

Create a root certificate

[Order now](#) | [Download](#) | [FAQ](#)

If you already have a root certificate ready, use certificate import. More in the [certificate import instructions](#) section.

Go to menu item **VPN servers -> IKEv2**

ROOT certificate **Certificate not found**
Import ROOT certificate and key

CaCert

CaKey

SERVER certificate info **Certificate not found**

You need to fill in the required fields such as:

- Common name
- Organization

Then click the button **Generate ROOT certificate**

After these steps, the **root certificate and private key** will be generated.
Information about the certificate will be available in the same place.
