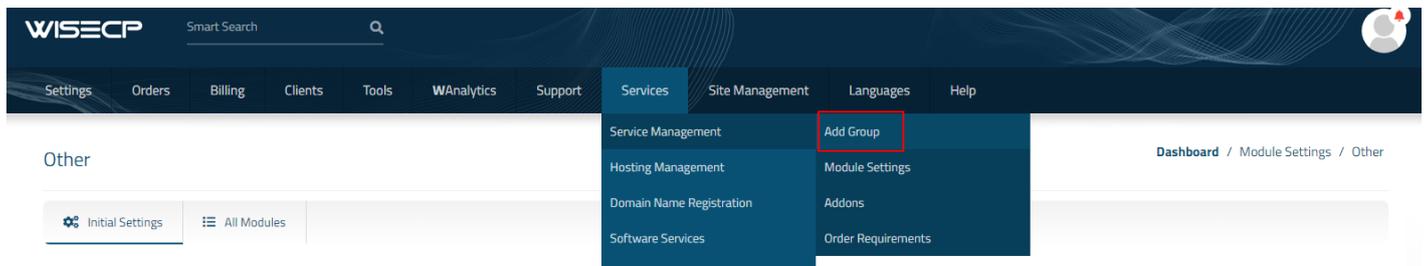

[Order now](#) | [Download](#) | [FAQ](#)

If you do not have a **Service Group** where you want to place the new service, you need to create a new **Service Group**

1. Log in to the administrative area of your **WISECP**.
2. Create New Service Group

Go to

Services -> Service Management -> Add Group

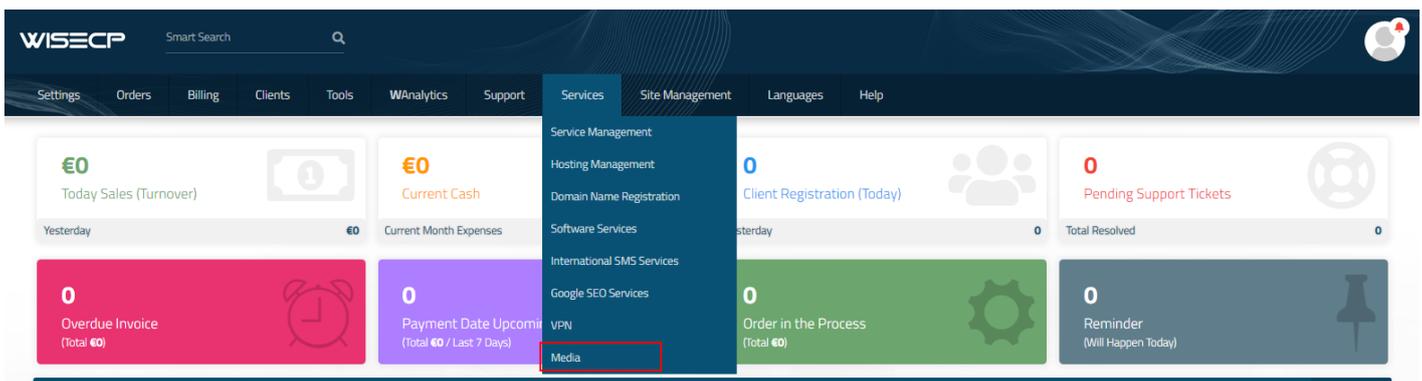

Enter all the necessary data and click the **'Create Group'** button.

The screenshot shows the 'Create New Service Group' form in the WISECP dashboard. At the top, there is a navigation bar with the WISECP logo, a search bar, and various menu items: Settings, Orders, Billing, Clients, Tools, WAnalytics, Support, Services, Site Management, Languages, and Help. The page title is 'Create New Service Group' and the breadcrumb is 'Dashboard / Create New Service Group'. A green banner at the top of the form area says: 'Create a new service group, you can also create new categories and manage the existing one from here.' Below this is a language selection bar with options: EN, UK, RU, RO, PT, PL, NL, LV, KA, IT, ID, HU, FR, FA, ES, EL, DE, CS, BS, AR. The form fields are: Title (Media), Short Detail (Short Group Description), Listing Template (Box List selected, Horizontal List unselected), Status (Enable), Background Image (optional), Group Colour (#FFFFFF), Order Upgrades (checkbox for 'Allow clients to upgrade to higher package in the same service group'), and External HTML Code (with a note: 'You can optionally add external HTML code and customize it. There should not be any incorrect or incomplete HTML codes, otherwise page structure will be empty').

3. Adding a New Service

Go to

Services -> our service group where you need to add the new service.

In the opened window, click the **'Create New Service'** button.

Automatic Setup Please activate for automatic installation of the order. Otherwise, administrator approval is required.

Create Product

4. Fill in the configuration options according to your preferences.

Libraries:

- **Use All Libraries:** Choosing all of libraries from your Jellyfin server
- **Libraries:** The libraries you want to make available to customers of this product.
(IMPORTANT! Start a new line for each new library)

Example:

"Movies

Beginner`s Programming Course

Comedy"

IMPORTANT!

If you have a folder named "-", please enter it not as the first one or rename it.

If you don't want any folder to be accessible, type "-".

User Configuration:

- **Streaming bitrate limit:** An optional per-stream bitrate limit for all out of network devices. This is useful to prevent devices from requesting a higher bitrate than your internet connection can handle. This may result in increased CPU load on your server in order to transcode videos on the fly to a lower bitrate.
- **SyncPlay access:** The SyncPlay feature enables to sync playback with other devices. Select the level of access this user has to the SyncPlay
- **Remote control:** Remote control of shared devices (DLNA devices are considered shared until a user begins controlling them)
- **Media downloads:** Users can download media and store it on their devices. This is not the same as a sync feature. Book libraries require this enabled to function properly.
- **User sessions:** Set the maximum number of simultaneous user sessions.
A value of 0 will disable the feature.
- **Failed login attempts:** Determine how many incorrect login tries can be made before lockout occurs.
A value of zero means inheriting the default of three tries for normal users and five for administrators. Setting this to -1 will disable the feature.
- **Username prefix/Username suffix:** Necessary in order to generate a username for the service, in the format: **prefix<client_id>-<service_id>suffix**

Allow playback (Restricting access to transcoding may cause playback failures in clients due to unsupported media formats)

- **media**
- **audio that requires transcoding**
- **video that requires transcoding**
- **video that requires conversion without re-encoding**

Feature access:

- **Allow Live TV access**
- **Allow Live TV recording management**
- **Force transcoding of remote media sources such as Live TV**

Media Accounts Configuration:

- **Count of media accounts:** Available number of media accounts for creation by user.

Links

- **Link to instruction:** Link to the instruction, if filled out, it will be reflected in the client area

Add new library/item in Jellyfin

Jellyfin Family module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

New library:

To create a new library, you should to **create a folder** in your jellyfin server.

First, navigate to the root of your project "/" and enter the following commands:

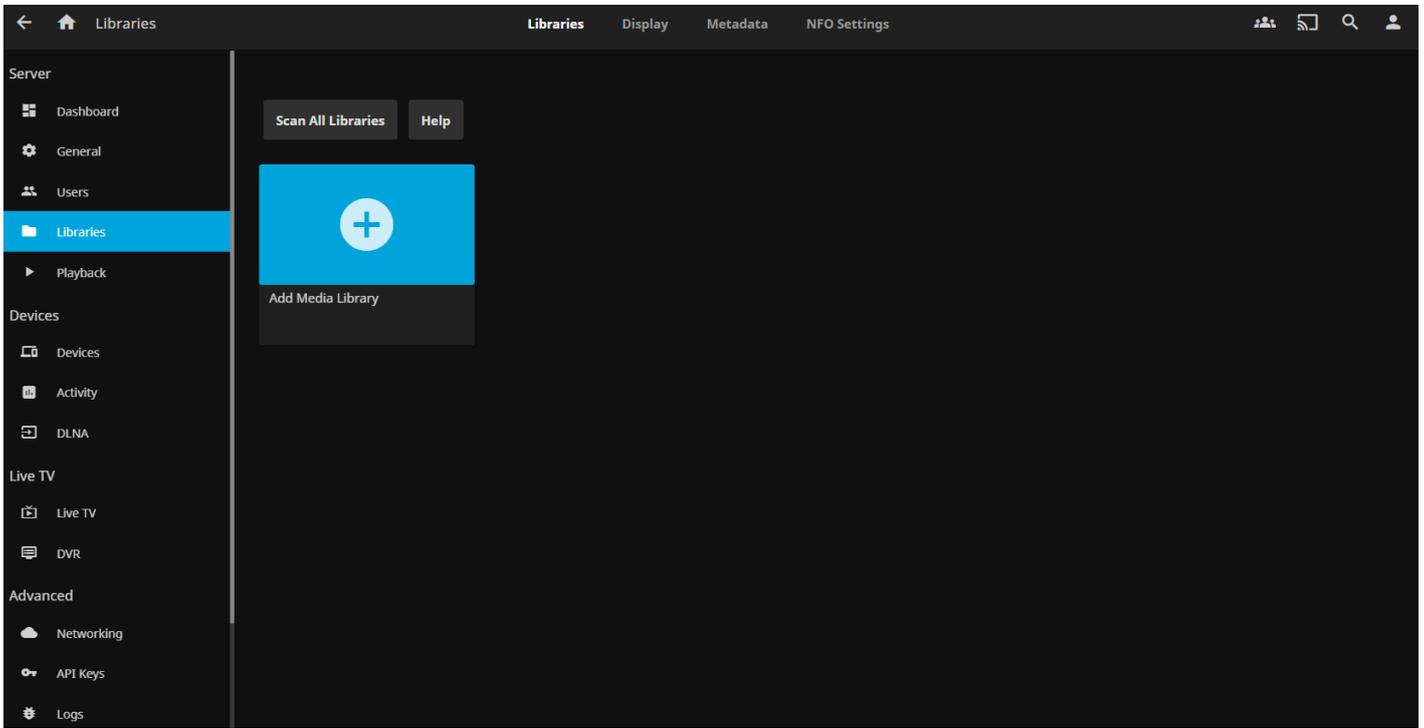

```
cd mnt
```

```
mkdir LIBRARY_NAME
```

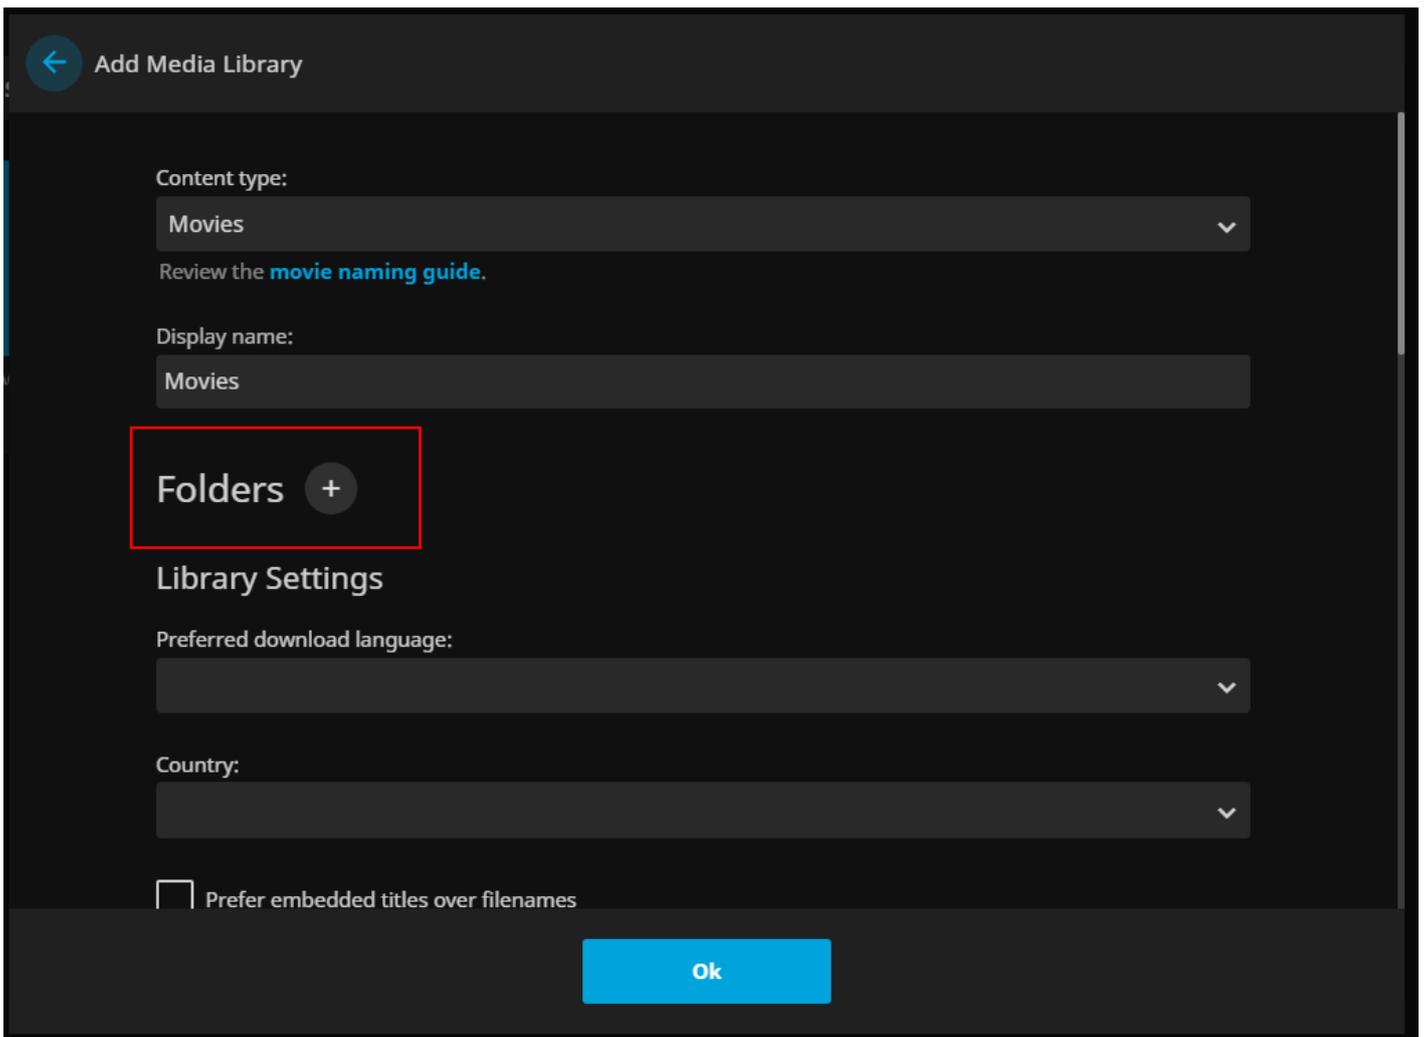

LIBRARY_NAME - The name of the new library.

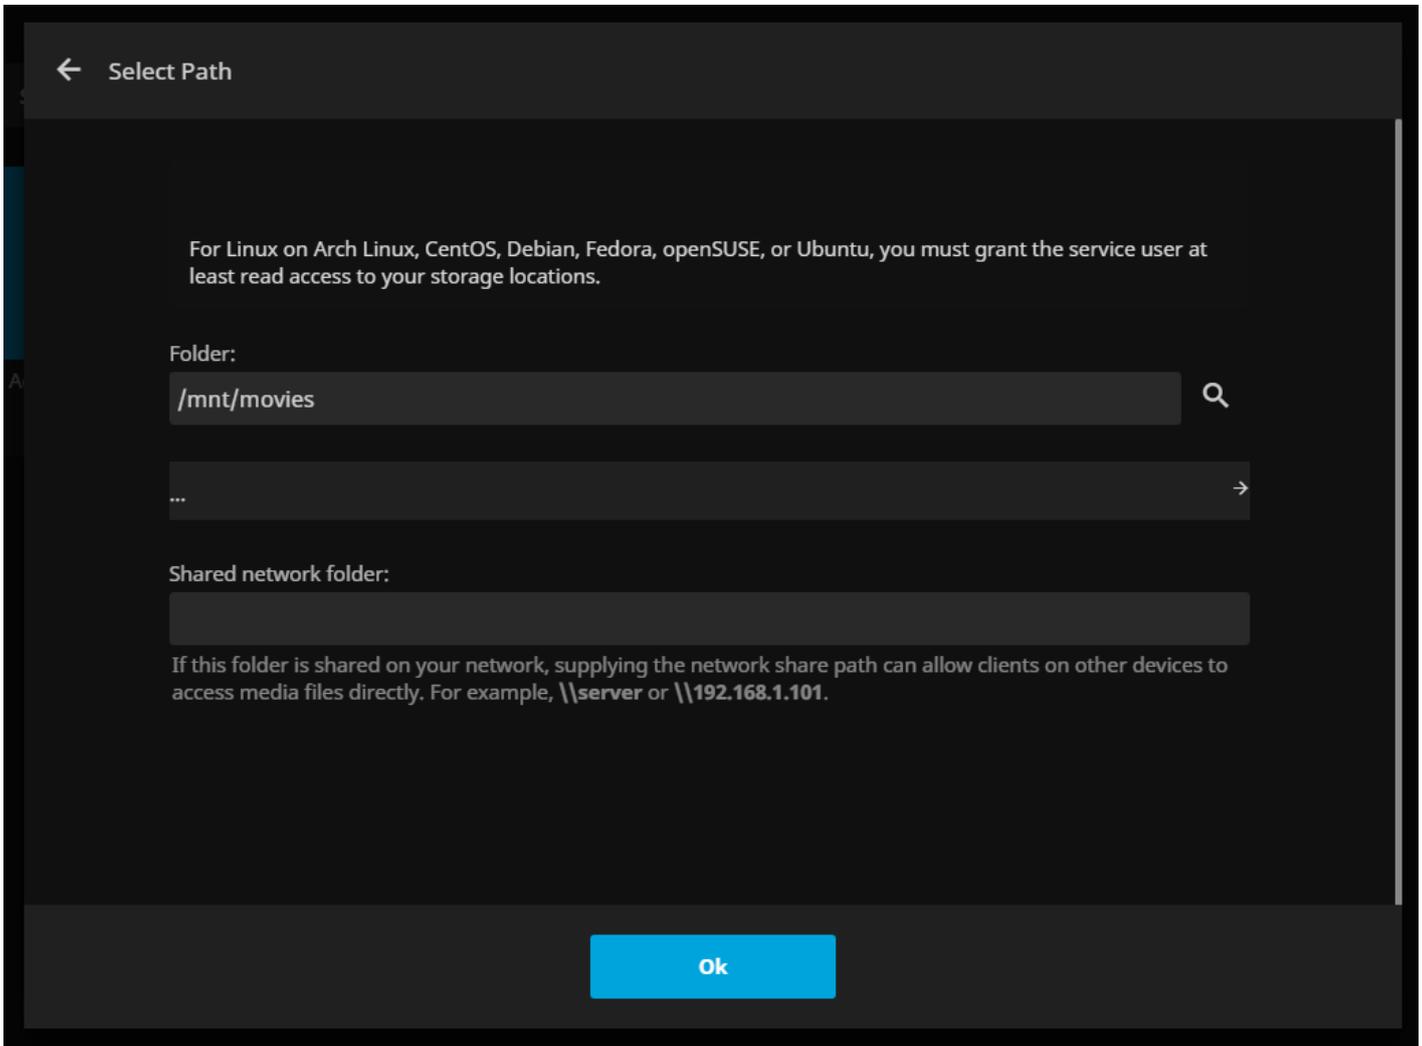

After creating a folder, let's create a library in Jellyfin:

Add a new library:

Assign the appropriate folder to this library:

New item:

To download a new item, navigate to the root of your project "/" and enter the following commands:

```
cd mnt/LIBRARY_NAME
```

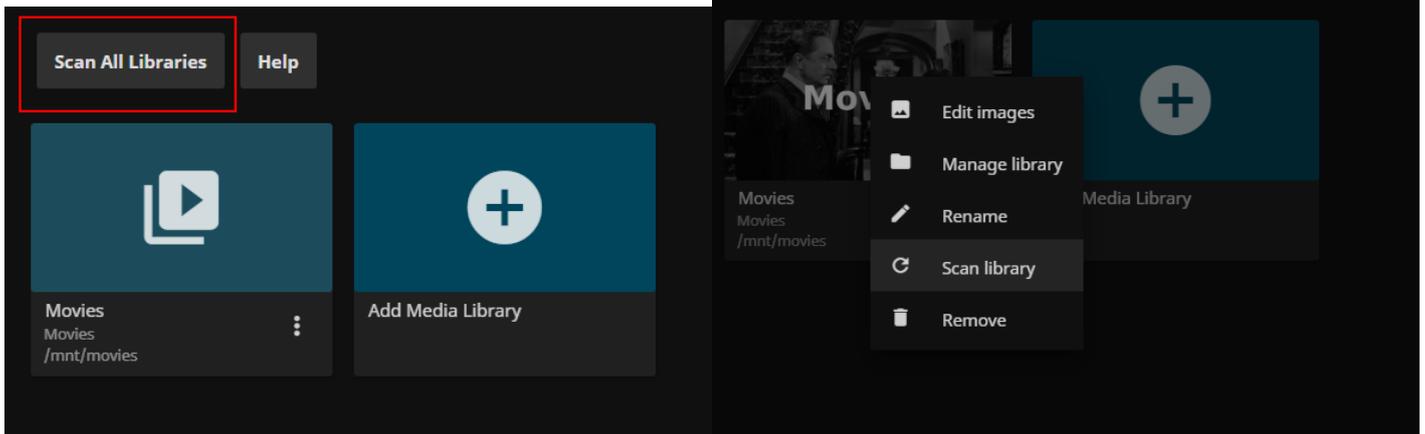

```
wget DOWNLOAD_ITEM_URL
```

LIBRARY_NAME - The name of the library.

DOWNLOAD_ITEM_URL - The download URL of the item you want to upload to the server.

After all

Scan all libraries by clicking on the "Scan All Libraries" button or by clicking on the three dots and selecting "Scan Library".
