PUQVPNCP WHMCS module

> **Important:** This module works exclusively with **PUQVPNCP** and requires version **2.x or higher** (PUQVPNCP Website | Order PUQVPNCP).

The PUQVPNCP WHMCS module is a provisioning module that integrates WHMCS with PUQVPNCP panels, enabling service providers to offer multi-protocol VPN accounts (WireGuard, AmneziaWG, OpenVPN, IKEv2) to their customers. The module automates the full lifecycle of VPN client management through the PUQVPNCP REST API.

Main features

- **Automatic VPN client provisioning** — creates the client on the chosen PUQVPNCP panel on service activation
- **Account lifecycle management** — create, suspend, unsuspend, terminate and change-package operations
- **Multi-protocol support** — WireGuard, AmneziaWG (censorship-resistant obfuscated WireGuard), OpenVPN and IKEv2, with protocol availability detected automatically per network
- **Configuration delivery** — WireGuard `.conf` + QR code, AmneziaWG `.conf` + QR code (including obfuscation headers/junk packets), OpenVPN `.ovpn` profile and IKEv2 profile, all with Copy/Download buttons in the client area
- **Per-client bandwidth limits** — configure download/upload caps (Mbit/s) per product; `0` means unlimited
- **Speed tiers in one click** — auto-create WHMCS Configurable Options for

download/upload speed (Unlimited → 1000 Mbit/s); customers pick their tier at checkout and upgrade/downgrade anytime, with the new speed applied automatically
- **Welcome email with configs** — optionally email the client their connection details, WireGuard and AmneziaWG config and QR code the instant the account is provisioned; admins can re-send on demand
- **Flexible network selection** — pick one or more VPN networks per product; the module iterates them at provisioning time and uses the first one with a free IP, showing active/disabled protocol badges in the admin settings
- **Traffic statistics** — monthly chart (download/upload per day) with totals, powered by the panel API
- **One-time self-service link (OTL)** — generate a single-use URL that hands the customer every protocol config, QR code and credential on a page that opens only once
- **Admin insight** — service admin tab shows API connection status, remote client state, bandwidth and protocol viewer
- **License verification** — built-in license system with online/offline verification and admin alerts

---

System requirements

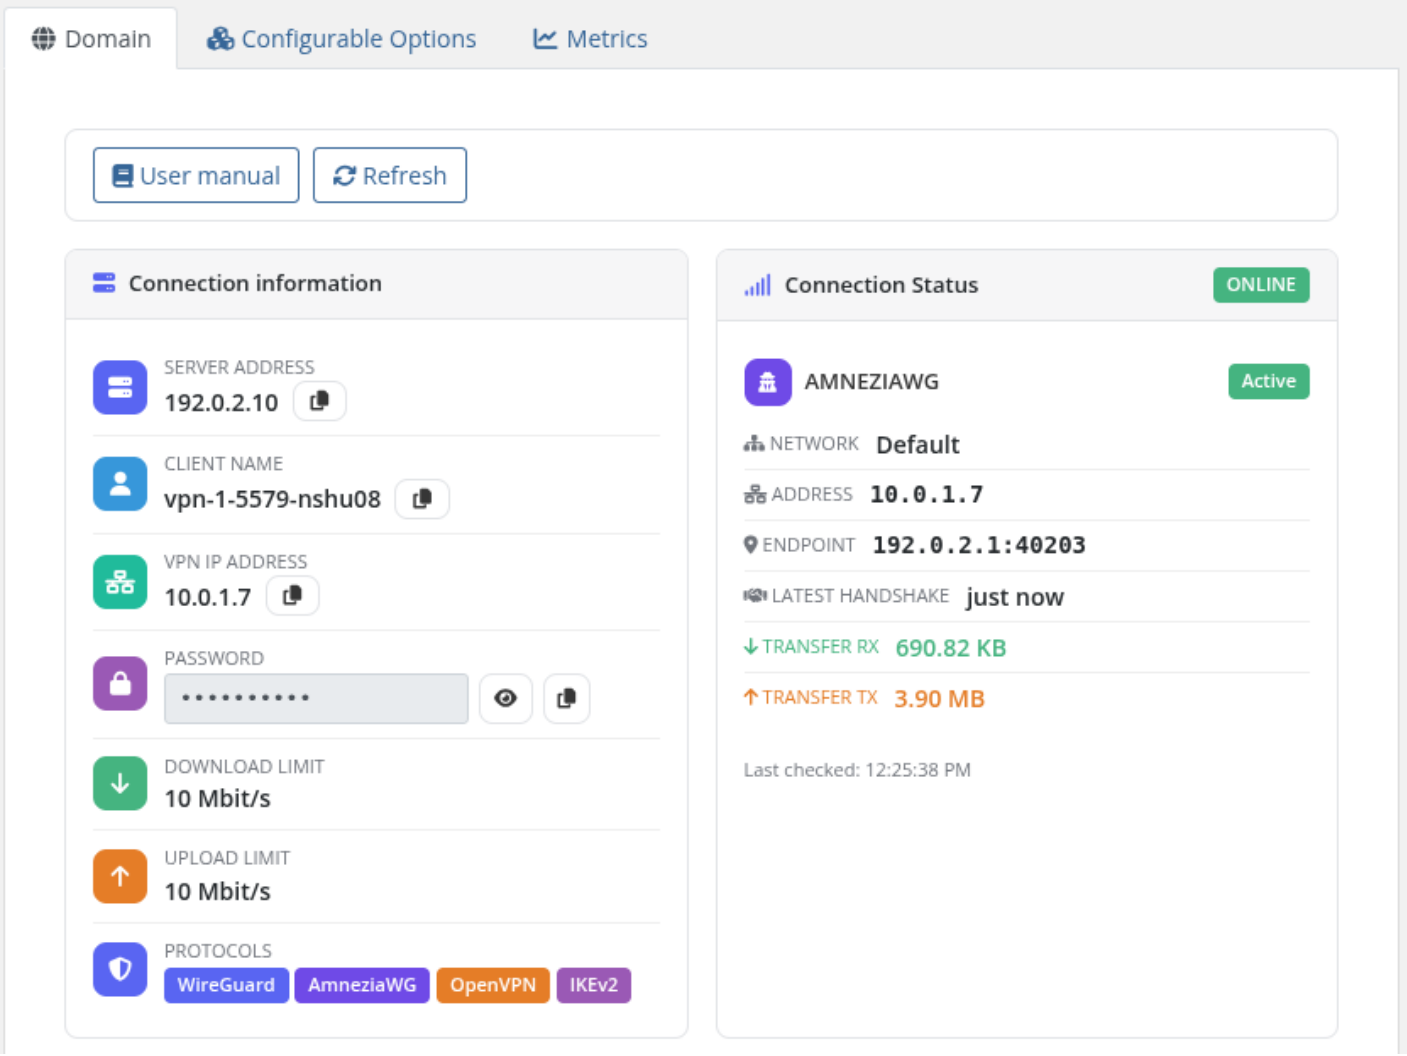

Requirement	Minimum
WHMCS	8.x+, 9.x+.
PHP	7.4, 8.1, 8.2, 8.3, 8.4
ionCube Loader	v15+
PUQVPNCP panel	v2.x and higher
