v1.1 — 2026-07-15

Release of version 1.1 with standards compliance improvements, and client/product navigation integrations.

New Features

- Integrated quick navigation links for all products to the WHMCS product edit page (`configproducts.php?action=edit&id=X`) in all product tables.
- Integrated quick navigation links for clients to their WHMCS summaries (`clientssummary.php?userid=Y`) in client tables.
- Added automatic Preflight System Requirements checks (PHP version, JSON/Guzzle extensions check) before activation.

Bug Fixes and Compliance

- Aligned module architecture with PUQ WHMCS Standards v3+.
- Replaced direct PHP cURL with WHMCS-native `GuzzleHttp\Client`.
- Fixed false positive Cyrillic warnings and localized remaining untranslated elements in header and 404 templates.
- Replaced ASCII apostrophes with safe typographic apostrophes in French, Catalan, and Italian translation files.
- Eliminated redundant `logModuleCall` logging during offline license checks to prevent database bloat.

v1.0 — 2026-02-15

First release.

New Features

- Dashboard with key metrics overview (products, groups, clients, services, retention rate)
- Services by Status donut chart on dashboard
- Recurring Revenue cards with multi-currency support
