

# Import the root certificate

[Order now](#) | [Download](#) | [FAQ](#)

If you don't have a root certificate ready, use the certificate generation option. More in the certificate generation instruction section.

Go to menu item **VPN servers -> IKEv2**

**SERVER certificate info** **Certificate not found**

You need to fill in the fields intended for the root certificate and for the private key

- **CaCert**
- **CaKey**

To import the root certificate and private key, click the **Import ROOT certificate and key** button

After these steps, the **root certificate and private key** will be imported.  
Information about the certificate will be available there.
