# Dashboard

## PUQ Web Hosting module **WHMCS**

Order now | Download | Community

The addon **Home** page is a one-glance view of your whole hosting operation.

# Cards

| Card | Shows |
|---|---|
| **Services** | Total provisioned services (View → the Services list). |
| **Servers** | Total servers (Manage → Infrastructure). |
| **Task Queue** | Tasks currently in the queue (View → Logs → Task Queue). |
| **DNS Zones** | Total logical DNS zones (Manage). |

| Card | Shows |
| --- | --- |
| **Server Groups** | Shortcut to group management. |
| **Settings** | Shortcut to cron / retry policy / tables. |

# Panels

- **Server capacity** — every node by **type** (web/mail/dns), its capacity used/max and its **last sync** time. A quick health view of each tier.
- **Recent terminal errors** — services whose deploy terminally failed (so you can act fast). Empty is good.
- **Recent services** — the latest provisioned services with their WHMCS and deploy status.

# Navigation

The top bar is the same everywhere:

- **Home** — this dashboard.
- **Services** — the cross-service admin list (search/filter, open the admin panel, redeploy/verify).
- **Statistics** — per-domain usage (web/mail split).
- **Infrastructure** — Web / Mail / DNS Servers, Server Groups, DNS Zones, DNS Zone Templates.
- **Logs** — Task Queue, Operation Log.
- **Settings** — General, Cron, Vanity widget.
- **Help** — documentation & support links.
