

Client Area and Invoices

Service Label Designer addon **WHMCS**

[Order now](#) | [Download](#) | [FAQ](#)

This page shows how the module affects the client-facing pages — the services list in the client area and invoice descriptions.

Client Area — Services List

When a group has **Enable in List** checked, all services in that group display the rendered template instead of the default product name + domain format.

View	Showing 1 to 28 of 28 entries			
	Product/Service	Pricing	Next Due Date	Status
<ul style="list-style-type: none"> Active 11 Pending 3 Suspended 0 Terminated 14 Cancelled 0 	<p>ownCloud 1 GB (ownCloud) Domain: N/A User: 1-5410-1769191502 IP: N/A Assigned: N/A Client: Ruslan Polovyi (ruslan.polovyi@puq.pl) Registered: 2025-07-31 Next Due: 2025-10-01 Status: Terminated</p>	\$0.25 Monthly	Wednesday, October 1st, 2025	Terminated

06-client-area.png

The module hooks into the **ClientAreaPage** event (priority 1000) and replaces the service display data for the "My Products & Services" page.

What Gets Replaced

- **Product name** — replaced with the rendered template
- **Domain** — set to a space (hidden) since the template typically includes domain info

Example

With the template:

```
<b>{product-name}</b> / {group-name}<br>
```

Domain: {service-domain} | User: {service-username}

 IP: {service-dedicatedip} | Assigned: {service-assignedips}

 Client: {client-name} ({client-email})

 Registered: {service-regdate} | Next Due: {service-nextduedate} | Status: {service-status}

Each service in the client area shows a rich, multi-line label with all relevant information instead of just the product name.

Invoices

When a group has **Enable in Invoice** checked, the module modifies invoice line item descriptions when a new invoice is created.

Invoice #2007

Mikrotik VPN 10M/10M/10GB -		

07-invoice.png

The module hooks into the **InvoiceCreation** event (priority 1) and processes each invoice line item that has a related service (relid).

Invoice Modes

The behavior depends on the mode selected for each group:

Mode	Result
Append	Original description + newline + rendered template

Mode	Result
Replace	Only the rendered template (original description removed)
Prepend	Rendered template + newline + original description

Example (Append mode)

Original invoice line:

```
Mikrotik VPN 10M/10M/10GB (01/03/2026 - 31/03/2026)
```

With template: `{product-name} ({group-name}) – | User: {service-username} | IP: {service-dedicatedip}`

Result:

```
Mikrotik VPN 10M/10M/10GB (01/03/2026 - 31/03/2026)
Mikrotik VPN 10M/10M/10GB (Mikrotik VPN) – | User: 1-5525 | IP: 192.168.222.2
```

Important Notes

- Invoice text modification happens **only when the invoice is created**. Existing invoices are not affected.
- Only line items with a related service (`relid != 0`) are processed.
- If an error occurs during processing, it is logged via `logModuleCall` and the original description is preserved.

Revision #2
