Clients Only Access

The **"Clients Only Access"** extension is designed to restrict access to all website content, allowing only the login window to be accessible to visitors. Once a client logs in, they gain full access to the website in its standard mode. However, if they log out, they will be redirected back to the login window and won't be able to browse the site. If they attempt to manually access any page by entering a URL, they will be redirected to the login page.

This extension provides the following options for disabling certain elements:

Disabled main menu: The main menu will not be available to non-logged-in users.

Disabled account menu: The account menu will not be available to non-logged-in users.

Allow password reset: Non-logged-in users will be allowed to reset their passwords.

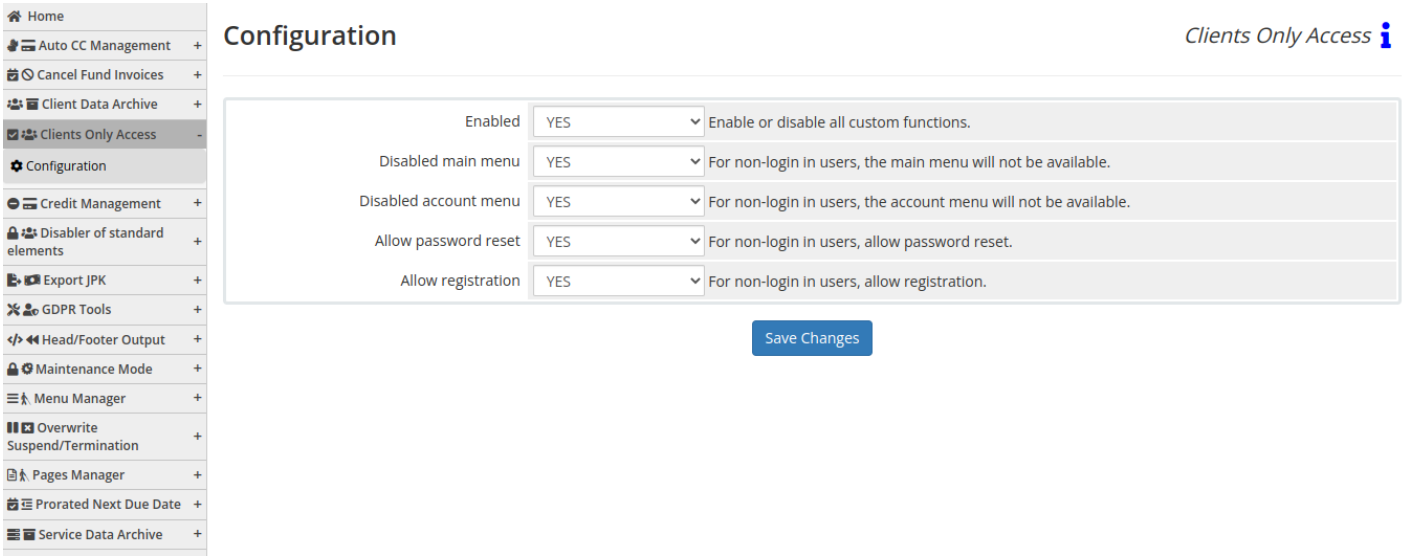

Allow registration: Non-logged-in users will have the option to register for an account.

By customizing these options, you can create a restricted access environment where only registered clients can fully interact with the website while non-logged-in users are limited to the login window. This helps ensure that sensitive information and functionality are accessible only to authorized clients.

Enabled - Enabling or disabling all custom functions of this extension affects the automation and visibility of its features in the client area. When extension disabled, the automation capabilities and related features provided by the extension will not be active or visible to clients. However, as an administrator, you will still have access to configure and utilize the extension's functionalities through the administration interface. This gives you the flexibility to control the visibility and automation aspects of the extension based on your specific needs and preferences.

On the configuration page, you have the option to enable or disable the following features:

1. Disabled main menu: When set to "YES," the main menu will not be available to non-logged-in users.
2. Disabled account menu: When set to "YES," the account menu will not be available to non-logged-in users.
3. Allow password reset: When set to "YES," non-logged-in users will have the option to reset their passwords.
4. Allow registration: When set to "YES," non-logged-in users will have the option to register for an account.

By configuring these options, you can customize the access and functionality available to non-logged-in users. Enabling or disabling these features allows you to control the user experience and

tailor it to your specific requirements.

Client Area
