

# Check and manage Client Sessions

## PUQcloud Panel

[Order Now](#) | [Download](#) | [FAQ](#)

### Overview

The **Client Sessions** section in **PUQcloud Panel** provides full visibility into all user and client activities occurring in the system.

Each client's interaction — whether via the **web panel** or **API requests** — is automatically logged in real time.

All session tracking runs **in the background**, so even with thousands of simultaneous connections, the system performance remains unaffected.

This feature is essential for **security auditing**, **support troubleshooting**, and **usage monitoring**.

### Navigation Path

**Dashboard** → **Monitoring** → **Client Sessions**

### Key Features

Feature	Description
<b>Complete Client Logs</b>	Monitors every user's actions through the Client Area and API.
<b>Background Execution</b>	Sessions are recorded asynchronously, ensuring no system slowdown.
<b>Real-Time Tracking</b>	Displays ongoing requests with instant refresh intervals.
<b>Filter by Date Range</b>	Analyze session activity for a specific period.
<b>Auto Refresh Option</b>	Set automatic updates every few seconds.

Feature	Description
Detailed Metadata	Includes timestamp, IP, client name, user name, and accessed URL.

## Using the Client Sessions Page

### 1. Access the Page

Navigate to

**Dashboard → Monitoring → Client Sessions**

You'll see a list of recorded client activities including:

- **Date and Time**
- **Client and User**
- **IP Address**
- **Request Source (WEB/API)**
- **HTTP Method (GET/POST)**
- **Full URL Accessed**

The screenshot displays the 'Client Sessions' page in the PUQcloud interface. The page title is 'Client Sessions' and the breadcrumb is 'Dashboard / Client Sessions'. A filter field is set to '27-10-2025 12:00 - 29-10-2025 12:00'. The table shows 10 entries with the following data:

Date	Client	User	URL
2025-10-27 21:13:37 92.246.84.133	Demo Client Client	Demo Client demo-client@puqcloud.com	API GET https://demo.puqcloud.com/api/logout

2025-10-27 21:09:47	Demo Client	Demo Client	WEB GET

### 2. Filter by Date and Time

To narrow results, use the **Filter** field at the top.

Click the date range selector, choose your **start** and **end** times, then click **Apply** to confirm.

WEB GET

## Columns Explained

Column	Description
<b>Date</b>	When the request was made.
<b>Client</b>	Name of the organization or customer account.
<b>User</b>	Name and email of the user under that client.
<b>IP Address</b>	Source IP used during the session.
<b>URL</b>	Exact web or API endpoint accessed.
<b>Type (WEB/API)</b>	Indicates the request source.
<b>Method (GET/POST)</b>	HTTP action type (data retrieval or update).

## Status Labels

Label	Meaning
<b>API</b>	Request executed through system API.
<b>WEB</b>	Request sent via client web interface.
<b>GET</b>	Data retrieved from the system.
<b>POST</b>	Data submitted or changed.

# Queue Controls

Control	Description
<b>Auto Refresh Interval</b>	Located in the top-right corner. Select update frequency (e.g., every 5 seconds).
<b>Off/On Switch</b>	Turns automatic refreshing on or off.
<b>Search Box</b>	Quickly find sessions by client name, user, IP, or URL.

## Example Use Case

Support staff can use this section to trace a client's recent activity.

For instance, you can identify when a client accessed their service list or triggered an API call.

Example entry:

```
2025-10-27 21:13:37 | Demo Client | demo-client@puqcloud.com  
API GET → https://demo.puqcloud.com/api/logout  
IP: 92.246.84.133
```

## Tips

- Use **short refresh intervals (3-5 seconds)** to watch active client activity in real time.
- Combine **date filters** with **keyword searches** to quickly find suspicious or failed API calls.
- Logs include both **web panel navigation** and **API usage**, providing full operational transparency.
- Background tracking ensures **stable system performance** even with heavy usage.
