

WHMCS setup (install/update)

System requirements

The module uses ionCube encoding. Your server must meet the following requirements:

Requirement	Minimum
PHP	8.2 or higher
WHMCS	9.x or higher
ionCube Loader	v13 or newer (v14, v15)

Older module versions for WHMCS 8

Older versions of the module are available for download, sorted by PHP version:

- PHP 7.4: https://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-MinIO-S3/php74/
- PHP 8.1: https://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-MinIO-S3/php81/

Step 1 — Download the latest version of the module

```
wget http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-MinIO-S3/php82/PUQ_WHMCS-MinIO-S3-latest.zip
```

All versions of the module are available via the link:

http://download.puqcloud.com/WHMCS/servers/PUQ_WHMCS-MinIO-S3/

Step 2 — Unzip the archive with the module

```
unzip PUQ_WHMCS-MinIO-S3-latest.zip
```

Step 3 — Copy and Replace

Copy the `puqMinIO3` directory from the extracted `PUQ_WHMCS-MinIO-S3` archive to your WHMCS installation:

```
WHMCS_WEB_DIR/modules/servers/
```

“ **Note:** To install and update a module, you must perform one and the same action — download and copy the latest version over the existing files.
