

API Access Hashs

[Order now](#) | [Download](#) | [FAQ](#)

To manage API Access Hashs, go to the section Settings->API

The screenshot shows the PUQVPNCP web interface. The top header includes the logo, a help link, the user name 'ruslan (79.184.10.59)', and a logout button. The sidebar on the left contains links to Dashboard, VPN servers, VPN accounts, Settings, Firewall, DNS, One-time link, System users, API, License, and About us. The main content area is titled 'API Access Hashs' and features a green success message: 'Successfully'. Below this is a form to add new hashes with fields for Name, IP, and an Add button. A message states: 'Everything went well. Please save the hash. It has only been shown once.' Below the message is the generated Access hash and a Copy hash button. A table lists existing hashes with columns for Name, IP, Created data, Last Login, and a Delete button for each row.

Name	IP	Created data	Last Login	
test2	1.1.1.1	2022-11-18T10:38:37+01:00		Delete
TEST	79.184.10.59	2022-11-15T15:23:05+01:00	2022-11-17T09:36:57+01:00	Delete
piotr2	79.184.10.59	2022-11-17T14:26:40+01:00	2022-11-17T14:42:08+01:00	Delete
Piotr	79.184.10.59	2022-11-16T14:23:48+01:00		Delete

You can view/create/delete API Access Hashs.

Accept the fact that once the Access Hashs API is created, it will only be shown once.
Each API Access Hash only works from a specific IP address.

To authorize the API, API Access Hashs must be passed in the http header as the value of the "access_hash" parameter in Cookies.

API Root Link: https://<Your_server>/api/v1/

Application methods:

- **GET** - To get information about an object
- **POST** - Creating a new object
- **PUT** - Edit an existing object
- **DELETE** - Delete an existing object

The data is sent to the server using the POST method.

Response from the server in json format

Each response from the server will have the same structure.

```
{
  "error" : "",
  "msg" : "",
  "status" : ""
}
```

- **STATUS:** if the result is successful then it will be "**SUCCESS**", If the result is not successful it will be "**ERROR**"
- **MSG:** Here are the results of a successful request
- **ERROR:** In case of an error, the error text will appear here.

Here is an example using curl

```
curl \
-b
"access_hash=7effe99173b87e9cdebdab66d6fb23c9b244af250cb09b5dd36d8f80d14a8510b2d00bcba7290252"
\
-X GET https://dev.softkeel.com/api/v1/system/status
```

Response example:

```
{
  "error" : "",
  "msg" : {
    "count_accounts" : 550,
    "count_accounts_available" : 550,
    "count_wireguard" : 100,
    "license" : "2023-11-13T18:38:43+01:00",
    "license_valid" : true,
    "status" : "Loading (Wireguard delete old interfaces)",
    "version" : "1.0"
  },
  "status" : "success"
}
```
