

Installation and Update

Page Manager addon **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#)

System Requirements

Requirement	Minimum
PHP	8.1, 8.2 or newer
WHMCS	8.x, 9.x or newer
ionCube Loader	v13 or newer (v14, v15)

“ **Note:** The module uses ionCube encoding. Make sure ionCube Loader is installed and active on your server.

Download

The module can be ordered and downloaded from PUQ Cloud:

- **Order / Download:** <https://puqcloud.com/store/whmcs-addon-modules>
- **FAQ:** <https://community.puqcloud.com/>
- **Direct download links:**

PHP 8.1:

```
wget https://download.puqcloud.com/WHMCS/addons/PUQ_WHMCS-Page-Manager/php81/PUQ_WHMCS-Page-Manager-latest.zip
```

PHP 8.2+:

```
wget https://download.puqcloud.com/WHMCS/addons/PUQ_WHMCS-Page-Manager/php82/PUQ_WHMCS-Page-Manager-latest.zip
```

“ All versions are available at:

https://download.puqcloud.com/WHMCS/addons/PUQ_WHMCS-Page-Manager/

After downloading, extract the archive:

```
unzip PUQ_WHMCS-Page-Manager-latest.zip
```

Installation

Step 1: Upload Files

Extract the module archive and upload the `puq_page_manager` directory to the WHMCS addons directory:

```
/your-whmcs/modules/addons/puq_page_manager/
```

Directory structure after upload:

```
modules/addons/puq_page_manager /
  puq_page_manager.php
  hooks.php
  whmcs.json
  version
  logo.png
  lib/
    puqPageManager.php
    puqEditorJSParser.php
    puqWidgetHelpers.php
  lang/
    english.php
```

```
templates/  
  header.tpl  
  home.tpl  
  pages.tpl  
  page_edit.tpl  
  analytics.tpl  
  settings.tpl  
  settings_appearance.tpl  
  revisions.tpl  
  license_required.tpl  
  client/  
    js_css.tpl  
    output_type_editor_js.tpl  
    password_prompt.tpl  
templates/js/  
  editor.js  
widgets/  
  puqannouncement/  
  puqcontactform/  
  puqcta/  
  ... (23 widget directories)  
  _shared/
```

Step 2: Activate the Module

1. Log in to the WHMCS admin panel
2. Go to **Setup > Addon Modules**
3. Find **PUQ Page Manager** in the list
4. Click **Activate**

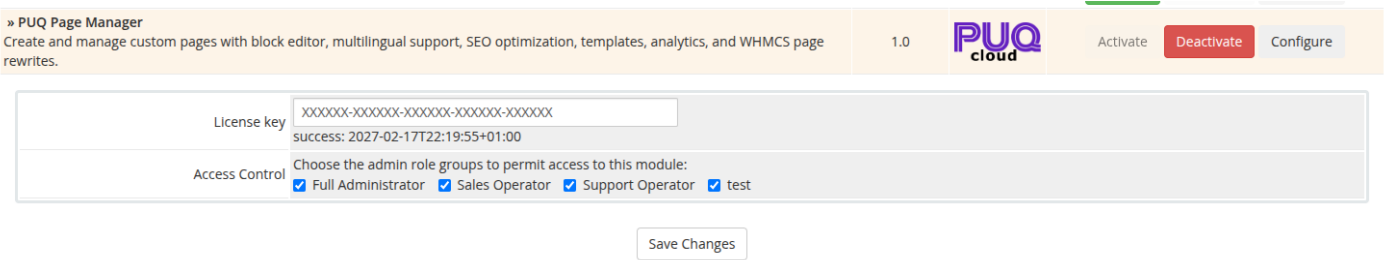

“ On activation, the module creates the necessary database tables for pages, translations, revisions, analytics, settings, and rewrites.

Step 3: Configure the License Key

1. After activation, click **Configure** next to the module
2. Enter your license key in the **License key** field
3. Select admin role groups that should have access to the module

4. Click **Save Changes**

After saving, a verification status will appear below the license key field (e.g., `success: 2027-02-18T01:32:13+01:00`).

» PUQ Page Manager
Create and manage custom pages with block editor, multilingual support, SEO optimization, templates, analytics, and WHMCS page rewrites.

1.0 **PUQ** cloud Activate Deactivate Configure

License key
success: 2027-02-17T22:19:55+01:00

Access Control
Choose the admin role groups to permit access to this module:
 Full Administrator Sales Operator Support Operator test

01-addon-config-license.png

Step 4: Access the Module

Go to **Addons > PUQ Page Manager** to access the dashboard.

Update

Step 1: Backup

Before updating, we recommend backing up:

- Your WHMCS database
- Module files in `modules/addons/puq_page_manager/`

Step 2: Upload New Files

Extract the new version and overwrite all files in:

```
/your-whmcs/modules/addons/puq_page_manager/
```

Step 3: Re-activate (if needed)

If the update adds new database columns, deactivate and re-activate the module:

1. Go to **Setup > Addon Modules**

2. Click **Deactivate**, then **Activate** again

“ This is safe — the module only creates tables/columns if they don't already exist. Your pages, revisions, analytics, and settings are preserved.

Step 4: Verify

1. Go to **Addons > PUQ Page Manager**
2. Check the version number in the top-right corner of the navigation bar (e.g., `v1.0`)

Deactivation

1. Go to **Setup > Addon Modules**
2. Click **Deactivate** next to PUQ Page Manager
3. Confirm the deactivation

“ **Warning:** Deactivation drops the module's database tables. All your pages, translations, revisions, analytics data, and settings will be lost. Export your pages before deactivating if you want to preserve them.

License

The module requires an active license for full functionality. The license is verified through the PUQ Cloud license server.

How License Verification Works

- The module periodically checks license validity at `https://license.puqcloud.com/`
- Verification results are cached in the database for 5 days
- If the license server is temporarily unreachable, the module uses the last cached result

Without an Active License

- **Dashboard** (Home page) remains fully accessible
- **All other pages** (Pages, Analytics, Settings) display a license required page
- **All AJAX controllers** (except Dashboard) return a 403 error

After Activating a License

1. The warning banner disappears
2. All pages and features become accessible
3. Enter your license key in **Setup > Addon Modules > PUQ Page Manager > Configure**

Purchase a License
