Traffic statistics

PUQVPNCP module **WHMCS**

Order now | Download | Community | PUQVPNCP | Order PUQVPNCP

A dedicated page in the client area showing monthly traffic for the VPN client. Entered from the service sidebar via **Traffic statistics** (`action_m=traffic_statistics`).

19-traffic-statistics.png

Controls

- **Year** / **Month** selectors — default to the current month. The Year dropdown lists the last

four years.
- **Load** button — refetches data for the chosen period.

Chart

A line chart rendered with Chart.js showing per-day:

- **Download** (blue line, filled area)
- **Upload** (green line, filled area)

All values are formatted with a human-readable `B / KB / MB / GB / TB` scale on hover and on the Y axis.

Totals

Two cards below the chart show the aggregated total download (blue) and total upload (green) for the selected month.

Data source

The page calls `GET /api/v1/client/{name}/traffic/{year}/{month}` on the PUQVPNCP panel every time **Load** is pressed. The module does not cache samples — values come live from the panel each render.
