Installation/Update and configuration guide

PUQ Customization module **WHMCS**

Order now | Download | FAQ

Module is coded ionCube v13

Supported php version:

- php 7.4 WHMCS 8.11.0 -
- php 8.1 WHMCS 8.11.0 +
- php 8.2 WHMCS 8.11.0 +

To install and update a module, you must perform one and the same action.

1. Download the latest version of the module.

PHP 8.2

```
wget http://download.puqcloud.com/WHMCS/addons/PUQ-Customization/php82/PUQ-Customization-latest.zip
```

PHP 8.1

```
wget http://download.puqcloud.com/WHMCS/addons/PUQ-Customization/php81/PUQ-Customization-latest.zip
```

PHP 7.4

```
wget http://download.puqcloud.com/WHMCS/addons/PUQ-Customization/php74/PUQ-Customization-latest.zip
```

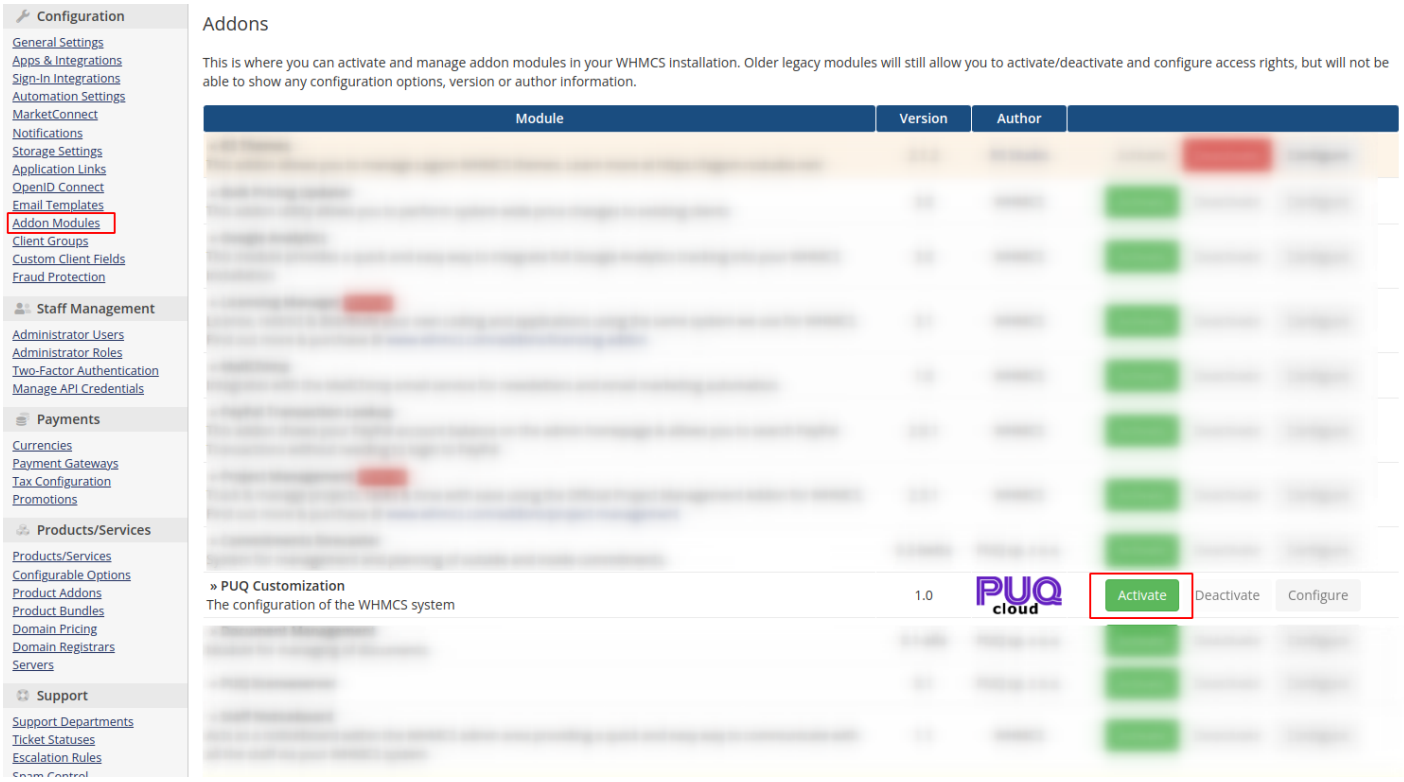

> All versions are available via link: http://download.puqcloud.com/WHMCS/addons/PUQ-Customization/

2. Unzip the archive with the module.

```
unzip PUQ-Customization-latest.zip
```

3. Copy and Replace "puq_customization" to "WHMCS_WEB_DIR/modules/addons/"

4. Login to the admin zone of your WHMCS and go to "Configuration->Addons Modules"

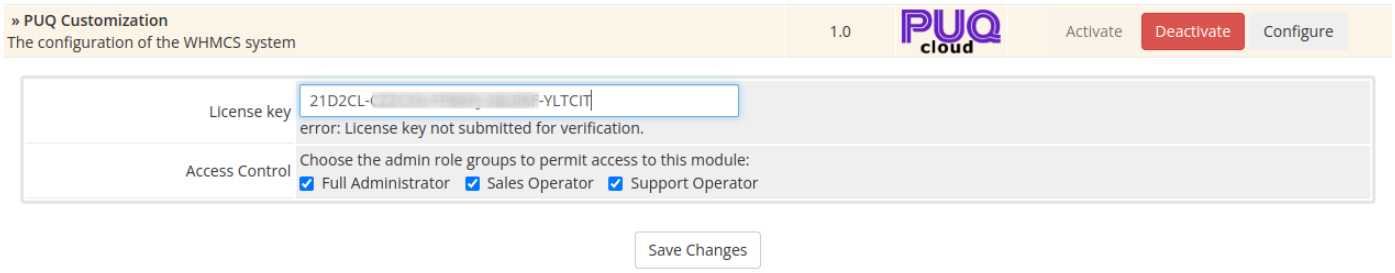

5. From the list of modules, select the "**PUQ Customization**" module and click the "**Activate**" button. After these actions, the module will be activated and will create the necessary tables in the database for

work.

> Note that deactivating a module will delete all tables created by the module.

6. After activation, don't forget to configure module access rights and enter a license key if you want to use all extensions without restrictions.
