Email notification

PUQVPNCP module **WHMCS**

Order now | Download | Community | PUQVPNCP | Order PUQVPNCP

The module can send a **welcome email** the moment a VPN account is provisioned, so the customer receives everything needed to connect without opening a ticket.

What the welcome email contains

- **Connection details** — VPN client name, dedicated IP address, username and password
- **Protocol configurations & profiles** — full configuration text for **WireGuard**, **AmneziaWG**, **OpenVPN** (`.ovpn`), and **IKEv2** (filtered dynamically — only protocols enabled on the assigned network are included)
- **Inline QR codes** — high-resolution QR codes for instant mobile camera/client scanning (WireGuard and AmneziaWG)
- **Quick Connect One-Time Link (OTL)** — single-use secure onboarding link opening all configs and QR codes in one tap
- **Setup guides** — direct link to the product manual/instruction page (if configured)
- **Service management button** — direct link to the WHMCS Client Area service details page

Enabling it

Turn it on per product with **Send welcome email after account provisioning** on the *Module Settings* tab, and choose which template to send (the bundled **PUQ VPNcp - Welcome** by default). See Welcome Email for the full setup, including the one-click template creator and the available merge variables.

The template lives in **Setup → Email Templates → Product/Services** and can be edited freely. If it is missing when the first welcome email is due, the module creates it automatically.

Resending on demand

An admin can re-send the welcome email at any time from the service's admin tab — see Email notification (admin). This works even if the per-product auto-send option is disabled.
