## On the page for managing snapshots

Snapshots are a quick way to save the state of the system, which allow you to restore the state of the system as quickly as possible.

Snapshots are not a method of system backups and are most often used during system administration work, hence their retention period is limited.

The client gets the opportunity to create and remove snapshots of a virtual machine.

It is also possible to restore the state of a virtual machine from the snapshot.

It also shows information about the number and limit of snapshots.

Depending on the configuration of the service package. The current lifetime of the snapshot will be indicated, after this time the snapshot will be automatically deleted.

# Snapshots: 4/10

Snapshot description

 Take Snapshot

	<div>Update 4 (06-09-2022 11:29:34)</div> <div>Will be automatically removed after: 0 days 23:59:05</div>	<div>Rollback</div>	<div>Remove</div>
	<div>LA la LA (05-09-2022 15:28:56)</div> <div>Will be automatically removed after: 0 days 03:58:27</div>	<div>Rollback</div>	<div>Remove</div>
	<div>Update 2 (05-09-2022 15:28:38)</div> <div>Will be automatically removed after: 0 days 03:58:09</div>	<div>Rollback</div>	<div>Remove</div>
	<div>Update 1 (05-09-2022 15:28:26)</div> <div>Will be automatically removed after: 0 days 03:57:57</div>	<div>Rollback</div>	<div>Remove</div>
