Blocking Ticket For Guests

Description of the "Blocking Ticket For Guests" extension:

The "Blocking Ticket For Guests" extension is a robust, effective tool for managing ticket submissions within the WHMCS environment. Its primary function is to prevent non-registered users, or guests, from submitting support tickets, thereby streamlining the ticketing process and focusing resources on assisting registered users.

Key features of the extension include:

1. **User Authentication:** The extension implements a user authentication check before a ticket is submitted. If the user is not logged in, they will be unable to submit a ticket.
2. **Redirection of Unregistered Users:** In the event an unregistered user attempts to submit a ticket, they will be redirected to a login page. This ensures that only authenticated clients can interact with the support team through the ticketing system.
3. **Custom Redirection:** The extension provides the flexibility to specify the redirection page. This can either be a specific page set in the configuration or a custom page with a defined HTML message.
4. **Maintained Functionality for Registered Users:** For authenticated clients, the functionality remains unchanged. They are able to submit tickets to the support team without restrictions.
5. **Menu Link Removal:** The extension also removes "Open Ticket" links from the primary and secondary menus for unregistered users, minimizing the likelihood of ticket submission attempts by guests.

One notable aspect of the extension is the ability to customize redirections and messages, allowing it to be tailored to specific site requirements and providing users with a more intuitive and user-friendly feedback system.

The "Blocking Ticket For Guests" extension is an invaluable tool for you seeking to optimize their WHMCS support ticket system, enhancing client navigation and simplifying support operations. With a focus on user authentication, it ensures that support resources are dedicated to assisting registered clients, thereby improving overall service efficiency and user satisfaction.

Configuration

Save Changes

The "Blocking Ticket for Guests" extension configuration page, a part of the PUQ Customization WHMCS Addon, offers a robust set of options to enhance your WHMCS user experience:

- 1. **Enabled:** This control allows administrators to toggle the entire functionality of this extension, playing a critical role in WHMCS customization and user accessibility.
- 2. **Disable menu item:** This setting provides control over the availability of the ticket opening link in the menu, a feature that significantly impacts user navigation within WHMCS.
- 3. **URL:** This field allows redirection configuration for guests attempting to open a new ticket, an essential security measure in the WHMCS ticketing system.
- 4. **Page Title:** A customizable element for the login page title, this option also supports multilingual settings, contributing to international user friendliness of your WHMCS system.
- 5. **Action:** This selection lets administrators determine the action after a guest clicks the ticket opening link, a pivotal choice in the WHMCS user journey.
- 6. **HTML text:** This field allows the input of HTML text, providing an opportunity for personalized messages on your WHMCS system in different languages.

At the end of the configuration process, the changes can be saved with a dedicated "Save Changes" button.

Optimize your WHMCS system with the "Blocking Ticket for Guests" extension, part of the PUQ Customization WHMCS Addon, to enhance user navigation, security, and overall experience.

Remember, the actual labels on the buttons and fields may vary depending on the current interface language.
