The "**Ticket Auto-Reply**" extension streamlines communication with clients by automating responses to their inquiries. Users can configure default replies for all support departments or customize responses for each department individually. Additionally, administrators can set the username for replies and specify the time frame for auto-responses after ticket creation.

This extension offers flexibility by allowing different replies for registered clients based on whether they have selected a specific product or not, as well as for unregistered clients. Users can include merge field variables in auto-replies, which are dynamically replaced with user data upon sending.

Key Features:

- **Automated Responses:** Automatically send predefined messages to clients in response to their inquiries, reducing response times and improving customer satisfaction.
- **Department-specific Replies:** Customize auto-replies for each support department to ensure tailored responses that meet the needs of different client inquiries.
- **Flexible Configuration:** Set the admin username for replies and adjust the timing of auto-responses to align with your support workflow.
- **Client Segmentation:** Tailor responses based on client registration status and product selection, enhancing personalization and relevance.
- **Merge Field Support:** Include merge field variables in auto-replies to dynamically insert client-specific information for a personalized touch.

Overall, the "**Ticket Auto-Reply**" extension enhances efficiency and customer service by automating response processes and providing flexibility in configuring replies based on client characteristics and support department requirements.

Configuration

Ticket Auto-Reply 

Enabled	<input type="text" value="YES"/>
Default admin Username For Reply	<input type="text" value="puq - puq (it@puq.pl) - Support Operator"/>
Default Reply	<input type="text" value="This is default Reply:"/>
Default number of minutes	<input type="text" value="35"/> from ticket creating to the reply

[Save Changes](#)

Enabled - Enabling or disabling all custom functions of this extension affects the automation and visibility of its features in the client area. When the extension is disabled, the automation capabilities and related features provided by the extension will not be active or visible to clients. However, as an administrator, you will still have access to configure and utilize the extension's functionalities through the administration interface. This gives you the flexibility to control the visibility and automation aspects of the extension based on your specific needs and preferences.

Default admin Username For Reply - Set the admin username for default replies

Default Reply - Please enter your message here. If you check "Auto-Reply" checkbox in the "Replies" tab but do not check "Overwrite Reply" checkbox, the response to the client will contain the text from this field.

Default number of minutes - The time after the client's request is created when an auto-reply will be sent. Please note that this time depends entirely on your WHMCS cron job. For example: If a client submits a request at 11:41 and you set this field to "6", and the cron job runs every 5 minutes, then the auto-reply will be sent at 11:50, i.e., in the next cron run.

Merge Fields

In auto-reply you can enter merge field variables, which the system replaces with the user's data when it sends the reply.
The exact list of fields you have available in auto-reply message, appears directly below the message box with the field description and merge field code.
Please, be attentive when selecting variables for each response, as specific variables are available for certain types of customers.

Types of customers and lists of available variables:

1 Client type - Registered customer who has chosen the service they are referring to when submitting the inquiry.
Variables available from the lists: "Product/Service Related", "Client Related" and "Other"

2 Client type - Registered customer who has not chosen the service they are referring to when submitting the inquiry.
Variables available from the lists: "Client Related" and "Other"

3 Client type - Unregistered customer.
Variables available from the lists: "Other"
