

# Service page

## Jellyfin module **WHMCS**

[Order now](#) | [Download](#) | [Community](#)

On the WHMCS admin service page (**Clients** → **(client)** → **Products/Services**) the module adds an information tab and the standard module command buttons.

Device Name	App Name	Last Activity
Firefox	Jellyfin Web	2026-06-06T00:24:53.973208Z

## Module commands

- **Create** — generates credentials, creates the Jellyfin user and applies the policy.
- **Suspend / Unsuspend** — toggles the user's *IsDisabled* flag.
- **Change Package** — re-applies the product policy to the existing user.
- **Change Password** — resets and sets a new password.
- **Terminate** — deletes the Jellyfin user.

# Custom buttons

- **Drop All Devices** — removes all of the user's registered devices.
- **Unblock** — re-enables a disabled account (requires the service to be *Active*).

# Information tab

- **API Connection status** — confirms the module can reach Jellyfin.
- **User** — username and disabled state (with a too-many-failed-logins warning).
- **Libraries** — the libraries the user can access.
- **Info** — streaming bitrate limit, active sessions, failed-login counter and SyncPlay access.
- **Active Devices** — device name, app and last activity.

“ All lifecycle actions are license-gated: if the license cache is stale and the license server is unreachable, the action is refused with the license error.
