Custom Code

PUQ Page Manager module **WHMCS**

Order now | Download | Community

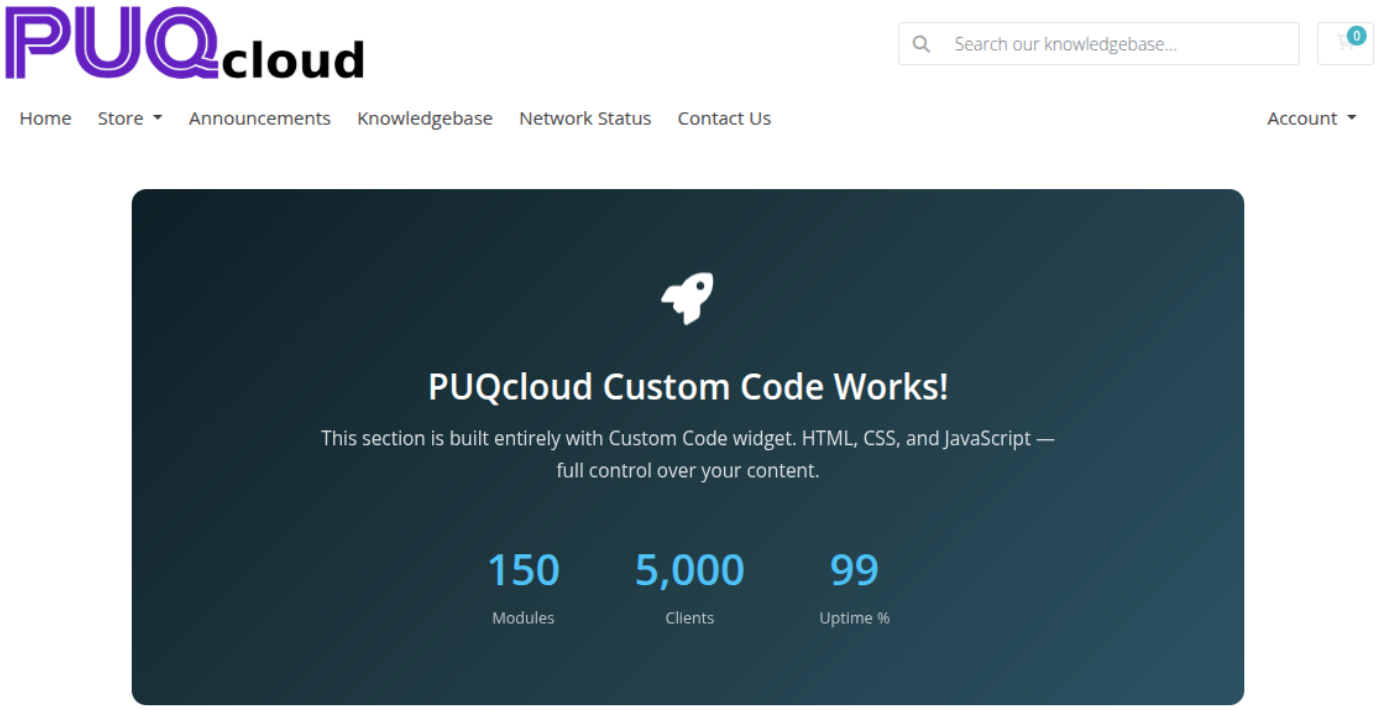

The Custom Code widget allows you to insert raw HTML, CSS, and JavaScript directly into any page. All three code fields are presented as dark-themed monospace editors. HTML and CSS are injected into the page output; JavaScript is executed after the page loads.

Admin Settings

Settings

Code Settings

Setting	Type	Description
html	textarea (dark editor)	Raw HTML markup to inject into the page
css	textarea (dark editor)	CSS rules applied to the page when this block is rendered
js	textarea (dark editor)	JavaScript executed after page load

Code is stored base64-encoded internally to preserve special characters and formatting.

Layout Settings

Setting	Type	Default	Description
width	text	—	CSS width of the widget container (e.g. `800px`, `100%`)
margin_top	text	—	CSS top margin (e.g. `20px`)
margin_bottom	text	—	CSS bottom margin (e.g. `20px`)
style	select	`puq`	Visual style template
background_image	text	—	URL of the background image
background_color	color	`#FFFFFF`	Background color of the widget container
disable_background_shadow	checkbox	off	Remove the drop shadow from the container
disable_background_radius_top	checkbox	off	Remove the top border radius from the container
disable_background_radius_bottom	checkbox	off	Remove the bottom border radius from the container
disable_background	checkbox	off	Disable the background container entirely
full_width	checkbox	off	Stretch the widget to the full page width

Style Templates

Template	Description
`puq`	Default custom code container style
