Recheck on the Clients page never use the queue.

The queue lives in `|puq_sanctions_checker_queue|` (client, type sanctions/fraud, context, status pending → processing → done/error). The Home page shows the number of pending items; every processed portion is logged (`|queue_processed|`), failures per client are logged as `|check_error|`. Finished rows are purged after 7 days. If the queue table is unavailable, trigger checks automatically fall back to real-time so registration never breaks.

What runs daily

1. **Sanctions lists synchronization** — the enabled OpenSanctions mirrors (EU FSF, Canada DFATD-SEMA) are downloaded and re-imported into the local database. The files are ~2 MB each and the URLs are static, so this is fast and reliable.
2. **Periodic mass check** — when **Periodic mass check (cron)** is set to Daily, Weekly, or Monthly, the module re-screens clients (Active only or all, per the **Clients to check in mass check** setting) once per period — via the queue by default. The last run timestamp is shown on the Home page.

Notes

- Tickets are deduplicated, so a weekly mass check does not spam the helpdesk: a client with an already-open sanctions ticket does not get a second one.
- All cron activity is written to the module **Log** page (`|list_sync|`, `|mass_check|`, `|queue_processed|` events).

Manual equivalents

Everything the cron does can be triggered from the **Home** page: **Sync sanctions lists now** and **Check all clients now** (queued by default; with the queue disabled — realtime batches with a progress bar).
