Client Area Home Screen

Mikrotik VPN module **WHMCS**

Order now | Download | Community

VPN Service Management Dashboard

After authenticating in the client area, the end customer sees the VPN service management page under the **Manage** tab.

Quick Actions

At the top of the dashboard, clients can find:

- **Connection setup instructions** — links to your predefined documentation (if configured).
- **Reset VPN Interface** — allows the client to manually reset their active VPN session.

Connection Information Card

Displays all the primary details needed to establish the connection:

- **Server Address** — IP address or hostname of the Mikrotik router.
- **Username** — VPN username (auto-generated or assigned).
- **Password** — masked password with an option to toggle visibility.
- **Bandwidth Limits** — the configured upload/download speeds for the account (e.g. `10 Mb/s`). *(Includes quick-copy icons next to sensitive values).*

Connection Status Card

Provides real-time information by querying the router API:

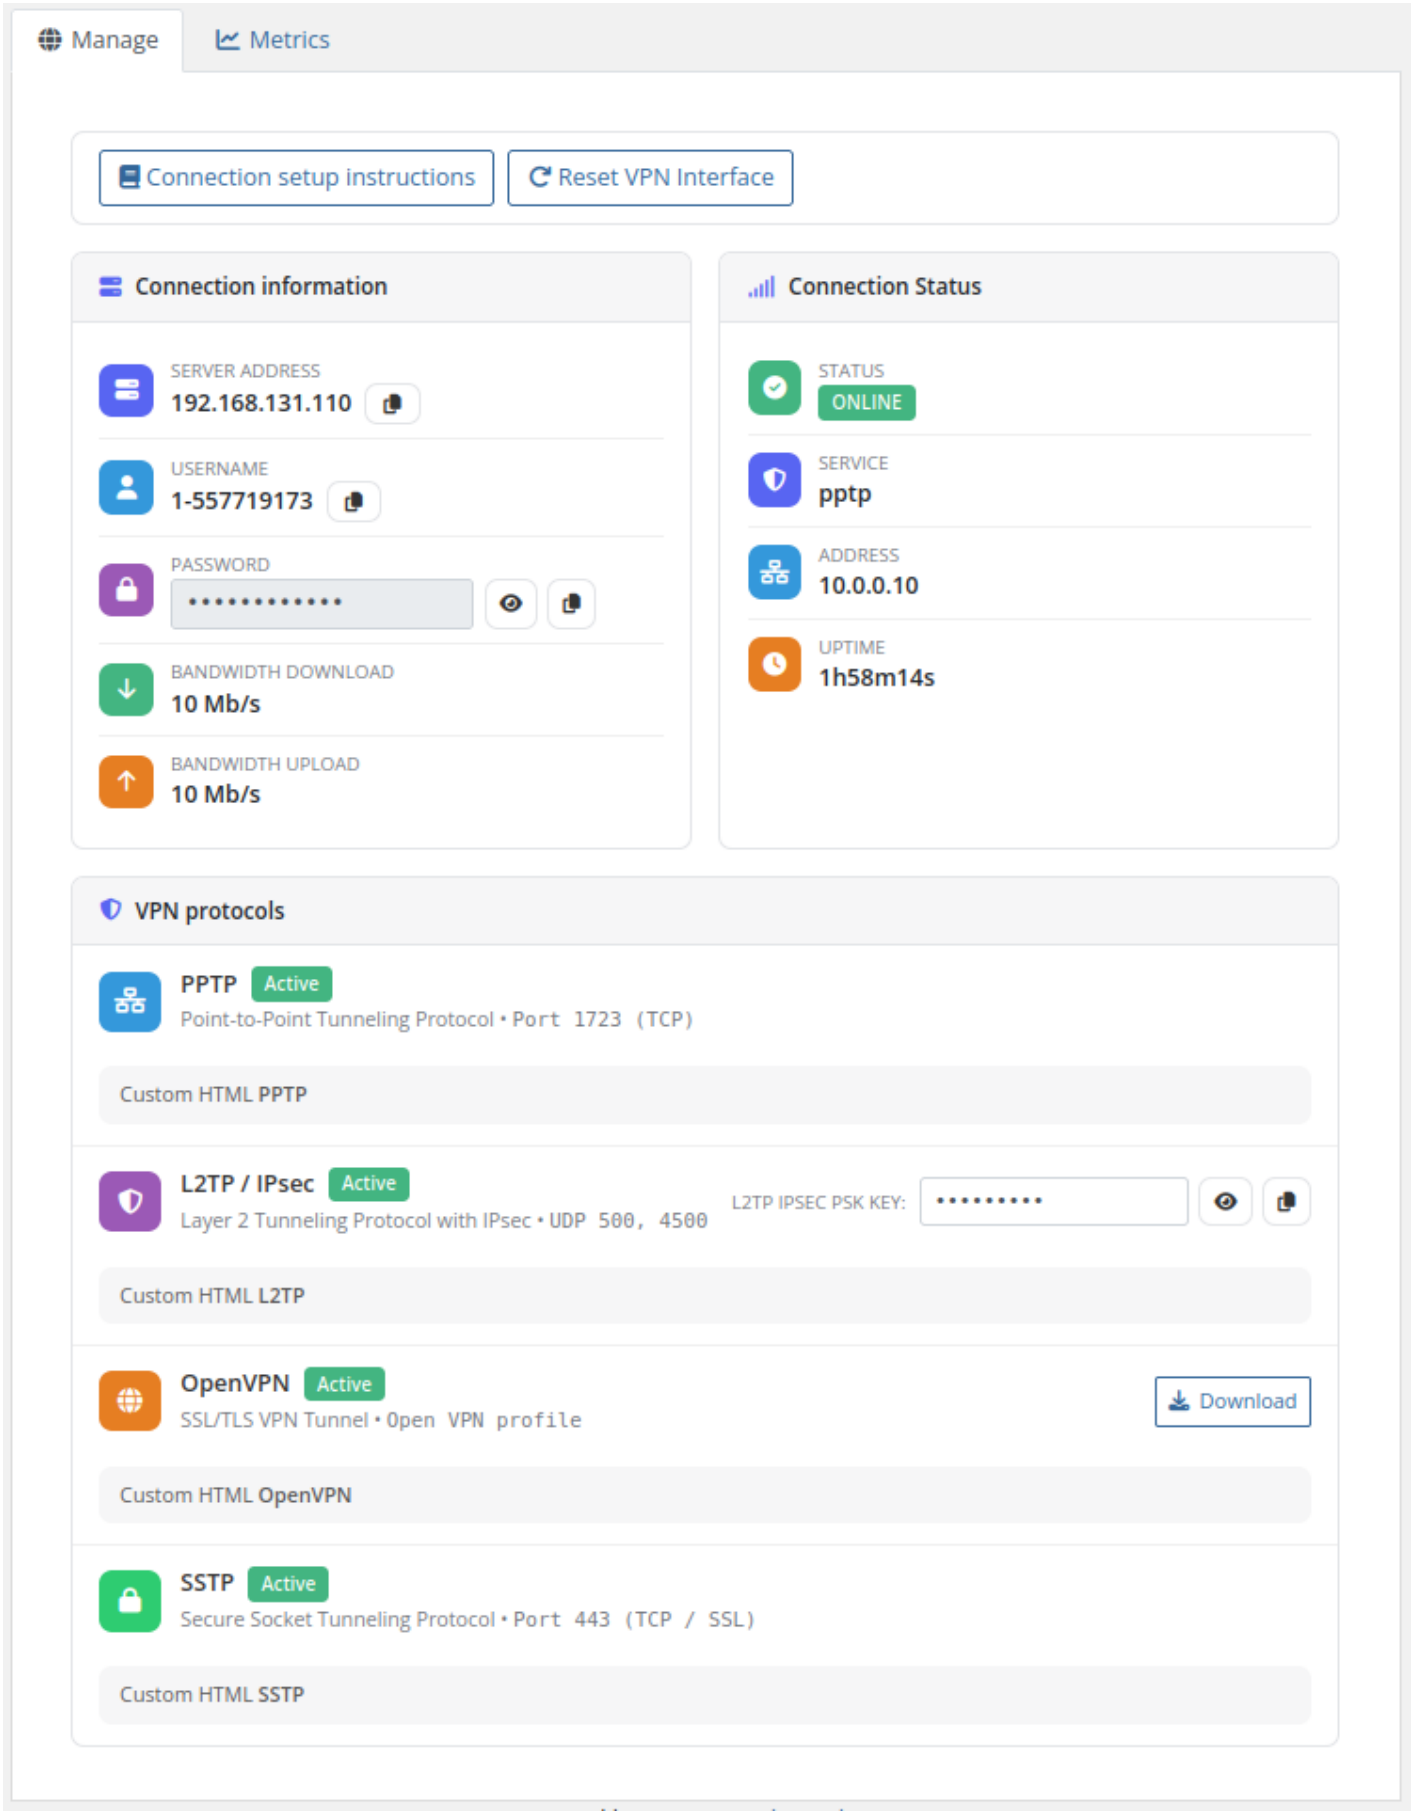

- **Status** — `ONLINE` or `OFFLINE` badge.
- **Active Service** — which protocol is currently in use (e.g. `pptp`).
- **Client IP Address** — the internal VPN IP address assigned.
- **Session Uptime** — duration of the current connection.

VPN Protocols Section

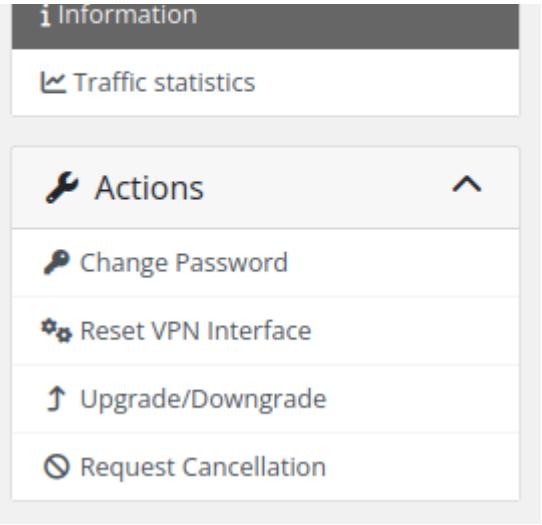

Displays the specific connection details for each VPN protocol enabled by the administrator (PPTP, L2TP, OpenVPN, SSTP). Each section contains:

- Connection port and security details.
- Custom HTML blocks with specific instructions if injected by the admin.
- Dedicated download buttons (e.g., OpenVPN profile configuration file).
- Specialized keys (e.g., `L2TP IPSEC PSK KEY`).
