PUQ Service Label Designer — WHMCS Addon

PUQ Service Label Designer is an addon module for WHMCS that allows you to fully customize how service names and labels are displayed in the client area services list and on invoices. Using per-group templates with dynamic variables, you can create rich, informative service labels that include product names, domains, IPs, client info, custom fields, and more — with full HTML support.

Key Features

- **Per-Group Templates** — configure label templates for each product group separately
- **Client Area Overwrite** — replace default service names in the client area "My Products & Services" list
- **Invoice Text** — add, replace, or prepend custom text to invoice line item descriptions
- **Invoice Modes** — choose per group how invoice text is applied: Append, Replace, or Prepend
- **Dynamic Variables** — use template variables that are replaced with real service data:
  - `{product-name}`, `{group-name}` — product and group names
  - `{service-domain}`, `{service-username}`, `{service-dedicatedip}`, `{service-assignedips}` — service details
  - `{service-id}`, `{service-status}`, `{service-regdate}`, `{service-nextduedate}` — service info
  - `{client-name}`, `{client-email}` — client details

    - `{service-customField-[name]}`, `{service-configOption-[name]}` — custom fields and config options
- **HTML Support** — templates support full HTML for rich formatting (bold, colors, tables, icons, etc.)
- **Default Values** — configure fallback values for empty fields (domain, username, IP, etc.)
- **Live Preview** — preview how your template renders with real service data before saving
- **Export / Import** — export all settings and templates to a JSON file, import on another WHMCS instance
- **Bulk Operations** — enable/disable all groups for List or Invoice in one click
- **Dashboard** — overview with key metrics, enabled groups summary, and live preview of recent services
- **License system** — online/offline license verification with graceful degradation (dashboard remains accessible without a license)
- **English language interface**

System Requirements

Requirement	Minimum
WHMCS	8.x, 9.x
PHP	8.1, 8.2+
ionCube Loader	v13 or newer (v14, v15)
