# Order Detail

## WireGuard Business-VPN module **WISECP**

Order now | Download | FAQ

Navigate to the service you want to manage, then go to the '**Core**' tab.

In the opened tab, you have a view of the online status of the service. The available online information includes:

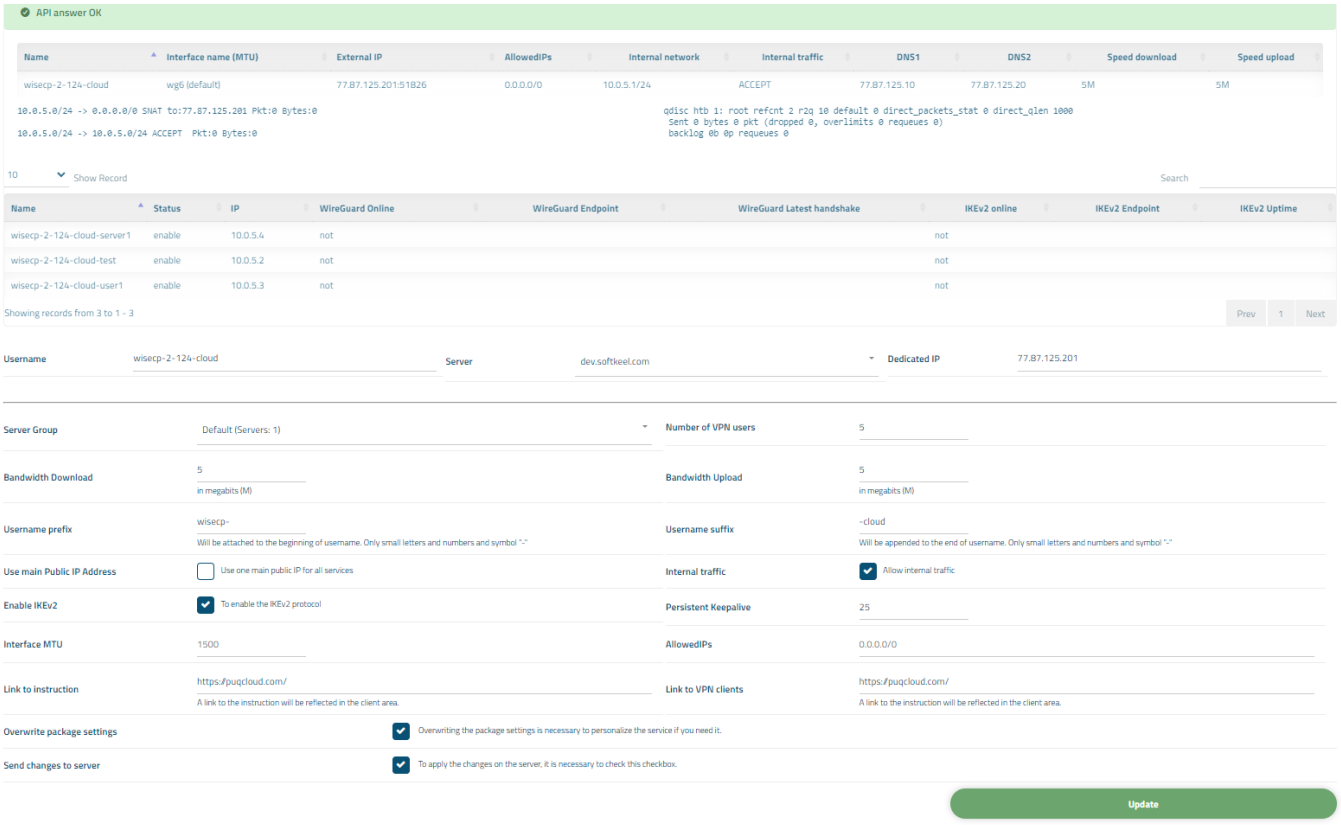

- Connection status to the API
- Information about the VPN accounts on the PUQVPNCP server
- Diagnostic information about the account (online status, firewall rule counters, and so on).

Also, below are fields with the client's personal data, such as Username, Server, and Dedicated IP.

You can also individually override package options for the client by checking the 'Overwrite

package settings' box.

After modifying the configuration options, check the '**Send changes to server**' box to save the data to the PUQVPNCP server.

Note: When changing the Server Group, Server, and WireGuard Server fields, make sure you have a user with the username as specified in the 'Username' field pre-created on the new server. Otherwise, you will need to recreate the service for your client.
