Create and Manage an Attribute Group

PUQcloud Panel

Order Now | Download | FAQ

Product Attribute Groups are collections of attributes (e.g., IPv4, IPv6, 10 Gbps) you can later attach to products. They help standardize feature flags and technical capabilities across multiple products.

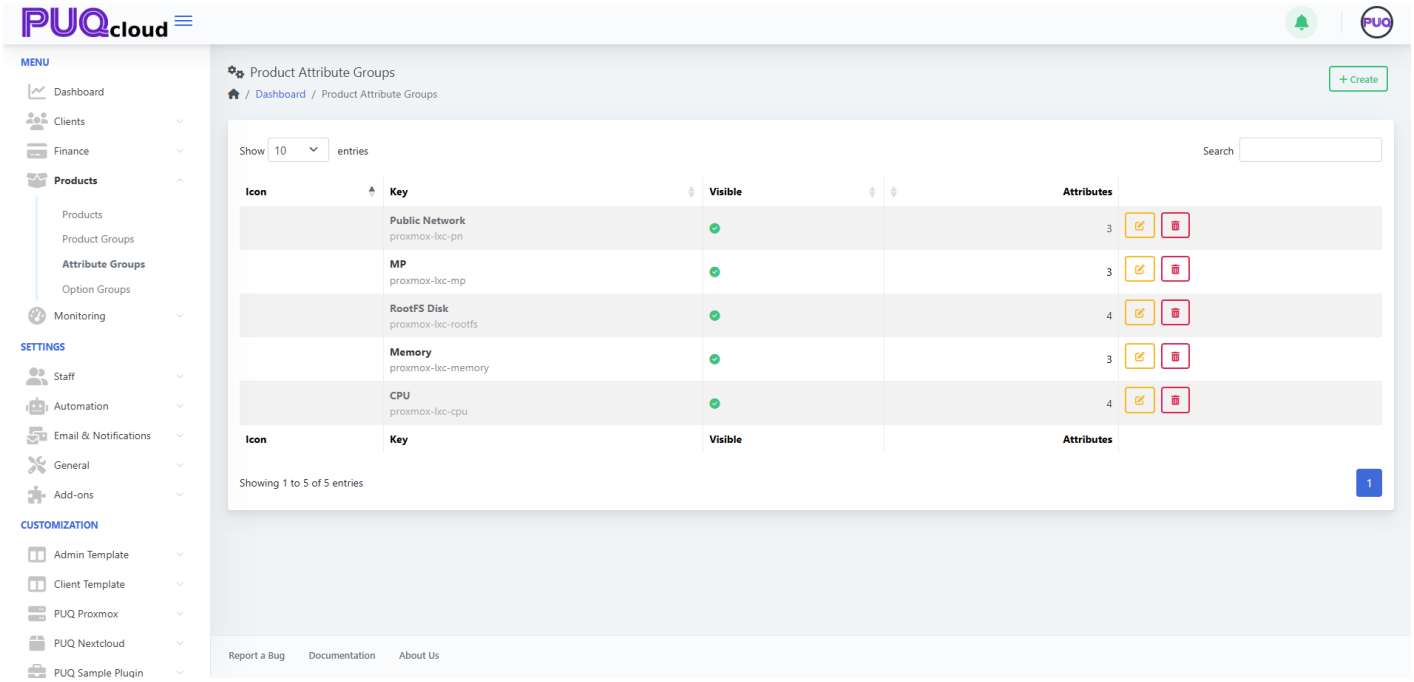

Overview

- **Path: Menu → Products → Attribute Groups**
- **You can:** Create groups, localize names/descriptions, upload images, add/edit/delete attributes in a group, and control group visibility.
- **Who:** Admins with product management permissions.

> A **Product Attribute** is a single capability/flag (e.g., `IPv6`). An **Attribute Group** is a labeled collection of such attributes.

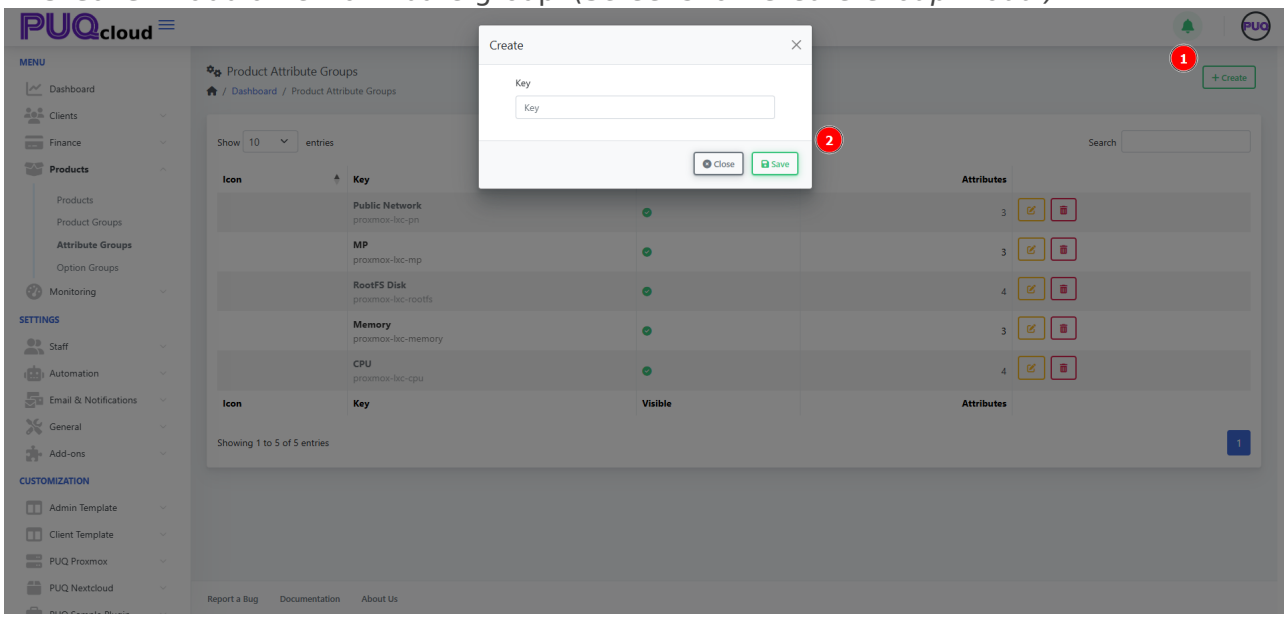

Attribute Groups List

The list shows **Icon**, **Key**, **Visible**, and **Attributes** (count) with actions **Edit** and **Delete**. Use **Search** to filter.
(Screenshot reference: Attribute Groups list)

Actions

- **+ Create** — add a new attribute group. *(Screenshot: Create Group modal)*

- **Edit** — open tabs **General / Images / Attributes**.
- **Delete** — remove the group (does **not** remove attributes already linked to products).

Create an Attribute Group

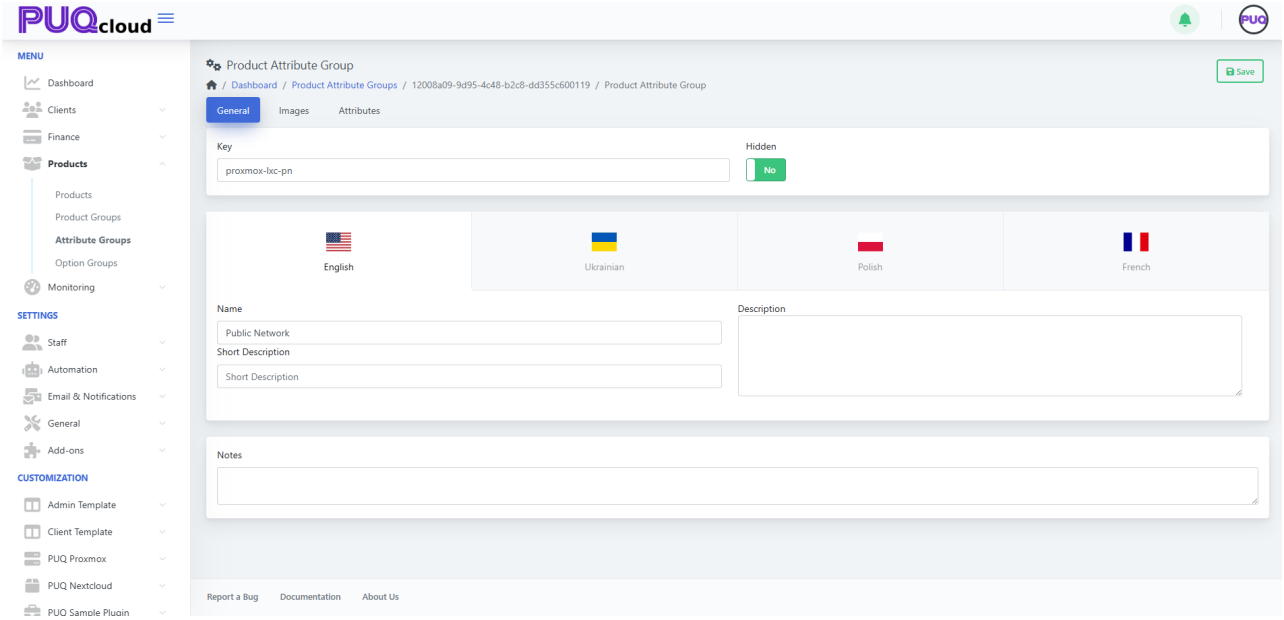

1. Click **+ Create**.
2. Enter a unique **Key** (e.g., `proxmox-lxc-pn`) and **Save**.

Configure the Group

Use the tabs across the top.

General tab

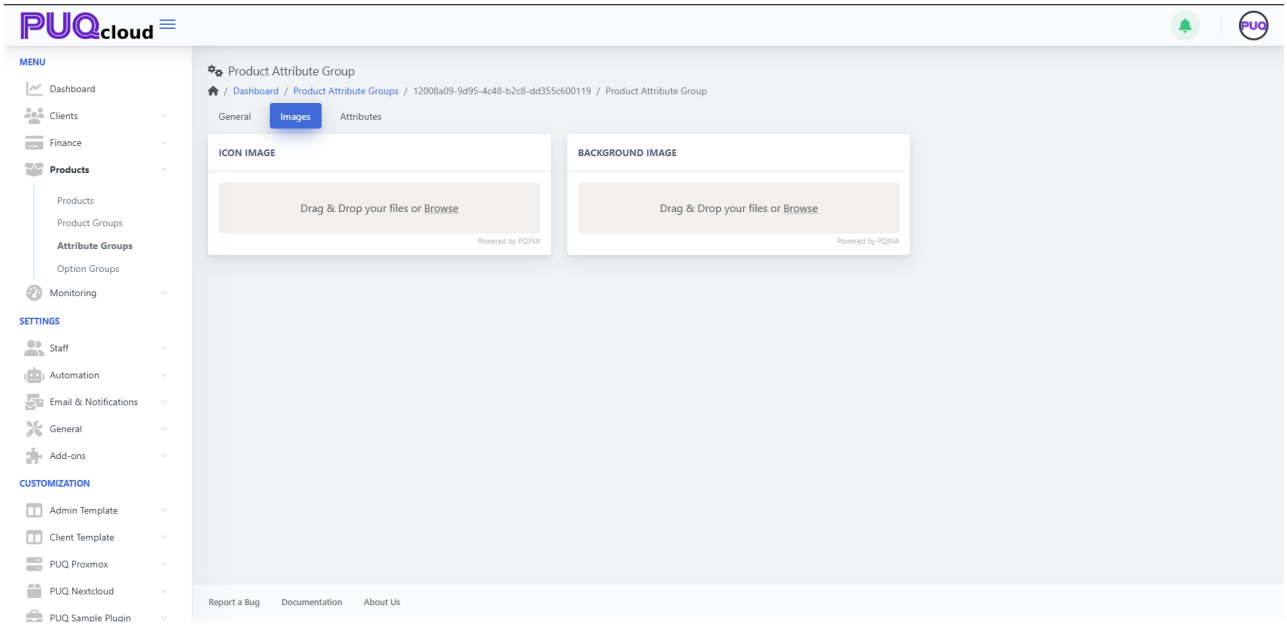

- **Key** — internal identifier (read-only after creation).
- **Hidden** — hide/show the entire group from selection lists.
- **Localized content** — **Name**, **Short Description**, and **Description** per language.
- **Notes** — internal notes for admins.
  Click **Save**.
  (Screenshot: Attribute Group → General tab)

Images tab

Upload visuals representing the group:

- **Icon Image** — small logo used in lists/cards.
- **Background Image** — larger banner image.
  Drag & drop files or **Browse**, then **Save**.
  (Screenshot: Attribute Group → Images tab)

Attributes tab (inside the group)

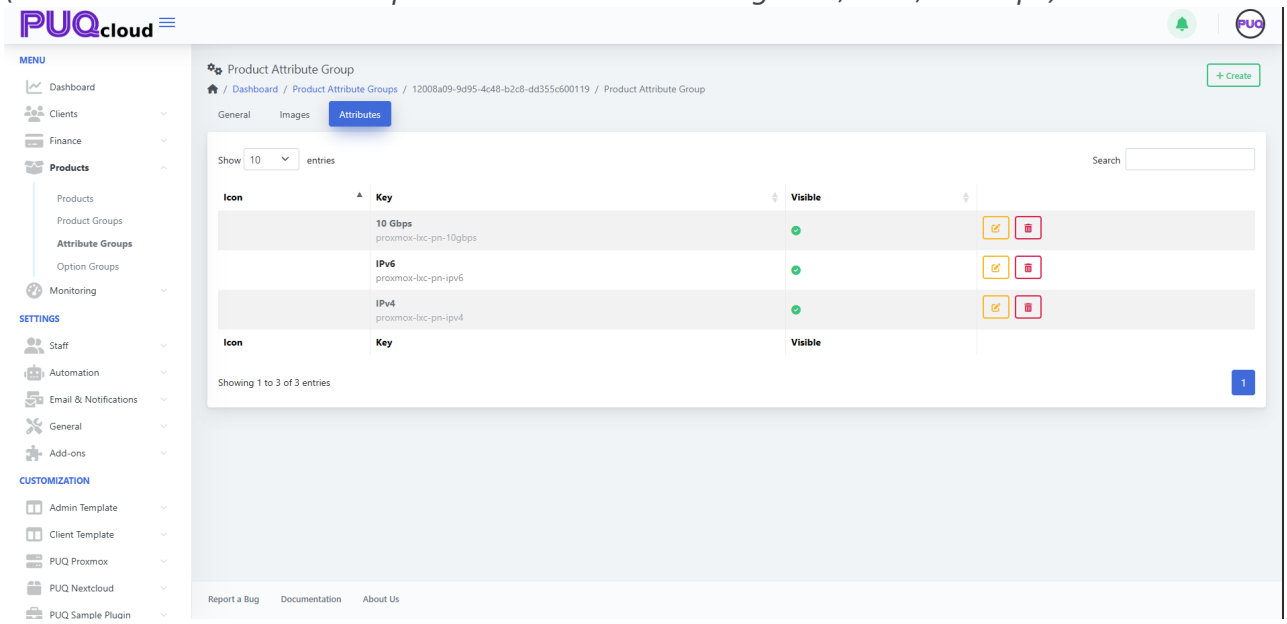

Add and manage the individual attributes that belong to this group.
You'll see columns **Key** and **Visible** with actions **Edit** and **Delete** for each attribute.

Add an attribute

1. Click **+ Create** (top-right while on the group).
2. Fill out the attribute details (e.g., **Key** `proxmox-lxc-pn-ipv6`, Name `IPv6`).
3. Set **Visible** as needed and **Save**.

Edit / Delete

- Use the **Edit** (pencil) or **Delete** (trash) on a row.
  (Screenshot: Attribute Group → Attributes tab showing IPv4, IPv6, 10 Gbps)

Using Attributes in Products

Once your attributes exist, attach them to products.

1. Open **Products → Products**, select a product.
2. Go to the product's **Attributes** tab.
3. Click **+ Add Attribute** and pick from available attributes (they are organized by their groups).
4. **Save** the product.

> Tip: Consistent keys (e.g., `proxmox-lxc-pn-ipv4`) make it easier for modules/automation to reference attributes programmatically.

Best Practices

- **Plan the taxonomy**: create groups by domain (e.g., Networking, Storage, CPU features).
- **Keep keys stable**: avoid renaming keys after products reference them.
- **Localize** names/descriptions so storefronts are consistent across languages.
- **Use visibility** to stage new attributes before making them selectable.

Troubleshooting

- **Attribute not selectable on a product** → Ensure the attribute **exists**, is **Visible**, and you're on the product's **Attributes** tab.
- **Old attribute still appears** → It may be linked on products; unlink from those products before deletion.
- **Module fails expecting a flag** → Verify the attribute **Key** matches what the module/integration expects (case-sensitive).

Screenshot References

- Attribute Groups list page.
- **Create** Attribute Group modal.
- Attribute Group → **General** tab.
- Attribute Group → **Images** tab.
- Attribute Group → **Attributes** tab with items (IPv4, IPv6, 10 Gbps).
