

Description

ownCloud module **WISECP**

[Order now](#) | [Download](#) | [FAQ](#)

Requirements

WISECP: v3.1.5+, php: v8.x, Ioncube: V12+
ownCloud 10.13 +

Preface

Thanks to the module, the company is able to offer public cloud services to its customers based on ownCloud accounts.

The module is used to create customer accounts on the previously prepared ownCloud server. The module enables You to define multiple public cloud packages and sell them at different prices. The module creates a customer account according to the selected package. The client can have many independent accounts in the cloud.

For the correct operation of the module, a pre-prepared ownCloud installation is required (the module does not assist in the installation of the ownCloud server and assumes that such installation is ready for operation through API.) Module use ownCloud API to manage clients account.

We have prepared a detailed installation manual for the module, including all the steps needed to implement the module, including the preparation of the ownCloud server, including all installation steps such as NGNIX, PHP, ownCloud, SSL certificates etc.

Functions:

- Auto create and deploy client account
- The module uses only the API to manage the accounts
- Module supports multilingualism (**Arabic, Bosnian, Czech, German, Greek, English, Spanish, Persian, French, Hungarian, Indonesian, Italian, Georgian, Latvian, Dutch, Polish, Portuguese, Romanian, Ukrainian**)
- The module shows the current data usage by the user
- Link to instructions for setting up the service in the client area.

Available options in the admin panel:

- Create users
- Suspend users
- Terminate users
- Unsuspend users
- Change users password
- Change Package
- API connection status
- ownCloud Disk status

Available options in the client panel:

- Change the ownCloud user password
- ownCloud Disk status
