16. Backups

Overview

PUQVPNCP provides automatic and manual backup/restore functionality with optional FTP upload for offsite storage.

Backup List

Navigate to **Settings > Backups**.

Backup list with create, restore, download, and delete actions

Each backup includes:

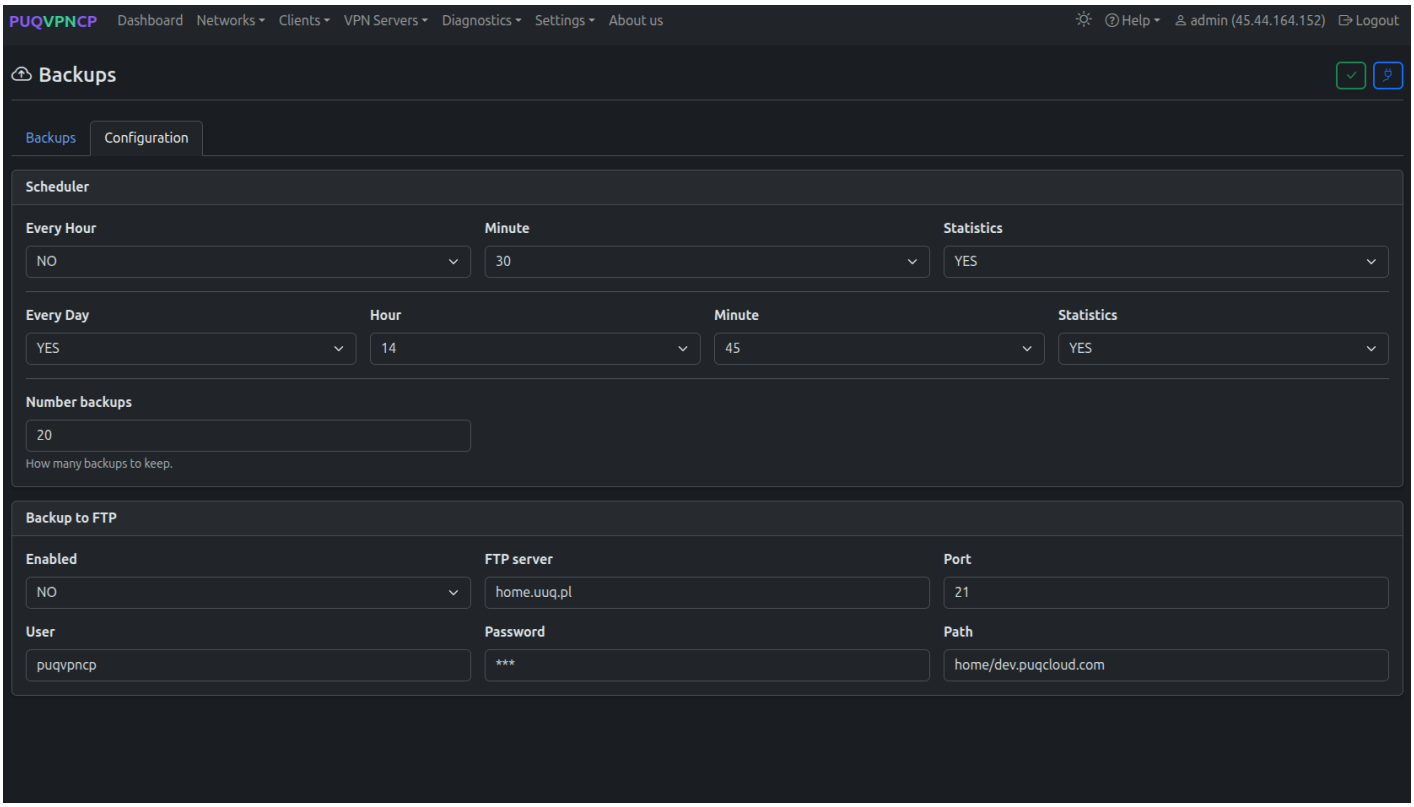

- All network and client configurations
- WireGuard keys, OpenVPN certificates, IKEv2 certificates
- Firewall rules, DNS settings, system configuration

- Traffic statistics data
- User accounts, permissions, API tokens

Actions

Action	Description
Create	Create a new backup immediately
Restore	Restore the server to the backup state
Download	Download the backup archive
Delete	Delete the backup file
Upload	Upload a backup file

Backup Configuration

Backup scheduler configuration

Automatic Backups

Setting	Description

Hourly	Enable/disable hourly backups
Daily	Enable/disable daily backups
Daily time	Time for daily backup (e.g., `14:45`)
Max backups	Maximum number of backups to keep (oldest are deleted)

FTP Backup

Setting	Description
FTP Backup	Enable/disable FTP upload after each backup
FTP Server	FTP server address
FTP Port	FTP port (default: 21)
FTP Username	FTP login
FTP Password	FTP password
FTP Directory	Remote directory for backups

> **Tip:** Use **Test FTP** button to verify the FTP connection before enabling automatic uploads.

Restoring a Backup

1. Go to **Settings > Backups**
2. Click **Restore** on the desired backup
3. Confirm the restore operation
4. The system will reload automatically after restoration

> **Warning:** Restoring a backup overwrites all current configurations and data. Create a backup of the current state before restoring.
