PUQ Customization module **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#)

The screenshot shows the 'Actions' menu for 'Auto CC Management'. The menu is located on the left side of the page, and the main content area displays the following information:

Client Status	Count	Action
Clients with enabled Auto CC	7	Enable Auto CC for ALL clients
Clients with disabled Auto CC	1	Disable Auto CC for ALL clients

In the "**Actions**" menu, you have the option to enable or disable Auto CC for all clients with just one click. This convenient feature allows you to quickly toggle the Auto CC functionality globally, affecting all clients on the system.

Additionally, the menu provides a clear overview of the number of clients with Auto CC enabled and disabled. This information gives you a quick snapshot of how many clients have opted to use the Auto CC feature for automated credit card payments and how many have chosen to have it disabled.
