

Windows WireGuard client configuration

[Order now](#) | [Download](#) | [FAQ](#)

In order to connect to a VPN, follow these steps:

1. Open the link you received in a browser to get instructions and configuration for your new VPN connection. And you will see the following page in the browser window

2. In order to start the configuration you need to download the configuration file. To

This is a one time link with configuration options

3. Save the file to downloads or any other place to import later.

4. Since we are setting up a connection for an android device, we need the WireGuard client for Windows. To download the client on your device, open the link on your device and click "Download Client Windows"

5. Install the app on your device.

6. This is how the main window of the application looks like, which has no configured connections. To set up a new VPN connection, you must press the "Import tunnel(s) from file" button.

7. Next you will be prompted to find your configuration file. You need to find the configuration file and select it.

8. After you select your configuration file, the connection will be created.

9. Click the "Activate" button. To activate your VPN connection.

10. Congratulations. Your VPN connection is active.

The screenshot shows the WireGuard application interface. At the top, there are tabs for "Tunnels" and "Log". Below the "Tunnels" tab, there is a table with three columns: "Name", "Status", and "Action". The table contains one entry: "wg0" with a green checkmark in the "Status" column and a minus sign in the "Action" column. Below the table, there is a "Log" section with a green checkmark and the text "Interface: wg0 Status: Active".

Name	Status	Action
wg0	Active	-
