

# Page Background

## Page Manager addon **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#)

The Page Background widget sets the background for the entire page. Unlike content widgets, it does not render a visible block in the page flow — instead it applies a full-page background using an image, a solid color, or a looping video. Only one Page Background widget should be placed per page.

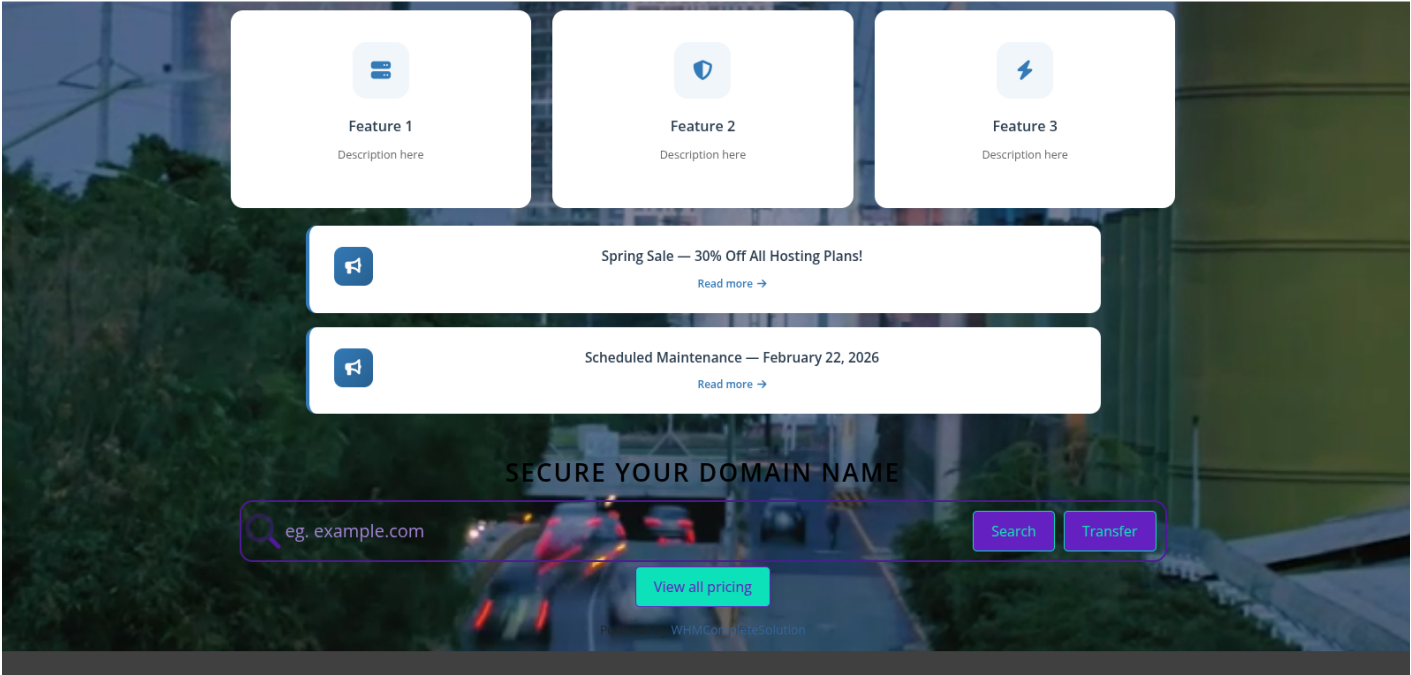

## Admin View

The screenshot shows the admin interface for the Page Background widget. It features a title 'Page Background' in blue, a green hex color code '#x3W5TFz3UE', and a 'Style' dropdown menu set to 'puq'. A 'Darken background' field is set to '0 %'. Below this is a 'Background image/color' section with a text input field and a color picker. The 'Background video' section includes three input fields for 'mp4', 'ogg', and 'webm' formats. The 'mp4' field contains the URL 'https://assets.mixkit.co/videos/34563/34563-720.mp4'.
